PETERBORO SAW MILLS

A Slabbing Machine of Real Merit

Our No. 1 Twin Circular

Slabs both sides of the log at once

It is the very best machine now made for slabbing for a stock gang or a machine such as our "Kendall" Patent Circular Gang.

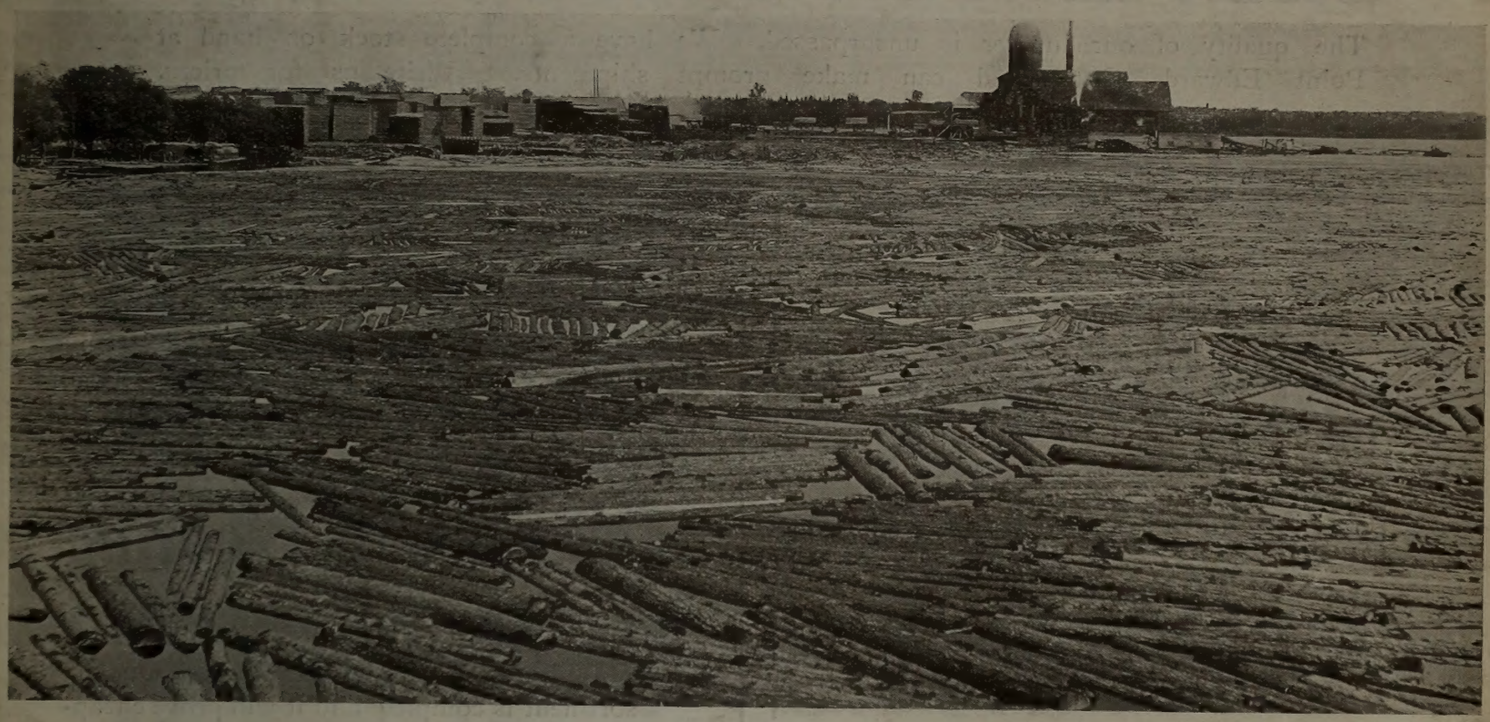
It can be driven by a steam feed as shown or with a rope feed, and it is also made with a continuous chain feed.

Extremely simple and economical to operate.

It will add greatly to the capacity of a mill where such a machine can be used—and the repair bills are practically nothing at all.

Built in two sizes to slab logs of any length into cants from 24 in. to 6 in. and from 16 in. to 4 in.

We can send you a lot of interesting information if you would like to have it.



If you want any machinery for your mill this winter, don't forget that we build it. You will be interested in our prices.

Reliable Veterinary Remedies

No logging outfit is complete without a supply of reliable veterinary remedies. Getting the wrong kind means the loss of the use of your horses when time is valuable.

Johnson's Veterinary Remedies

are guaranteed never to fail when used as directed. You get your money back if they ever do.

They are

Johnson's Horse Liniment No. 1.
A penetrating Alcoholic Liniment. Put up in one gallon jugs, with full directions, per imperial gal. $4.50

Johnson's Horse Liniment No. 2.
A combination of the best oils used as liniments, imp. gallon . $3.00

Johnson's Horse Colic Remedy.
A sure and speedy cure for colic Imperial gallon $5.00

Johnson's Veterinary Healing Ointment.
Positively the best all-round healing ointment made. In use by the largest owners of horse flesh in Canada. Put up in 2 lb tins, each . . $2.25 or in ¼ lb tins, per dozen . . $3.50

Johnson's Condition Powders. (Concentrated).
Put up in bulk, per lb . . . . 30c.

These goods being put up in bulk are more economical than others, as cost of bottling, etc., is saved.

CAMP REMEDIES.

In addition to our Veterinary Remedies we make a line of medicines for lumbermen, including a strong, penetrating liniment, healing ointment, cholera cure, li r pills. cough syrup, in fact anything he form of Camp Drug Supplies. We w that there are no better remedies than those we offer. There may be nearly as good, but they lack our gu tee. Satisfaction or money back. A trade discount of 10% allowed off all orders amounting to $100.

Send postal for printed matter.

No. 83 13-inch and No. 87 12-inch Four Sided Heavy Duty Moulder on Base

It's a good plan to talk quality, but a better one to deliver it

We deliver the Quality in our latest improved Heavy Duty Moulder, without doubt the peer among present Heavy Moulders

This machine, like all the rest of the "Hespeler Line," embodies the best material and highest grade of workmanship, which makes it a favorite with up-to-date mill men.

Note Some of the Strong Points of its Construction:

The Feed is what is known as the down feed, is positive in its action, and has unusual strength, so much so that all ordinary material will pass through the machine without the use of weights on the lever.

The Feed Rolls are 7" in diameter, the upper ones being made up in sections, the pressure being applied directly over the centre, raises and lowers in perfect parrallel, feeding as strong at the outer end of the roll as on the inside. Each machine has eight changes of speed varying from 11' to 50' per minute.

All Gears are cut from the solid, which insures smooth operation and a feed free from vibration.

The Feed Control is by levers, one at the feeding in end of the machine and the other at the side of the table in line with the main spindles, as shown.

The Table or bed is of ample weight and length, cast in one piece, firmly gibbed to the main frame and is supported on two large square thread screws. the thrust of which is taken up on roller bearings, which simplifies the raising and lowering. The table is locked to the frame in three places.

The End Table with bottom head is adjustable on ways, the outer section having another independent adjustment. The end can be swung out of the way for access to the lower knives without disturbing the guides.

The Spindles are all extra large and are made of the best refined steel.

The Bearings on the upper and lower cylinders (three in number in each case) are what is known as the White's patent type, familiar to all users of modern machinery and leaves nothing to be desired.

Our Woodworking Machinery insures adequate returns. No millman can afford to operate his plant with anything but the highest grade tools—provided he desires to retain his trade and secure the greatest profits on his financial outlay.

THE CANADA LUMBERMAN AND WOODWORKER is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworkking factories, pulp mills, etc., THE CANADA LUMBERMAN AND WOODWORKER is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisments.

Vol. 30 Toronto, January 1, 1909 No. 1

Opposition to the Insurance Bill

The lumbermen of Canada have taken up in earnest the campaign against the clause in the new Insurance Act to provide a tax of 15 per cent. on premiums for insurance taken out in unregistered companies. The situation, which has been explained in detail in previous issues of the "Canada Lumberman," is briefly that fire insurance in the lumber mutual companies of the United States, whose rates are mrch lower than the non-specializing companies, will be so taxed, and rendered so burdensome by the necessity of making detailed reports to the Government, that it will be rendered unavailable to Canadian lumbermen. The Canadian Lumbermen's Association are acting vigorously, and in addition to influencing public opinion and seeking to effect the modification of the bill now before the Senate, they are distributing a resolution upon the subject which is being signed by large numbers of interested premium payers. The following is a copy of the resolution, and any who have been overlooked in the distribution by the Association should sign this copy and forward it at once to the secretary of the Association, Carleton Chambers, Ottawa:

Resolution:—"Whereas the proposed Insurance Act now before the Honorable Senate and House of Commons of Canada is calculated to prevent the placing of insurance outside Canada without the payment of an exorbitant tax thereon and the filing of certain unreasonable statements with the Superintendent of Insurance, the failure to comply with which makes the policyholder liable to fine and imprisonment; and

"Whereas none of these restrictions are placed upon the old line or registered companies; and

"Whereas the proposed legislation does not provide for the disallowance or investigation by the Government officials of rates of premium which may be deemed by the insurer to be unreasonable; and

"Whereas, if the proposed legislation become law it will create an absolute monopoly of fire insurance in the whole of Canada.

"Be it therefore:—

"Resolved, that (I or we) unhesitatingly disapprove of the objectionable features referred to in the proposed Act, and humbly pray that the Bill be not now further proceeded with, unless amended in accordance with representations to be made by the 'Committee of Insurance Premium Payers of Canada.'"

Name .....

Address.....

That this action of the Association is not based upon any local objection, but upon a widespread belief in the unfairness of the proposed measure, is evidenced by the interest the matter has evoked in all parts of the country. The subject was discussed in detail at the recent meeting of lumber manufacturers in Vancouver, when a unanimous resolution opposing the measure was adopted after a spirited discussion of the situation. This meeting and the resolution adopted are reported elsewhere in this issue.

The Rondeau Park Trouble

The good intentions of Hon. Frank Cochrane, Minister of Lands, Forests and Mines for Ontario, have apparently been sadly misconstrued by the people of Kent county, or else there has been some miscalculation on the part of the Minister or his staff, in connection with the proposed timber cutting in Rondeau Park. The situation presents a rich field for misunderstandings. In the first place, there are so many interests to consider that somebody is certain to feel that there is ground for criticism. Of the elements which can enter the case to cause trouble: politics, local interest, Government interest and the interest of the lumbermen, to say nothing of the interest of posterity and of the users of the harbor at Erieau and the picknickers who resort to the Reserve, have all to be taken into consideration.

Hon. Frank Cochrane has probably taken into consideration all these interests, and has decided that, after all, there is only one real interest to be guarded—that of the preservation of the park itself, partly as a forest reserve, but more particularly as an interesting and unique museum of forestry, where many of the primeval trees now fast disappearing in other parts of the country, are to be found in stands of considerable numbers. Prof. Zavitz was commissioned by the Minister to examine the park, and, from the point of view of a scientific forester, determine what trees it would be necessary to remove to provide for the successful growth of those which are left. Through long years of undisturbed growth the trees in the park have attained great size. Many of them have long since reached maturity and are, as one might say, "in the sear and yellow leaf." Undergrowth has sprung up, and throughout the whole area of over 5,000 acres the necessity for scientific cutting is apparent.

Prof. Zavitz had not been in the park long before he saw that there was need for far more extensive cutting than was expected. Following out his instructions, he marked the trees which he considered it wise to remove. When he had made a trip of inspection he saw that, according to his own belief, the amount to be cut would be extensive. He proceeded with the marking, and at the request of the Minister he made an interim report. The people of the county were watching the proceedings with jealous eyes lest their park should be injured, and they quickly came to the opinion that far too many of the trees were being marked. Prof. Zavitz, however, is firmly convinced that if the usefulness anh permanence of the park are to be properly preserved, the cutting will have to be increased beyond the amount already marked. He asserts that the amount already marked is only about one-tenth of the amount he would consider neressary. The removal, however, of those already marked, he thinks, will take a long time, possibly exceeding the three years provided for in the conditions of sale. As to the park portion of the reserve, i.e., that portion in which the public are wont to resort for holidaying and picnick, no trees have been marked. The greater part of the timber marked is in the interior portions, where the growth is close and into which the public seldom penetrate.

The concern of the people of Kent county may be overdone, but at least it will serve a good purpose in making it more sure that haste is

made slowly. The Minister, although well seized with the importance of caution, will be doubly anxious to see that no injury is done. He will receive important deputations of those who are fearing injury to the park and, before the sale, will doubtless himself have made a visit to the park and examine closely into the actual conditions. Being a trained forester, his own judgment upon the subject will be of much importance.

The conditions of the sale and the publicity which the matter has received will probably assure that the park will not be injured. According to the conditions of sale, "all cutting and lumbering operations shall be carried on in a proper and economical manner, with the least possible damage to the forest, and in accordance with the directions of an officer of the Department of Lands, Forests and Mines, who shall be in charge of the same." In order to make economical use of the timber, a portable sawmill will have to be erected in the park. The ideal theoretical arrangement for the conduct of the work would be that the cutting should be carried out by the Government itself. But there are too many practical objections to this course to justify it. The main objection is that however careful the Government may be in the management of a business enterprise, practical experience demonstrates that the interests of the public cannot be so well promoted by government management as private. Government employees on such a work are difficult to control in an economical manner, and both loss of money and political interference and wire pulling are so much to be feared that such a plan is usually the last resource to be adopted.

The sale is to take place on January 3rd, and in the meanwhile the Minister's personal inspection of the park and the public interest taken in the matter should be sufficient to assure the people of Kent county that only the most suitable and careful methods will be adopted.

The Importance of Guarding Northern Timber Resources

The lumber industry of Canada has an advantage, in its extensive untouched timber resources which it would be impossible to overestimate. While the resources which have already been worked are enormous, that which remains is so extensive that it forms one of the most valuable assets of the country. While studying to make the best use of the timber which is being cut for to-day's requirements, it is essential, therefore, to take the best possible care of that which is to be cut in the future. Much of Canada's most valuable timber resources are in the great northern country between Hudson Bay and the Rockies, to the north of the Saskatchewan river. The district extends about 1,000 miles east and west, by some 300 to 600 miles (averaging 400 miles) north and south, all of which is more or less forested. "If the forests of this great region, so absolutely necessary to a northern district, a great portion of which is not even provided with coal, are to be preserved, an appropriation sufficient to provide an efficient and comprehensive patrol must be given, and the interests involved would thoroughly justify the expenditure." These words are used by Mr. R. H. Campbell, Dominion Superintendent of Forestry, in regard to this region, and form part of his contribution to the report of the Department of the Interior, lately laid before Parliament.

Steps have already been taken for the patrol of part of the region, rangers having, in 1908, been kept on the Athabaska, Lesser Slave, Peace and Great Slave rivers, in the region north of The Pas, Sask., and in the country north of Prince Albert, Sask., including the Lac la Ronge district, the scene of the mining excitement. Some of the most important points and routes of travel, however, remain unprotected, such as the whole district surrounding and north of Lake Winnipeg as far as Hudson Bay, the whole valley of the Churchill river and a great part of the Peace and Mackenzie river districts.

Fire notices have been printed in Cree and Chipewyan for distribution in the north. A special patrol was maintained along the route of the G.T.P., with the result that no serious fires occurred. Similar precautions need to be observed on the many other railway lines projected in the northern country.

The importance attached to this branch of the work by the Forestry Branch is shown by the increase in the number of fire rangers from 47 in 1907 to 82 in 1908; these rangers patrol their respective districts, discover and extinguish fires and warn travellers and residents of the danger of setting or neglecting fires. Few serious fires occurred on Dominion lands in spite of the dryness of the season and the consequent risk. The most serious fires were at Salmon Arm, Manson Creek and White Lake, in British Columbia, and in the valley of the Spray river in Alberta.

For the British Columbia fires, squatters on timber berths were chiefly responsible and in one case carelessness on the part of a lumber company was a partial cause For the Spray valley fire the carelessness of tourists was responsible. By the British Columbia fires 200,000 feet, board measure, of timber were destroyed and 10,000,000 feet damaged.

There is the greatest need for a survey of this northern forest belt, to say nothing of its protection from fire. An exploration of this tract, similar to the exploration of northern Ontario made in 1900 by the Government of that province, could, Mr. Campbell states, be made for $200,000, an amount which, spread over ten years, would mean an annual expenditure of $20,000. Some of the main lines of travel through the country are well known, it is true, but large areas are entirely unknown, particularly away from these routes, and in order to secure adequate knowledge upon which to base proper administration of the country definite knowledge of it is essential.

On the forest reserves timber surveys were continued during 1908 and plans of administration for the reserves are now being prepared in accordance with the results of these surveys. Fire and careless cutting have resulted in the deterioration of the reserves, and a long period of management will be required to bring them back into proper condition. Of the whole area of 10,000,000 acres comprised in the reserves, about 1,250,000 acres have been surveyed.

Quebec's Wise Action in Regard to Pulpwood Export

The intention of the Government of Quebec to prevent the export of pulpwood may be considered as definitely settled. Several announcements more or less definite have already been made upon the subject, and Hon. Jules Allard, Minister of Lands and Forests in the Gouin Administration, now states that: "The Government of Quebec will prohibit the exportation of pulpwood as a protection to the people of our own province. We will simply say that we have no more wood to sell to foreign countries, and that is all there is to it. It is merely looking after the interests of our people first. With our millions of undeveloped horse power and limitless forests, we think that we can look after our own interests."

This decision will be greeted with approval by all who are interested in the rational development of the resources of the country. It is based upon two sound principles of economy; first, the encouragement of Canadian industry, and, second, the preservation of the Canadian forest resources from destruction in the interest largely of foreign capital.

All that the Province of Quebec or any other province can do in this direction is to prohibit the export of pulpwood which has been cut from its Crown lands. If a measure were mooted to prohibit also the export of wood cut from privately owned lands, it would have to be fathered by the Dominion Parliament and apply to the whole country. Desirable as such a measure might be from many points of view, it might take a long time to persuade the Government to adopt it, unless extraordinary circumstances should arise, such, for instance, as the enforcing of the maximum clause of the United States tariff against Canadian lumber and paper. Such a contingency is fortunately remote and has been made more improbable than ever by President Taft's recent peaceable announcement upon the subject.

In regard to the Crown lands, however, the situation is different, the provinces having the power to stipulate, when leasing these lands to timber operators, that they must not sell the wood outside of Canada until it has been turned into a manufactured article. That the necessity

and the wisdom of taking such action is generally appreciated is evidenced by the course of events in Ontario, British Columbia, Quebec and New Brunswick. In Ontario, a measure was passed in 1897 requiring logs cut on Crown lands to be sawn in the province. This measure resulted in the lumber industry of Ontario receiving a great stimulus. British Columbia only allows the exportation of certain grades of logs upon rare occasions, when the supply becomes too great and the logs in the water are threatened with destruction by marine borers. Quebes, as stated above, has now decided to prohibit the export of its pulpwood logs, and New Brunswick is considering seriously the adoption of a similar measure.

In all quarters apparently the sentiment is growing in favor of a more rigid retention of the natural resources of Canada for the benefit of its own people. That Quebec is wise in adopting this policy is indicated forcibly by the increasing demand for pulpwood and wood pulp in the United States. This increasing demand is a result of the increasing use of paper and the decreasing pulpwood resources of that country. Canadians have no inclination to penalize the United States because of their lack of pulpwood, but naturally enough Canadians prefer, instead of selling to the United States, pulpwood at $6 or $7 a cord, to provide them with wood pulp at $20 a cord, or fibre at $30 to $32 per cord of wood consumed, or better still, paper at $40 to $45 and up, per cord of wood consumed. Even if wood pulp were sent to the States instead of pulpwood, the benefit to Canadians would be extensive, as will be seen from the statistics of the growth in imports of wood pulp by that country since 1880. In 1880 only $5,000 worth was imported; by 1890 this value had increased to $1,800,000; by 1900 to $2,400,000, and in 1908, wood pulp to the value of $7,000,000 was imported.

The Act to prohibit the export of pulpwood from Quebec Crown lands will not come into force any too soon. A further indication of its necessity is afforded by the situation to-day along the lower St. Lawrence, where all the available pulpwood limits are gradually passing into the hands of American capitalists. The activity on these limits during the present winter will be great, so that as much pulpwood as possible may be taken out and sent to United States mills before the prohibition is enforced. All this wood will go out of Quebec as raw material worth $6 to $7 a cord, whereas if the measure were now in force it would be worth as paper $40 to $45 per cord of wood consumed.

Exports of Canadian Lumber Reflect Improved Trade Conditions

The monthly statistics published by the Dominion Department of Trade and Commerce show that the expansion in the lumber business, as indicated by the exports of wood and manufactures of wood, has kept the pace set up already since the spring of 1909 and that in the month of September an even better pace was made. The total exports were greater than those of any other class of natural produce and the increase over the same month of 1908 was more than 50 per cent. The reduction in the duty upon lumber entering the United States has apparently been beneficial to Canadian manufacturers. Inasmuch as the tariff came into effect on August 5th, the month of September was the first during which the effect of the tariff was to be appreciated in its entirety. Exports of unmanufactured lumber to the United States during September, 1909, amounted in value to $4,287,182, against $2,803,014 in September, 1908. In August, 1909, the value was $3,651,459, so that the increase for September under the new tariff was $1,484,167. As compared with August, 1909, during most of which the new tariff was in force, but during which there had been little time for adjustment to the new conditions, the increase was $635,723.

Exports of forest products to all countries for the month of September, 1909, amounted in value to $6,183,648, against $3,982,984 in 1908, and $5,979,198 in 1907. This is the largest total for September on record. The exports of forest products moreover were greater than those of any other class. Next to forest products for September came animal produce, the value of which was $5,966,948. The total exports of Canadian produce of all kinds in September, 1909, were valued at $23,548,330, against $19,993,430 in September, 1908. The increase was, therefore, $3,554,900. The increase in the exports of forest products being valued at $2,200,664, shows that about two-thirds of the increase in all exports was due to the increase in the exports of lumber. Including the export of home and foreign forest products, the total value for September, 1909, was $6,196,988, against $3,983,108 in September, 1908. Exports of foreign forest products were valued at $13,340.

For the six months ending with September the exports of forest products in 1909 were valued at $26,985,491, against $21,844,231 during the same period in 1908. Exports of animal produce were the only ones to exceed forest products, amounting to $29,026,175. Including foreign forest produce the exports for the six months were valued at $27,093,542 in 1909 and $21,976,812 in 1908.

Exports of forest products as given by the Trade and Commerce Department include exports of unmanufactured wood and of ashes. The exports of unmanufactured wood amounted in value during September, 1909, to $6,172,280, against $3,969,982 in September, 1908. In August, 1909, the exports of unmanufactured wood were valued at $6,031,621. For the six months ending with September the values of unmanufactured wood exported were $26,937,222 in 1909; $21,793,170 in 1908, and $26,062,086 in 1907. In manufactured wood, which includes furniture, doors, sashes, blinds, matches, match splints and wood pulp, the exports for September, 1909, were valued at $533,195, against $457,356 in September, 1908. For the six months the value of exports of manufactured wood was $2,576,780 in 1909; $2,264,374 in 1908, and $2,510,544 in 1907.

The Trade and Navigation report for the month of October is also to hand and shows a decline in exports of forest products as compared with September, but an increase of $1,219,714. The total exports of forest products for October were valued at $5,291,442. During the seven months ending with October the exports of forest products were valued at $32,276,933, against $25,915,959; an increase of $6,360,974 for the period. During the seven months the exports of forest products ranked second, being exceeded only by those classed as manufactures, which totalled $33,383,888.

Time to Prohibit the Indiscriminate Cutting of Christmas Trees

The great demand for Christmas trees in the United States has formerly been satisfied by the supplies grown in that country, but this year the waning supply in the United States created a demand for the young Canadian spruce, which resulted in thousands of these valuable trees being destroyed to satisfy the sentiment of a day. It is high time to look into this matter carefully. The slaughter of the young trees involves a great waste of valuable timber which in the course of years would be many times more valuable if allowed to reach maturity. The very fact that the State of New York has found it necessary to import large quantities of Christmas trees should be a warning to Canada. The destruction of the pulpwood resources of the northern States has been in no small measure hastened by the Christmas tree trade. In the city of New York alone, from 100 to 120 carloads of young spruce trees are consumed each Christmas season. The United States Bureau of Forestry has put a ban upon the cutting of small spruce trees in certain localities. The Provincial Governments of Canada should adopt some similar measure, as the demand in Canada alone for Christmas trees is very large, and if supplemented by the demand from the United States it would reach dangerous proportions. Even the balsam trees should be protected, as they are by no means so worthless as some people imagine. Balsam lumber is coming into fairly general use and as a pulpwood, balsam can be mixed with spruce in about the proportion of 1 in 4 without fear of gumming the rollers of the pulp machinery. Apparently a small matter, this demand of a few days only has already obtained serious enough proportions to require attention. A large amount of money is devoted annually to methods for preserving our timber resources from the ravages of fire, of destructive diseases, and of wasteful manufacturing. By saving young spruce trees, very direct results could be obtained.

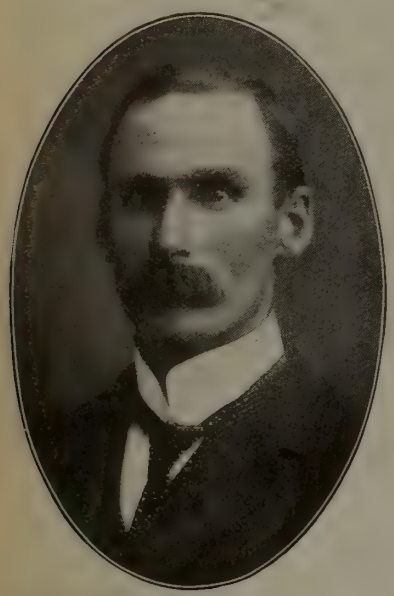
Enterprise in Woodworking at Huntsville, Ontario

Development of the Business of the Muskoka Wood Manufacturing Company—Modern Equipment and Enerergetic Methods bring Rapidly Increasing Trade

How much Huntsville, Ont., owes to her woodworking industries will never be fully estimated until the history of the town is written and the tale is told of its remarkable progress from a primitive little village of but a few years ago, to its present proud position as one of the most important commercial centres in northern Ontario. Nature has had no small share in shaping the destinies of the town, for had the location been chosen with less regard for the convenience of inland commerce, it is not probable that the important status to which Huntsville has risen could have been achieved.

Nestling reposefully at the foot of the great Fairy Mountain, with her manufacturing properties occupying strategic positions on the shores of the beautiful bay, and with the Muskoka river taking its peaceful course through the heart of the town, Huntsville has just reason to claim that no town of similar size in Canada can boast of greater natural beauty, and few of more advantageous prospects for the manufacture of woodenware.

The object of this article, however, is more to bring to the attention of readers of the "Canada Lumberman" the development and importance of one of the chief industries of the town of Huntsville.



It was back in the 90's that a small factory, fitted with woodworking and iron repairing machinery, was erected on King William street, and operated for two or three years under conditions which gave little promise of any marked future growth. The product was chiefly confined to broom handles, and so meagre was the output that the markets were not reached advantageously.

Early in 1901 the factory and equipment were purchased by Messrs. Hanna & Hutcheson Bros., a mercantile firm in Huntsville, and a successful effort was made to enlarge the output. It was not long before the possibilities of much larger business with extended range of output were conceived, and in March, 1902, with a splendid site secured on the shore of Hunter's Bay, with lake frontage and piling yard occupying about 15 acres, the firm was enlarged and incorporated under the name of the Muskoka Wood Manufacturing Company, Limited.

The company immediately proceeded with the erection of a large and modernly equipped sawmill, and a factory for the manufacture of flooring, handles, dowels, chair parts and other articles of woodenware. It would be difficult to find in Canada a site better calculated to contribute to the ease and convenience of handling the product of the forest. By navigable lakes and rivers the company are enabled to bring logs from their own limits at a minimum of cost, and place the finished product on railway cars or boats without moving off their own premises. The main line of the Grand Trunk Railway is their eastern boundary, and two main switches, as well as seven spurs, run through their yards, affording every convenience for prompt loading and shipping.

The plant has been greatly enlarged and improved. The floor space of the factory has been doubled and the addition of huge dry kilns, storage sheds and improved equipment throughout the mill and factory have enabled the company practically to double their capacity within the past two years.

Some idea of the variety and volume of the business may be gained

R. J. Hutcheson,
President and Managing Director Muskoka Wood Mfg. Co.

W. E. Hutcheson,
ice-President Muskoka Wood Mfg Co.

T. S. Parkinson,
Secretary-Treasurer Muskoka Wood Mfg. Co.

Geo. Bushfield,
Superintendent of Factory, Muskoka Wood Mfg. Co.

Muskoka Wood Mfg. Co.'s Mill—View from Yard.

One of Muskoka Wood Mfg. Co.'s Switches in the Yard.

from the following figures, which represent the annual output of the mill and factory:

Lumber, pine, hemlock, mill stuff, hardwood and spruce, 6,000,000 feet; dressed softwood lumber and dressing in transit, 3,000,000 feet; hardwood flooring, 2,500,000 feet; lath, 2,000,000. The product of their manufactury also includes curtain poles, handles, dowels, chair parts, etc., cedar telephone and telegraph poles, cordwood and hemlock tan bark.

The company's power plant is a solid brick structure 40 feet x 40

Muskoka Wood Mfg. Co.—View of Lumber Yard and Railway Switches from the Mill.

feet. The boilers, manufactured by the Waterous Company, carry 125 pounds of steam per square inch. The power developed is about 400 horse power, and is furnished by two Waterous high pressure engines and one John Inglis automatic compound engine. Power to the factory is transmitted by Dodge Manufacturing Company's rope drive. Electric light is furnished by a Westinghouse generator and extends to all parts of the plant.

The fire fighting equipment consists of a Northey duplex pump and the municipal water main, on which there is a pressure of 100 pounds to the square inch. Hydrants, with hose attached, are placed to reach all parts of the yard and plant, and standpipes with hose attached are on each floor.

Sheldon & Sheldon fans, with connections to each machine for removal of dust, shavings, etc., with endless chains for the removal of cuttings and refuse material, keep the plant clean at all times. The dry kilns, one blast and one natural draft, have a holding capacity of 150,000 feet at one time, or about 7,000,000 feet of air dried lumber annually. The plant during the winter months is heated by a Sturtevant blast fan using exhaust steam.

The sawmill is equipped with machinery from the Waterous and

Bird's Eye View of Muskoka Wood Mfg. Co.'s Plant.

William Hamilton plants throughout. One circular with capacity of 40,000 to 50,000 feet per day, 10-inch steam feed, nigger, log loader and kicker, double edger, trimmers, overhead slash table, live rolls and all modern equipment.

The company carry a stock of from 2,000,000 to 6,000,000 feet of lumber in their yard, and from 300,000 to 500,000 feet of hardwood flooring in the storehouse.

In the production of their "Red Deer Brand" kiln dried hardwood flooring the company use the latest approved machinery of American and Canadian manufacture. Their kiln dried product is all jointed, end matched, steel polished, bored for secret nailing, and bundled. This line of flooring is now sold all over the Dominion, from Halifax to Victoria, and a considerable quantity is exported to the British Isles. Its popularity is attested by largely increased sales. Birch enters principally into the manufacture of their 13-16 flooring, and from birch and maple of this one thickness alone, they manufacture about 2,500,000 feet each year. Oak is also used in limited quantities. Their standard widths are $1\frac{1}{2}$, $1\frac{3}{4}$, 2, $2\frac{1}{2}$, 3 and $2\frac{1}{2}$ inches. The thicknesses are $\frac{3}{8}$, $\frac{5}{8}$, 13-16, and $1\frac{1}{8}$ inches. The birch of Muskoka and Parry Sound is, they claim, the best on the American continent.

By a long and intimate association with the districts of Muskoka and Parry Sound, the resident members of the company have been able to make many advantageous purchases of timber lots, and are now supplying a large portion of the timber demand from their own lots. The purchases of the company also include a large amount of timber from the settlers, most of which is delivered on the shores of lakes or rivers which form part of the chain of waterways leading to their plant. The bird's eye view of the plant shows to the left of the railway the mill, factory, storehouse, a portion of the lumber yards and the offices. Along the water front are shown the company's tug and about 2,000,000 feet of logs in a boom, ready to be manufactured.

The officers and directors of the company are: R. J. Hutcheson and W. E. Hutcheson, of Huntsville; William Hanna, of Port Carling, Muskoka; Dr. W. L. Hilliard, Waterloo, and Dr. J. A. Hilliard, Berlin, with T. S. Parkinson, Huntsville, secretary-treasurer.

Mr. R. J. Hutcheson is president and managing director. His businesslike management of the extensive affairs of the company has been largely responsible for the position it occupies among the prominent woodworking establishments of the province. He organized the company and has been successful in his choice of lieutenants, having manned the important positions with competent men, who have contributed in no small measure to the success of his management.

Mr. Geo. Bushfield has been superintendent of the factory for the past four years, and under his supervision the output has increased to its present standing.

Mr. T. S. Parkinson, secretary and treasurer of the company, was born in Thedford, where his father, Thos. Parkinson, banker, now resides. He has proved his ability as an expert accountant. Mr. Parkinson attended the Chatham Business College, where he received a medal for rapid calculation, and after receiving his diploma was employed with Messrs. Hanna & Hutcheson Bros., of Huntsville, where his ability secured for him the responsible position which he has held for the past six years. The company employ the year round an average of about 125 men.

Sayward Mills Sold to Michigan Company

The mills and entire timber holdings of Mr. Joseph Sayward, of Victoria, B.C., have been transferred to the Michigan & Puget Sound Lumber Company, the consideration being in the neighborhood of $900,000. Included in the transfer are some 5,000 acres of Crown granted timber and between 15,000 and 20,000 acres of leased timber upon the island or mainland. The purchasing company includes in its membership E. B. Cadwell, C. S. Phelps, Orla B. Taylor, E. B. Moore and one other gentleman, all of whom are millionaire lumbermen of Michigan.

The company intend to extend the scope of operations of the present building and to practically rebuild the mill. The output of the mill will be increased from its present capacity of about 15,000,000 feet to 50,000,000 feet a year, and the new structure and plant will be thoroughly modern.

The Importers' & Merchants' section of the Liverpool, Eng., Timber Trades Association propose that in future contracts the following clause shall be inserted: "It is hereby mutually agreed that should the wood herein contracted for arrive and be decided by arbitration to be 10 per cent. or more inferior in quality to what this contract stipulates for, the buyer shall in such case have the right to reject the goods absolutely. It is furthermore agreed that any award made by arbitration is hereby guaranteed by the selling brokers. Also, in the case of rejection the selling brokers to be responsible for the return of the cash or acceptance paid in exchange for the shipping documents."

S. O. Fisher, of Bay City, Mich., who has been operating in the Georgian bay district of Ontario for several years, returned from a visit to that region recently. Last year he lumbered about 20,000,000 feet, but says he is through in that district as the cost of getting the logs to the mills is so excessive that only the very best grades can be manufactured without a loss. Mr. Fisher has disposed of his Georgian bay holdings.

Western Lumbermen meet in Conference at Vancouver

Influential Gathering of Manufacturers to Discuss Timely Subjects—Odd Lengths, Insurance Bill and Tariff Dealt with—An Enjoyable Banquet

The convention of western lumbermen held in Vancouver on Dec. 10th and 11th will undoubtedly be recorded as the most influential gathering in the interests of the lumber business that has yet been held west of the Great Lakes. It had its inception in the strong desire of the coast men to have a heart-to-heart talk with the prairie and mountain manufacturers regarding matters of live import at the present time. Heretofore it had been the custom for two or three coast delegates to attend at intervals meetings of the Mountain Mills Association at Nelson, and for one or more members of the latter body to put in an appearance occasionally at the conferences of the coast manufacturers, the result being that whilst both associations admit a community of interests and aims, there was a lack of complete understanding, and the bonds of union were so slender at times as to be almost indiscernible. In consequence of the work accomplished at the convention, and the better understanding arrived at between the individual members of the two associations, future relations will be of the most amicable nature.

So successful was the convention that it was practically decided to make the conference an annual affair. The discussion on market conditions on Friday morning and afternoon made it plain that the outlook for the lumber industry in all its branches next year is exceedingly bright. A number of amendments to the price lists were recommended, but these, if carried into effect, will not involve any material advances. A resolution was adopted to have informal delegates attend the meetings of the two British Columbia conventions in order to discuss general trade conditions from time to time.

Mr. A. D. McRae's Optimistic Address

At the opening of the convention the delegates received a welcome from President J. E. Tucker and Secretary R. H. H. Alexander, of the British Columbia Lumber & Shingle Association. Mr. A. D. McRae, president of the Fraser River Lumber Company, Limited, delivered an address dealing with the rapid growth of the western immigration movement and what the ever increasing area of the grain fields meant to the men who turned the timber of the provinces into homes. In the course of his remarks Mr. McRae said:

"The Canadian Northern will build in 1910, 700 miles of railway in the provinces of Saskatchewan and Alberta, exclusive of the main line to the coast. The C.P.R. and G T.P. together will build as much more mileage in the way of branch lines, making 1,400 miles in all. This railway construction will place in 1910, 120 new towns on the map, all wanting lumber.

"These towns should average two retail yards or 240 yards in all. An initial stock of 20 cars for each yard would be very moderate, which would make a total initial requirement of 100,000,000 feet. An immigration of 200,000 next year means an increase of 15 per cent. in the population of the prairie provinces. The partial crop failures of 1907 and 1908, together with the panic and the curtailment of credit, have deferred needed building improvements for two years. And now, with credit again normal, obligations liquidated and the proceeds of the bumper crop of 1909 available, the sod house of the settler will be replaced by frame, the pole or brush barn will also disappear, municipal improvements such as the building of bridges and schools will take place, cities will grow up to keep pace with the development of the country, and 1910 will usher in the greatest building era ever seen in western Canada.

"With the improvements in domestic markets, foreign conditions will improve and the demand for coast lumber from far away countries will take much of the product that would otherwise find its way to our prairies. The certainty of improved conditions in the United States will also relieve us of that competition. We are undoubtedly approaching the time when, owing to immigration and subsequent development, the demand for lumber has again equalled the capacity of the mills. The price of our product rests entirely with ourselves."

The Fire Insurance Bill

The first important discussion was opened by Mr. A. D. McRae, Fraser Mills, and was upon the subject of the proposed fire insurance bill which has been passed by the House of Commons and will soon be dealt with by the Senate Mr. McRae explained the difference between manufacturers and insurance companies. Manufacturers created, but insurance companies simply conducted insurance business, and, apart from the small commission which went to the agent, the balance went to the head of the business. The disposition of manufacturers was to absolutely oppose legislation or anything that afforded the resident company protection from outside insurance. They might as well recognize that they were going to get insurance legislation, and he thought it was better to have a compromise bill, which would perhaps cost a little more, and be preferable to the legislation now before the house. There was a well organized insurance trust, and they must meet it with some proposal. The board companies wanted to shut out outside insurance companies almost entirely. The 15 per cent. tax would be practically prohibitive, and place them almost entirely in the hands of one organization.

Mr. Otto Lachmund made a few remarks, in the course of which he stated that insurance in the United States was considerably cheaper than in Canada. Canada could not ship lumber to the United States without a duty, but the United States could ship into Canada without. This was not a matter which affected lumbermen alone. He believed 90 per cent. of all who insured would protest against such legislation.

Mr. R. H. H. Alexander protested against the right of the individual to do business where he saw fit, being interfered with. He thought they should fight that matter to the last ditch. It was a fight against a cast iron combine, which was trying to stifle competition. He presented the following resolution:

"Whereas a number of insurance companies in Canada, banded together in a cast iron combine to prevent competition in rates, which, through the operation of this combine are unnecessarily high, are making persistent attempts to obtain legislation, which, though ostensibly for the benefit of the insured, is in reality to force parties insuring to pay these rates and to deprive them of the right to contract for their insurance elsewhere than in Canada, which can be done at lower rates than insisted on by the aforesaid combination; and whereas such legislation would be onerous and detrimental to those engaged in the lumbering industry, this convention of lumbermen, representative from the provinces of British Columbia, Alberta, Saskatchewan, Manitoba and Ontario, unanimously protests against the legislation asked for, resolves that it is against the best interests of those it is suppoed to benefit, and would add to the burden of an industry which does not receive the full measure of protection it is entitled to; and further, that no tax should be imposed on the execution of the hitherto inalienable right to make contracts with any one wherever residing and for any and all legitimate purposes."

Mr. A. D. McRae seconded the motion and after some further discussion it was unanimously carried.

Standardizing Odd Lengths of Lumber

The question of odd lengths was next discussed. Mr. Victor H. Beckman, Seattle, introduced the subject. Various other members spoke, and Mr. Anstie mentioned that the mountain mills were practically unanimously—95 per cent.—in favor of odd lengths in the upper grades.

The following resolution was carried: "That this convention approves of the resolution adopted by the United States National Lumber Manufacturers' Association at Seattle, July 13th, to wit: That in the manufacture of all lumber, odd as well as even lengths be the standard in flooring, ceiling, partition, finish, mouldings, drop and bend siding, and will adhere to same, believing it to be to the best interest of the lumber trade. This to be effective commencing January 1, 1910.'"

A discussion upon the duty on lumber and shingles was introduced by Mr. A. Leitch, East Kootenay, who declared that the matter was simply "a question of votes." Sir Wilfrid Laurier had said, "There is no question in my mind as to your right, that you are entitled to a duty, but it is a matter of expediency." An interesting discussion followed, during the course of which Mr. J. Cameron said he believed that if the lumbermen of Canada stood shoulder to shoulder in the matter, they could swing the votes which way they liked. A motion was introduced and carried, calling for a duty of $1.25 on rough lumber and 30 cents per thousand on shingles.

The Banquet

In the evening an enjoyable banquet was held at the Dutch Grill. Mr. J. E. Tucker presided, and the guests included a large number of prominent Vancouver citizens, among whom was Mayor Douglas, seated on the chairman's left. In addition to a capital toast list, many good songs and recitations were contributed. At the close of the banquet the guests were invited to witness a cinematograph reproduction of the Johnson-Ketchel fight, and one and all accepted the invitation.

After the repast, Mr. A. D. McRae opened the toast list with the loyal toast, which was heartiy received, and was followed by a toast to the Province of British Columbia, to which Mr. Tisdall, M.P.P., replied. Mr. Tisdall mentioned the importance of lumbering from a revenue producing point of view, and referred also in complimentary terms to Mr. T. W. Paterson, one of the well known lumbermen of the province, who had been honored with the appointment of Lieutenant-Governor of the province.

Mayor Douglass responded for the city of Vancouver, and Mr. Dana of the C.P.R. spoke for the transportation interests. Mr. R. H. H.

Alexander delivered an interesting address upon "Lumbering, Past and Present," and Mr. Peter Lund spoke to "Lumbering in the Future."

Mr. Sayward, of the Victoria Lumber Mills, an old timer, who is shortly to leave the business, made a few remarks, following upon which Messrs. Leitch and Hackett responded to the toast to "The Old Timer." Mr. Leitch was humorous, while Mr. Hackett, in more serious vein, told something of the industry in past years.

Mr. T. F. Paterson proposed the toasts to the guests of the evening, the delegates from the mountain and eastern mills, and visitors from across the line. Messrs. Otto Lachmund, A. R. Cavanagh and V. Beckman responded.

On Dec. 11 the convention discussed the matter of a uniform standard of finished sizes for the coast and mountain associations. The sizes were already so similar that it was agreed that a complete scale could be worked out in a short time.

Messrs. McRae and Alexander were appointed a committee to draft suggestions to the C.P.R. in regard to car supply to lumbermen.

The code of ehtics adopted by the American Lumber Trades Congress was considered, and it was decided to adopt it in the main with certain alterations by local secretaries in order to meet local conditions.

A committee was appointed to look into the insurance situation, and recommend some course of action to the lumber associations.

The question of "Uniform Terms of Discount" was taken up, and it was decided to allow 2 per cent. off for cash in 15 days, and 1 per cent. off in 30 days, with a net price for 60 days. The general feeling of the meeting was that no business should be done with those retailers who refused to accept drafts.

Personal News of Interest to Lumbermen

Mr. H. S. Riddle, Montreal manager of the Jeffrey Manufacturing Company, was a welcome visitor to the "Canada Lumberman" recently. Mr. Riddle reports excellent business conditions throughout his field of work.

Mr. F. E. Lucas, formerly connected with the C. C. Manuel & Sons Company, at Escanaba, Mich., has gone to Sutton, Que., to become manager of the new plant which the company is erecting there.

Mr. J. M. Hastings, the prominent Pittsburg, Pa., lumberman and head of the J. M. Hastings Lumber Company of that city and the Davison Lumber Company, of New York and Bridgewater, N.S., accompanied by Mr. C. O. Shepherd, of New York, spent a fortnight in December going over the extensive holdings and operations of the Davison Lumber Company.

Mr. George H. Hager, financial manager of S. A. Hager & Son, lumber and coal dealers, Toronto, and son of Mr. S. A. Hager, was married on December 29th to Miss Georgia Rodgers, of Toronto, soloist at the Central Presbyterian church The wedding occurred in the Bloor street Preesbyterian church. Mr. and Mrs. Hager are spending their honeymoon in New York and Boston, whither the best wishes of their friends and of the "Canada Lumberman" have followed them.

Mr. W. W. Bell, one of the leading stockholders of the Mundy Lumber Company, of Three Valleys, B.C., recently visited the company's plant in British Colubmai. On his return to the East he was accompanied by Mr. S. A. Mundy, general manager of the company, who will spend some time in the East. The sawmill which this concern lost by fire has been already rebuilt. It is equipped with all the modern conveniences and is a single band mill with a capacity of about 75,000 feet daily.

Mr. W. G. Paynes, formerly of the Turner Lumber Company, Toronto, has become associated with the firm of Campbell & Carman, Traders Bank building, Toronto, and will travel for the firm in western Ontario. He and Mr. J. P. Johnson will cover the territory between them. Mr. Paynes has been engaged in the lumber business for the past seven or eight years and, being a young man, 33 years of age, has a promising future to look forward to. During his connection with the Turner Lumber Company, Mr. Paynes has made a wide acquaintance in the trade, all of whom will join in wishing him every success in his new field of work.

Dr. B. E. Fernow, Dean of the Faculty of Forestry of the University of Toronto, attended a conference at Washington, D.C., on Dec. 30 and 31, of the heads of a number of forest schools. The subject of the conference was "Education in Forestry." Dr. Fernow read a paper on "The Public Responsibility of the Forest Schools," dealing with their relation to the public in regard to the teaching of forestry. Among those in attendance at the conference were: Hon. James Wilson, United States Secretary of Agriculture, who delivered an address of welcome; Chief U. S. Forester Gifford Pinchot; Henry S. Graves, director of the Yale Forestry School; Prof. R. B Fisher, Harvard; Samuel B. Green, University of Minnesota; Prof. F. Roth, Dean of the Forestry School of the University of Michigan, and Frank D. Miller, head of the Forestry Department of the State of Washington.

Mr. G. W. Johnston, formerly with the Wilson Lumber Company of Toronto, has gone into business on his own account. He has taken into the business his son, Mr. Kenneth Johnston, who was formerly manager for the Wilson Lumber Company at Cincinnati, Ohio. The new company will be known as the Johnston Lumber Company, and will have its office and yard at the foot of John street, Toronto. They will deal in American and Canadian hardwoods and Canadian white pine. Mr. G. W. Johnston will attend to the buying and selling end of the business and his son will be in charge of the office and yard. Mr. G. W. Johnston's acquaintance with the hardwood business, both in the United States and Canada, is of the most thorough nature, as he has made it his life work. His son also has had an extensive experience in the business, so that between them they will be able to handle a large business. Mr. Johnston's many friends will join the "Canada Lumberman" in wishing the new firm every prosperity.

Mr. M. W. Teufel, managing director of the Davison Lumber Company, Bridgewater, N.S., and New York City, has severed his active connection with Mr. J. M. Hastings and his associates, of Pittsburg, Pa., who control the Davison Company, to become assistant to President Edward Hines, of the Edward Hines Lumber Company and its affiliated interests at Chicago. Mr. Teufel will retain his stock interest in the Davison Lumber Company. For years past he has been actively associated with Mr. J. M. Hastings, of Pittsburg, in his business enterprises, and since the time that the large purchase was made by Mr. Hastings and his associates in Nova Scotia, Mr. Teufel has played an important part in assisting those interests in the development and conduct of the business, which to-day has grown to be one of the strongest and biggest factors in the export and domestic lumber trade in the East.

Mr. Teufel's departure from New York has led to many expressions of appreciation, among which is the following from a contemporary lumber journal: "During his associations with us the past year or two, Mr. Teufel has made a host of friends. In fact he could not help it. While he had been a visitor in a business capacity in the Metropolitan district for the past 15 years or more through his previous Chicago associations, and latterly his Pittsburg connections, and had through those affiliations enjoyed a liberal local acquaintance, it was not until his permanent location here two years ago and since, that those in the trade with whom he came in closer contact recognized his high characteristics, and we therefore feel that we express the sentiments of the district trade when we say that the loss of Mr. Teufel's genial and optimistic personality and his royal good fellowship, is sincerely deprecated."

Mr. Hugh A. Rose Reports Improvement in the West

Mr. Hugh A. Rose, Toronto representative of the Fraser River Lumber Company, Fraser Mills, B.C., has returned to Toronto after a visit to the head office and mills. While in the West he attended the conference of lumbermen at Vancouver and also visited the Anacortes Lumber and Box Company's plant in Washington. Mr. Rose returned to Toronto with a splendid load of optimism regarding conditions in the West. A concrete indication of the state of affairs in the West is afforded by the advancing prices. Already considerable advances have taken place and a further advance was decided upon while Mr. Rose was in the West This is to be effective from the first of the year and involves an advance of $1 in the price of low grade lumber and $2 to $3 on the upper grades.

Speaking to the "Canada Lumberman" Mr. Rose said: "For the past three or four years there has been what has been called a 'buyers' market' and the buyers have had it all their own way. They have been persistently knocking down prices and buying at their own figures. Now, the yard stocks on the prairies are all low, very few yards having anything like an average stock, and the same conditions prevail at the coast among the manufacturers. None of the manufacturers have large stocks on hand. The outlook is the best that it has been in years. The manufacturers have been dominated by the buyers for so long that they are beginning to chafe, and now, having turned, they are going to try to make a little money out of their product. The price of logs is steadily advancing and labor is getting more expensive every year. There is a feeling of optimism out in the West that is contagious. Although prices have advanced there is no doubt that between now and the spring further advances will take place.

"There was a time when any little mill around the coast could get out almost any kind of a bill with very little difficulty, but at the present time good logs are at a premium and the man who has to go out and buy logs is in poor shape to compete with the man who has his own stumpage. So far as the Fraser River Lumber Company is concerned, we have our own limits and do business exclusively through our representatives. Last year we cut over 90,000,000 feet, and on the first of December we had less than 15,000,000 feet of unsold product. Most of that 15,000,000 is higher grades, and when I left the plant we were getting orders from the line yard companies and others that would clean up our dry stock pretty well.

"On December 26th the mill shut down for about two weeks for the purpose of making minor repairs, installing new machinery, including a large turbine electrical generator to supply power for individual motors for the machines in the planing mill, and to light the town. We are also installing machinery for the manufacture of cross arms."

Montreal Lumber Market Inactive

Holiday Season makes Quiet Trade —Pine Prices Gradually Advancing

Montreal Office of the "Canada Lumberman."
December 29th, 1909.

With the inventory period rapidly approaching there is a noticeable dropping off in the general activity of the lumber market in Montreal. In some quarters, however, wholesalers report that yards are buying freely, with an evident confidence in the present outlook. The demand for box lumber is greatly improving and dealers view the general situation optimistically. Encouraging reports are received from the American market, especially from Chicago and the West.

White pine prices are steadily advancing and this lumber is very scarce, with some lines practically cleaned up. 1½-inch shipping culls and outs and, to a certain extent, 2-inch sizes, are very scarce. "O" cull pine is also in splendid demand. The scarcity of pine stock in Quebec this season is very marked, the amount of waney white pine stock cut in Quebec this year was 738,840 cubic feet, as compared with 1,139,960 in 1907, and 990,640 in 1908. Furthermore, only 57,520 cubic feet of square white pine is on hand at the present time, as compared with 132,560 cubic feet a year ago.

An advance of $8 per thousand over last year's figures is noted in some grades of pine lumber. 3-inch mill culls are very scarce. A prominent mill in the Ottawa district is said to have cut only 20 per cent. of the usual amount.

Spruce is very inactive just now. The New England market is being supplied with Southern yellow pine at a very cheap figure, which is altogether too low to allow of competition from Canadian spruce. There is, however, an undercurrent of optimism pervading the Southern markets which would seem to predict a strengthening of the present market condition.

Following are revised current wholesale lumber prices for Montreal:

1-in., 2-in. and 3-in. pine log run mill culls out	$27.00 to $35.00
1-in., 2-in. and 3-in. pine log run dead culls out	24.00 to 28.00
Pine "O" culls	13.00 to 14.00
Pine mill culls	17.00 to 19.00
Spruce flooring, sheeting, etc., No. 1	24.00 to 26.00
Spruce flooring, sheeting, etc., No. 2	19.00 to 21.00
Merchantable spruce boards	16.50 to 18.00
2-inch merchantable spruce	16.50 to 18.00
Cull spruce boards	14.00 to 15.00
2-inch spruce culls	14.00 to 15.00
1¼-inch spruce mill culls	15.00 to 16.00
Spruce scantling, 3x 3, 12 and 13 feet	16.00 to 17.00
Spruce scantling, 2x 3, 12 and 13 feet	16.00 to 17.00
Spruce scantling, 3x 4, 12 and 13 feet	16.00 to 17.00
Spruce scantling, 2x10, 12 to 16 feet	19.50 to 21.50
2-inch (scant.) x 9, fifth quality, N. Y. "outs"	16.50 to 18.00
Oak, 1sts and 2nds, quarter white	87.00 to 90.00
Chestnut, 1sts and 2nds, 1 inch	50.00 to 52.00
Birch, 1-inch log run, mill culls out	18.00 to 20.00
Maple, 1-inch log run, mill culls out	18.00 to 20.00
Basswood log run, mill culls out, 1x4 and up, winter sawn	24.00 to 26.00
Basswood log run, dead culls out, 1x4 and up, winter sawn	20.00 to 24.00
Laths, mill run, spruce, 1⅜-inch x ⅜-inch, 4 feet	3.00 to 3.25
Laths, pine, No. 1	4.00 to 4.25
Laths, pine, No. 2	3.25 to 3.50
Laths, pine, No. 3	2.50 to 2.75
Shingles, clear	2.90
Shingles, 2nd clear	2.15
Shingles, extras, 1's	1.35
Merchantable hemlock boards	14.50 to 16.50
2-inch merchantable hemlock	14.00 to 16.00
Cull hemlock boards	12.00 to 14.00
2-inch hemlock culls	12.00 to 13.50

From New York come favorable reports of the past season's trade and much encouragement for 1910. It is held that the prospects for new business will be greater in the coming year and that the opportunities for over production are handicapped. Should buyers appreciate the situation and pick up the available supplies, higher prices will be the natural outcome early in 1910.

American hardwood stocks are very scarce at the present time, with the market advancing in price. In Montreal, hardwoods are quoted firmly, but the demand, as could be expected in December, is not particularly active.

The Boston market for spruce is considerably firmer than has been the case for some time. Stocks of dry hemlock are small and, while the present demand is not active, dealers are holding their stocks in anticipation of realizing their asking price. The Boston shingle market is reported quite dull, while laths are said to be scarce and are held at firm figures. Quartered oak is quoted at from $88 to $90.

A St. John, N.B., despatch reports the death of Mr. F. C. Whitehouse at Topsham, Me. Mr. Whitehouse was head of the Bay Shore Lumber Company, an American concern, which a few years ago invested a quarter of a million dollars in lumber property in St. John county, erected a mill, constructed barges, and has been making large annual shipments of pulpwood to mills in Maine.

Annual Meeting of Montreal Lumber Association

The annual meeting of the Montreal Lumber Association of the Board of Trade was held in the association's rooms on Dec. 13th. The president's report of the business transacted by the association was received and the following officers were elected for the ensuing year: President, Alex. McLaurin; Vice-president, W. K. Grafftey; Treasurer, F. W. Cotter; Directors, J. H. Redfern, W. A. Filion, G. A. Grier, Jr., G. A. Scott.

President McLaurin in summing up the year's work referred to the serious increases in railway freight rates, on local and export lumber, which were enforced by the railway companies in 1908. He regretted that, owing to the careful investigation that it required, the Board of Railway Commissioners had not yet given their decision in the matter, but if the trade succeeded in proving to the board that these increases were unwarranted or unjust, the increases collected since July 15th, 1909, would be refunded.

Speaking of the Transportation Bureau, President McLaurin stated that they had taken advantage of the services they offered, notably in the question of interswitching between railway terminals on the Island of Montreal, in separate municipalities, but within four miles of each other. They held this should be done by the railway companies at not more than 10 cents per ton. The board's decision on this point is shortly expected.

Another matter taken up by the Transportation Bureau recently is the question of stamping on advice notes, the weighing certificate, covering the gross tare, allowance and net weight, in order that consignees may be able to check the weight of all cases received. They are also investigating complaints regarding the supply of cars that cannot be loaded to their minimum capacity. They had been successful in having the rating of cars and mixed cars of joiner's work advanced by the railway companies from sixth to fifth, disallowed.

The railway companies, through the efforts of their association, must now supply stakes and fastenings required to hold lumber on flat cars.

The president noted with satisfaction that while the Intercolonial Railway had not been placed under the jurisdiction of the Railway Commission, they had adopted the commission's uniform bill of lading, which had become effective on the 1st of October. The new bill clearly defines the liability of the railway companies for loss or damage to goods in transport by them, and should result in an early settlement of all claims.

Personal News from Montreal and Quebec

Mr. E. Bradford will saw 30,000 logs this winter at his Granby, Que., mills.

W. F. Robinson, of London, Eng., who is the representative in the old country of the Laurentide Pulp & Paper Company, Grand Mere, Que., recently spent a few days in Toronto.

Mr. G. Joly de Lotbiniere, son of the late Sir Henri Joly de Lotbiniere, visited Toronto recently and obtained information from the Department of Lands, Forests and Mines upon the subject of forest conservation. He is administering the immense family estate at Pointe Platon, near Quebec, on the newest principles.

Messrs. J. & W. Duncan, lumber merchants, 160 Delorimiere avenue, Montreal, recently acquired the extensive premises of Mr. Antoine Viens, at 1833 Ontario street east, and formerly known as the Mount Royal Box Company, Limited. This property comprises an area of 179,000 square feet, with every modern facility, including a railway siding. It is understood that the cash price of $35,000 was paid to Mr. Viens by the Duncan Company, who will now have very much larger yards for their general retail lumber business. Mr. Will Duncan, a member of this firm, is an old friend of the "Canada Lumberman," having been a subscriber for thirteen years.

A trade and commerce bulletin referring to the roller skating craze in England, says a considerable quantity of hardwood will be used in the flooring of these rinks and for the purposes of renewal in those already built. In this connection, it may be pointed out that Canada should be able to supply a good portion of the timber required, the wood used in the rinks already erected in this locality having come, it is said, from the United States, although it is likely that much of this was of Canadian origin in the first instance. Maple is the class of timber required, and of the hardest grain—"rock maple," as it is here called, which is tongued and grooved, measuring 6 feet in length, 2 inches broad, and ¾-inch thick. It is perhaps hardly necessary to say that shipments should be of uniform grade throughout, otherwise they would be valueless for the purposes desired.

Jos. H. Ruttier, 60 years old, a well known lumberman of Sutton, Que., was run over and killed by an express train on Dec. 14.

The Care of Inserted Tooth Saws

Practical Pointers on a Subject of Importance to Saw Mill Men—By R. W. Schoening*

A great number of inserted tooth saws have been condemned, relegated to the scrap pile, or hung on a nail in the mill, where their bold presence occasionally reminds their owners that these idle and expensive tools have run well and made good lumber at one time.

One fine day, however, their saw started "bucking" and absolutely refused to work, the owners not knowing the source of trouble finally concluded that the saw required hammering, sent it to the saw shop; the sawmakers applied their skill with hammer and level, changed the tension, smoothed her up well, and sent her back. They put her on, but she "bucked" as before, and they sent her back to the saw makers, who changed the tension a bit, etc., etc., until she was given up as a bad job, and finally thrown into some corner of the mill and labelled as one of the incurables, because no matter how hammered the result was always the same. It would not work. Ten chances to one this particular saw had some minor defect which passed the sawmaker's scrutiny unnoticed, because the sawmaker has faith in his ability to hammer, and the mill man believes in what he terms "saw pounding," when really a little judgment and common sense pounded into the heads of both would give far better results.

I have no desire to belittle the great art of saw hammering, because hammering, when properly and scientifically administered, is necessary and beneficial to the saw, and saws could not be made and used without hammering, but I wish to impress upon you the fact, that too often a minor defect is regarded as unimportant, and it is this indifference to minor ailments, and the lack of money and an agreeable disposition so essential to one's health, which cause the trouble.

An inserted tooth saw is always the same diameter; always round; always ready—if it has been made right—as most saws are. Others are made with good intentions, but an inserted saw requires study, care, and attention, as well as any other saw.

When refitting new bits or points, rub sockets with rag or piece of waste saturated with good machine or lard oil. This will prevent sockets from wearing and enlarging. After refilling saw with new teeth, see that they are in line, using a saw set gauge for this purpose. If the teeth are not in line, do not dress them down with a file as you would a solid tooth, swaged; but take a saw set and spring the shoulder back into line or until the gauge shows that the points project same distance on either side. When setting or springing the shoulder, take hold of blade immediately back of the heel of the tooth. To gauge your teeth frequently will ensure uniformity, will make smoother lumber, and be easier on your power. I have seen saws lying in the scrap pile that had been sent to the saw shops several times, but could not be made to work at all, and the only thing wrong with them was that the shoulders had sprung slightly, throwing the teeth out of line and causing the saw to run in or out of cut. In every case I made them work as well as when new, chiefly by lining up the teeth. This is a small defect apparently, yet it has caused the loss of both time and money.

Another small defect is found in the loosening of the shanks or holders. This has caused much trouble, yet it is very easily remedied. Take out the shank, place it on an anvil or iron block and strike a number of blows with ball pein end of machinist hammer on both sides, taking care that an even number of blows is hit on either side. Strike on the inner circle of the shank's edge, about midway, and hammer until the shank and bit go in fairly tight.

Shanks worn two or three gauges have caused a lot of trouble, and the only remedy for this is to keep the inner edge of the shank rough with a few rubs of the file occasionally, or put in new shanks.

The man who understands the art of filing bits correctly should consider himself fortunate. A great many men are under the impression that an inserted tooth saw has more hook than a solid tooth saw, but the truth is that an inserted tooth has no more hook than is given it with a file by the operator or filer. It can stand more hook than ordinary solid teeth, owing to its high and heavy shoulder, and for this reason it requires more hook. My experience has taught me that an inserted point should be given as much hook as it can stand for frozen woods, especially for hardwoods. As long as you have a proud corner on your points and plenty of hook, you will have no trouble in cutting hardwood or frozen timber; that is to say, your mill and saw are right in every respect. To produce the proud or pointed corner on your bits, so essential for cutting hard and frozen timber successfully, take an upset swage and light hammer. Strike lightly. To overcome round corners it is not necessary to swage the point out as you would a solid tooth, but merely bring the corners to a point so that the tooth will be wide enough at the cutting point of the tooth to cut fresh and easily. Maintain your hook throughout the life of your bits. Most men decrease their hook unconsciously as the bit shortens. This is a costly mistake, as it causes the saw to work hard and cut bad lumber. The hook should increase with the shortening of the bit, if anything, owing to the blunt state the shoulder and bit present as the bit wears shorter. If you wish to economize and use as much of your bits as you possibly can, take a ¼-inch round file or emery wheel and cut a little gullet into the bit as it wears smaller, doing this from time to time until it becomes too weak to stand. In this way you can maintain your hook and get the most out of your bits.

*First of a series of practical articles on saw management, by R. W. Schoening, saw maker and traveller for the Orillia Saw Repair Works, Orillia, Ontario.

Miscellaneous News of Lumber Affairs

The recent advance announced by the railways in the freight rate per 100 pounds on shingles from British Columbia to eastern points in the Dominion, has aroused vigorous protests from the shingle manufacturers of Vancouver. They claim that they will be unable to make profitable shipments under the new rates, which went into effect on the 6th of December. Railroad officials state that they were compelled to make the change in rates on account of increased operating and handling expenses. On the other hand, the manufacturers say that there was no legitimate reason at all for the increase, and that before they will submit to it they will take action through the Railway Commission to force the railway companies to return to the old schedule.

The B. C. Lumber Manufacturers' Agency, Limited, is the title of a new wholesale selling agency recently organized in Vancouver, which appears to have a bright future. It is in direct connection with a number of the largest mills in British Columbia, the object aimed at being ability to fill any sized order for any class of stock without the slightest delay. Mr. Ivan D. Smith, manager, has been representing the Mason-Gordon Lumber Company, of Montreal, in Vancouver for several years. He is well known on the coast, and possesses the respect and confidence of all men engaged in the lumber business. There has been a distinct need for such an organization, and no doubt orders will flow in upon Mr. Smith thick and fast. See the firm's advertisement elsewhere in this issue.

Over two and a half million trees were sent out from the Dominion forest nursery station at Indian Head, Sask., in the spring of 1909, 2,010 applicants being supplied. In the spring of 1910 trees will be sent for the first time to 2,235 new applicants. Heretofore no coniferous trees have been distributed; in 1911 it is hoped to begin the distribution of this kind of stock, the species to be distributed being white spruce, jack pine, lodgepole pine and Scotch pine. To these the tamarck or native larch will probably soon be added. Applications for trees are now handled entirely at the branch's office at Indian Head, instead of at Ottawa as formerly.

Mr. W. Innes Paterson, the well known lumberman of Vancouver, met with a dangerous accident recently. He visited the waterfront in connection with the arrival of a scowload of paper and, in the darkness, fell through a hole in the wharf. As he fell he struck heavily on a projecting beam, fracturing two ribs. He swam round for a time in the chilly water before assistance arrived, when he was hauled out with the assistance of a rope. Fortunately he made quicker progress than was at first expected, and was soon back at his business again.

The extent to which Canada has been exporting shingles to the United States in recent years is shown by a bulletin on "imports of farm and forest products, 1906-1908," just issued by the Department of Agriculture at Washington. In 1906 Canada shipped to the United States 900,806,000 shingles, of a total value of $1,852,542, but increased this in 1908 to 987,266,000, valued at $2,527,360.

Canadian pine is being used with great success by German manufacturers of aeroplanes. This wood weighs only one-eighth as much as aluminum allow, which it is replacing. In order to obtain the strength of aluminum alloy, however, the wood must be three times as thick. Even at this, however, there is a saving in weight of about two-thirds.

The senior forestry students of the University of Toronto, who have been in Maine for the C.P.R. in connection with a dispute over timber lands, have returned to Toronto During the Christmas holidays the juniors are spending ten days in the woods near Blind River, Ont.

With the January 1st issue "Pacific Coast Wood and Iron," of San Francisco, becomes a bi-monthly journal under the name of "The Pioneer Western Lumberman."

Patents of Interest to Lumbermen

The following list of patents recently issued by the Canadian Patent Office is furnished by Fetherstonhaugh & Company, 5 Elgin street, Ottawa; Russel S. Smart, resident:

122,023. O. B. Osborn, Beloit, Wis.; adjusting and grinding planer knives; Berlin Machine Works, Limited.

122,036. M. Garland, Bay City, Mich.; band saw mills; M. Garland Company.

122,143. G. W. Walker, Hamilton, Ont.; abrasive wheels for grinding pulp.

Consumption of Lumber in Agricultural Implements

A Manufacturing Industry which Uses Many Million Feet of Lumber Annually—Growing Scarcity of Some Classes of Lumber Makes Demand for Other Varieties

The use of wood in the manufacture of agricultural implements is so extensive that the growing scarcity of lumber is a matter of much concern to the manufacturers. Nothing is more noticeable in connection with the manufacture of agricultural implements than the fact that various classes of lumber which formerly were extensively used, are now becoming so scarce that other classes of lumber, in some cases less satisfactory, are of necessity being utilized. The variety of uses to which wood is put in these imlements is little appreciated by the public in general, nor even by the average lumber manufacturer.

It will be something of a surprise to many readers to learn that one large firm of manufacturers of agricultural implements in Canada consume in a year not less than from 18 to 20 million feet of lumber. This, of course, includes not only the lumber actually manufactured into parts of agricultural implements, but that which is used for packing the implements for transportation. Practically all agricultural implements, machinery and wagons for the tilling of the soil and the reaping of the harvest use, to a lesser or greater extent, wood in their manufacture. The company referred to, make use of a great variety of lumber, including hickory, oak, white ash, rock elm, hard maple, soft maple, black ash, basswood, soft elm, whitewood, southern pine, white pine, cottonwood, spruce and gum. For packing the implements the woods used are black ash, basswood, cedar, soft elm, gum, soft maple, balm, hemlock and spruce. Some woods, such as black ash, basswood, soft elm and soft maple, are used both in the manufacture and in the packing of implements, the upper grades being used for the implements and the lower grades for the packing. All the lumber, including that used for packing, is run through the planer, while that used in the manufacture receives, of course, much more work, depending upon the particular use to which it is to be put. Lumber is purchased in the ordinary board form, brought into the shops usually on hand cars, sawn, ripped and planed, bored, morticed and sandpapered. In the case of handles for ploughs, or shafts for turnip drills, the wood is steamed and bent in addition to going through the other processes. For navvy barrow bodies the wood is steamed and bent. Drag scraper handles, barrow handles, whippletrees and neckyokes are turned in the lathe. One might use up a great amount of space in describing the infinite uses to which lumber is thus put, in connection with agricultural implements. The following summary of a few implements will give a slight idea of this variety:

Walking ploughs, handles—Rock elm or oak.
Sulkey ploughs, doubletrees—Maple or oak.
Snow ploughs—Almost the entire body of the plough white oak or maple.
Manure spreaders—Ash, basswood, and whitewood, maple and oak.
Wagons—Oak, hickory, maple, whitewood, birch, ash.
Dump wagons—Birch, maple and oak.
Sleighs—Oak, maple and ash.
Drag harrows, eveners—Maple.
Turnip drill shafts—Hickory, oak and ash.
Wheelbarrows—Pine and maple.
Pulper frames—Birch and maple.
Pulper covers—Pine.
Heavy straw cutter frames—Maple and birch.
Cement mixer frames—Ash or maple.
Land roller tongues and tongues for other implements of like nature—Maple and oak.
Land roller weight boxes—Maple and birch.
Trucks—Oak, maple and birch.
Dump car boxes and frames—White oak.

The proportions in which these woods are used could not be described with much accuracy, but it will be interesting to note that a well known Canadian firm of implement manufacturers which consumes from 1,300,000 feet to 1,600,000 feet of lumber annually, makes use of the following varieties and quantities of lumber:

Maple, 700 to 800M. feet; basswood, pine and cottonwood, 150 to 175M. feet; elm (soft or grey), 200 to 250M. feet; birch, 75 to 80M. feet; long leaf yellow pine, 250 to 300M. feet.

Maple is used mostly for making neckyokes, whiffletrees and singletrees, a large number of which are used with agricultural machinery. For shafts, No. 1 maple is required, but is hard to procure. Some implement manufacturers are adopting the use of long leaf southern pine for shafts, owing to the scarcity of good maple, it being necessary to purchase too large a percentage of No. 2, in order to get the required quantity of No. 1. Long harrow eveners and trackboards for mowers also require a good grade of maple, and a wide stock for the latter. The firm referred to above originally used maple for a large portion of their poles, but, for the reasons just cited, are now using long leaf southern pine almost exclusively.

Basswood, pine and cottonwood—Generally speaking, agricultural implement manufacturers use any one of these three woods for the various purposes, according to the stock available. The greater portion is used in the construction of grain boxes for drills and seeders. It requires to be a good width, and must be good stock—straight grained and as clear as possible. Basswood and pine, they find, are becoming scarce—that is the required quality—so they are now adopting the use of cottonwood to a large extent for the purposes for which they originally used pine and basswood. The required quality of pine is more expensive than cottonwood. This is also used for divider points on the reapers.

The greater portion of elm used by the same firm is 1½ inches thick for making wheel rims, and 1⅝ inches for plough handles, in connection with which latter they also use rock elm when they can procure the required quality. They also consume a large quantity of 1-inch elm for apron slats on binders. This must be No. 1 clear stock, so that there is considerable waste in cutting these out.

Birch is usually purchased for rollers on the binder, but difficulty is experienced in securing the proper grade of stock, it being necessary to buy too large a quantity in order to secure what is actually required in the proper grade. Birch, therefore, is now used mostly for the smaller rollers, and British Columbia fir billets are bought for the balance. In many instances birch is substituted for maple where it is found advantageous to do so from point of quality.

Long leaf southern pine is largely used for pole stock, for which formerly maple was used very largely. This stock, of course, is cut to the lengths, widths and thicknesses specified, so that there is very little waste. It is secured, as a rule, in the required width to cut two poles. Southern pine is also used for parts of hay loaders and side delivery rakes, and some manufacturers are adopting its use in the construction of grain boxes, although for this purpose they use the short leaf variety.

Spokes are made of hickory or good sound oak. They are used in the construction of drill, seeder and rake wheels.

Pitmans for mowers are made of good stout straight grained hickory, are 1¼ inches square, and 33 and 36 inches long, cut to these dimensions by the mills.

Pulpwood Production of the Lake States

Editor, "Canada Lumberman":—

Dear Sir,—As my recent letter in the "Canada Lumberman" seems to have been read with a great deal of interest, as is evidenced by the letters I have received, permit me to take the liberty of writing a short sketch of the Lake States, as a paper making and wood consuming centre.

In 1908, the Lake States consumed 633,331 cords of pulpwood. This out of a total of 3,346,953 cords for the entire country. In the consumption of wood by the mechanical and sulphite processes, they take third rank, being surpassed by New England and New York, in the order named. Wisconsin ranks first among the three Lake States in the consumption of pulpwood, and manufacture of fibre papers. The two principal centres of paper and pulp manufacture are located on the Fox and Wisconsin rivers. Fifteen pulp mills are located on the Fox river, with an aggregate daily capacity of 351 tons of mechanical and sulphite pulps. The paper business in this valley is represented by 30 mills (this includes all mills from Menasha to Green Bay), whose combined daily capacity is 490 tons of news, bond, book, ledegr and other papers.

The Wisconsin valley district includes all mills on the Wisconsin river and its tributaries. Fifteen pulp mills are located in this valley, whose added capacity totals 526 tons. Twelve paper mills are counted in this district, with an aggregate daily capacity of 456 tons of fibre papers. The Fox river develops the greatest water power of any stream in this State. There are a series of rapids extending from Menasha to Combined Locks. There are mills on the Menominee and Chippewa rivers, and a mill here and there in various parts of the State. The Fox and Wisconsin rivers have been especially mentioned because the bulk of the paper and wood pulp business is found upon those streams.

Fourteen pulp mills are credited to Michigan State, with a combined daily capacity of 311 tons. Thirty-seven paper mills, with a total daily capacity of 886 tons, give evidence of the volume of business in paper. Only eleven paper mills are reported. One mill uses peat (a black muck found in swamps) in the manufacture of cardboard. Kalamazoo is credited with seven mills. In 1904, six pulp mills were credited to the State of Minnesota, with a total daily capacity of 190 tons. Five paper mills, with a daily capacity of 185 tons, represented the business of paper making.

These three States are an important factor in the future supply of

pulpwood. There is not enough spruce in the State of Wisconsin to supply the pulp mills. In place of spruce, hemlock is largely used. As a matter of fact, this State uses a larger amount of hemlock than any other State.

Now, a word to my Canadian readers in regard to pulpwood. The pulpwood areas of western Ontario are nearer the Lake States than they are to New York or the New England States, especially when freightage by vessel is taken into consideration. The average cost per cord in the Lake States for 1908 was $7.94. This is $1.60 less than that reported from New York, and is undoubterly due to the large consumption of domestic hemlock. We read of large shipments of Canadian pulpwood to Wisconsin. As a matter of fact, the "Forest Service" reports only 23,736 cords of imported wood used in the mills of this State in 1908. There were shipped into the United States 233,094 cords less in 1908 than in 1907. This was due to business conditions—a smaller demand for paper, consequently a curtailed output. A large amount of domestic wood was cut on account of forest fires.

George B. Oberton,
North Bangor, N.Y.

Forests of the United States—Their Use

The United States Forest Service has published an interesting and instructive bulletin upon the forest resources of the United States, entitled: "The Forests of the United States, Their Use." The bulletin contains the following information:

The industries of the United States which subsist wholly or mainly upon wood pay the wages of more than 1,500.000 men and women. The forests now cover 550.000,000 acres, or about one-fourth of the United States. The original forests covered not less than 850.000,000 acres. Forests publicly owned contain one-fifth of all timber standing. Forests privately owned contain at least four-fifths of the standing timber. The timber privately owned is not only four times that publicly owned, but it is generally more valuable. Forestry is now practiced on 70 per cent. of the forests publicly owned and on less than 1 per cent. of the forests privately owned, or on only 18 per cent. of the total area of forests.

The yearly growth of wood in the forests does not average more than 12 cubic feet per acre. This gives a total yearly growth of less than 7,000.000.000 cubic feet.

Nearly all the native commercial trees grow much faster than those of Europe. The United States forests already grow post timber in 20 to 30 years, mine timber in 25 to 35 years, tie timber in 35 to 40 years, and saw timber in 30 to 75 years.

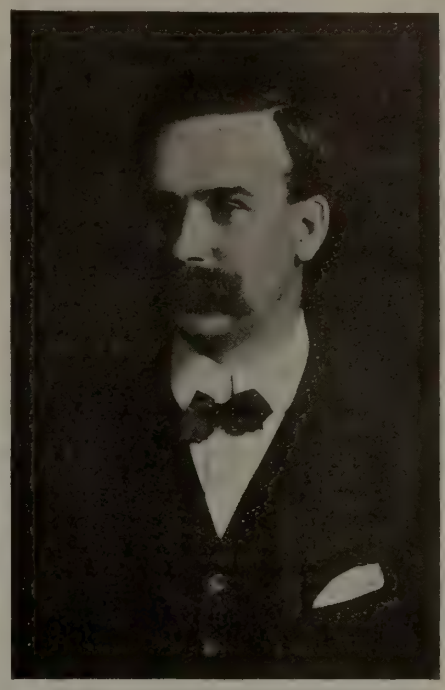
The United States have 200.000,000 acres of mature forests, in which yearly growth is balanced by decay: 250.000.000 acres partly cut over or burned over, but restocking naturally with enough young growth to produce a merchantable crop; and 100,000,000 acres cut over and burned over, upon which young growth is either wholly lacking or too scanty to make merchantable timber.

By reasonable thrift the United States can produce a constant timber supply beyond their present need, and with it conserve the usefulness of the streams for irrigation, water supply, navigation and power.

Under right management the forests will yield over four times as much as now. The waste in the woods and in the mill can be reduced at least one-third, with present as well as future profit. Preservative treatment will reduce by one-fifth the quantity of timber used in the water or in the ground. Forest fires can practically be stopped at a total yearly cost of one-fifth the value of the standing timber burned each year.

One-fourth of the standing timber is left or otherwise lost in logging. The boxing of longleaf pine for turpentine has destroyed one-fifth of the forests worked. The loss in the mill is from one-third to two-thirds of the timber sawed. The loss in the mill product through seasoning and fitting for use is from one-seventh to one-fourth. Great damage is done by insects to forests and forest products. An average of only 320 feet of lumber is used for each 1,000 feet which stood in the forest.

The United States take from their forests each year, not counting the loss by fire, three times the yearly growth. They take 36 cubic feet per acre for each 12 cubic feet grown; they take 230 cubic feet per capita, while Germany uses 37 cubic feet, and France 25 cubic feet.



Referring to remedial measures, the bulletin says: "We should stop forest fires. By careful logging we should both reduce waste and leave cut-over lands productive. We should make the timber logged go further by preservative treatment and by avoiding needless loss in the woods, the mill, the factory, and in use. We should plant up those lands now treeless which will be most useful under forest. We should so adjust taxation that cut-over lands can be held for a second crop. We should recognize that it costs to grow timber as well as to log and saw it.

"We should continue and perfect, by State and nation, the preservation by use of forests already publicly owned; and we should extend it to other mountain forests more valuable for the permanent benefit of the many than for the temporary benefit of a few.

"If these things are done, they will conserve our streams as well as our forests. If they are not done, the usefulness of our streams will decrease no less than the usefulness of our forests."

Canadian Lumbermen of Prominence

Mr. E. L. Todd of Montreal—Experienced in every Branch of Lumbering

E. L. Todd, of Watson & Todd, Montreal.

Mr. Edgar Lawton Todd, the subject of this sketch, was born in the quaint village of Yarm, Yorkshire, England, 36 years ago. After receiving his education, in plain but telling English style, he early turned his attention to the problems of the business world. That he should have selected lumbering as a profession is natural. A well built youth, teeming with ambition, he felt that in no other trade were the same opportunities for adventure and promotion presented, nor is it strange that after a short apprenticeship with his uncle in Liverpool, he should set out for Canada, to seek his fortunes in the wilds of the new country.

In 1891, a young man of 18, Tood reached Canada. He was to all intents an absolute stranger, but this did not discourage him. He possessed a world of ambition and a willingness to learn the new country's ways. He was imbued with one great desire—to learn the timber business from the ground up and thereby earn promotion in his chosen occupation.

His first position was held with the Canada Lumber Company, of Carleton Place. Camp life in the famous Mississippi Valley in those days was full of hardships, and this young Todd quickly realized. It was anything but the roseate life he had so fondly pictured, but it was here that his tenacity of spirit, an inherent quality of the English race, stood him in good stead. In spite of his difficulties he continued by his work to add to his hard earned experience.

From his position as trail maker for the log cutters he gradually advanced notch by notch until he had filled the various responsible positions in the operation of a sawmill. His next post was that of timekeeper, and then he became salesman.

The season of 1895 found Mr. Todd in Newfoundland, representing Messrs. Watson & Todd, of Liverpool. At the time when Mr. Todd became associated with his uncle's company, Mr. Martin Power was in charge of the Montreal office. On Mr. Power's retirement to enter business for himself, in 1906, Mr. Todd was appointed to this position, and has since filled it acceptably.

The environments of the lumber industry make it perhaps the healthiest occupation that can be engaged in. The open air, the free life, all contribute to the upbuilding tendencies it possesses. Mr. Edgar Lawton Todd is no exception. He is a well built, robust type of Canadian, a thorough lumberman, but above all a gentleman and one with whom it is always a pleasure to meet and converse.

Firm Canadian Pine Markets in England

The London, Eng., "Timber Trades Journal," in its last issue to hand, says: "The market for yellow pine is firm, and Canadian shippers are holding on to their stocks because they consider the position favorable for further improvement in values. It is authoritatively stated that the stock of first quality deals, also seconds and good sidings, will be scarce next year, the stocks wintering on the other side being exceptionally small; there is also no accumulation of stocks here, buyers of late having in all the pine-consuming trades been purchasing from hand to mouth, and should anything like a revival in the consumption take place, prices will go up. We hear that the principal Ottawa cuts have been sold for next season at an advance on last year's prices, and that the J. R. Booth cut has been sold, as usual, to Robert Cox & Company and J. Burstall & Company; the W. C. Edwards cut has been purchased by Watson & Todd, and W. & J. Sharples have secured the Hawkesbury production."

The Canada Gazette gives notice of the incorporation of the following companies: The Elmitt Lumber Company, Limited, Ottawa, Ont., capital, $20,000; incorporators, T. Elmitt and T. F. Elmitt, both of Ottawa. The Nominigue Pulpwood Supply Company, Montreal, Que., incorporated, capital $20,000; incorporators, A. Ecrement, notary public; C. A. Wilson and A. Rives Hall, advocates, all of Montreal.

THE MACHINERY WORLD

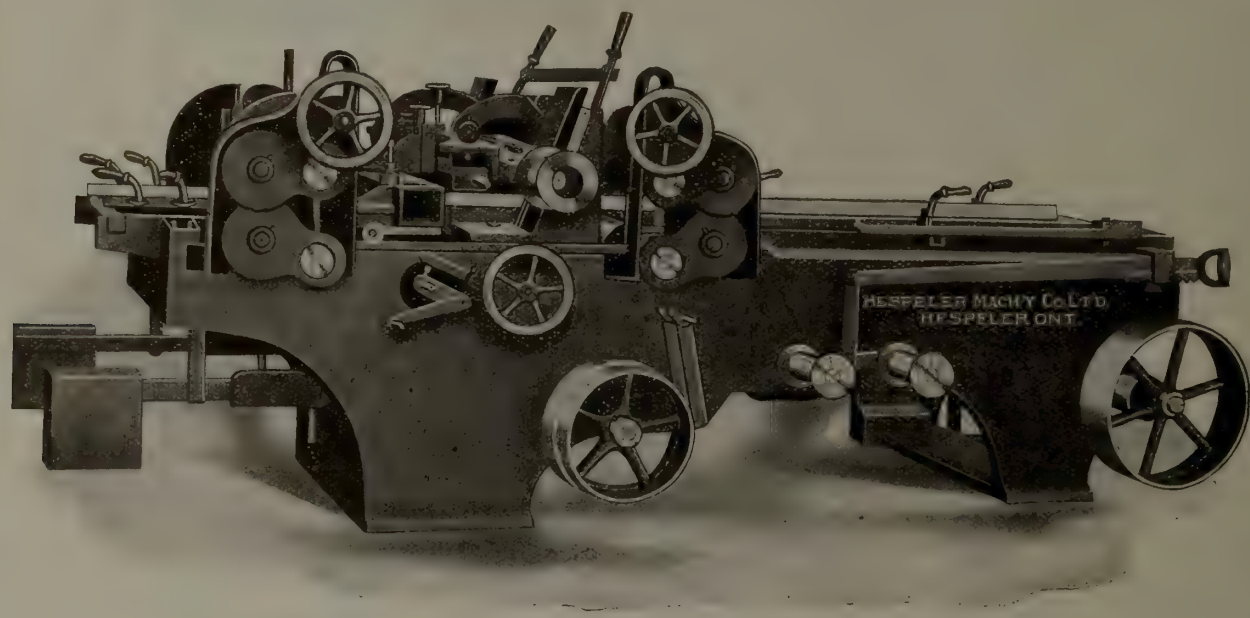
What Manufacturers of Logging, Sawmill and Woodworking Equipment are Doing

The Hespeler Machinery Company's Good Progress

The extent to which Canadian made machinery is making its way in the lumbering and woodworking industries of Canada is one of the most encouraging indications of the prosperity and widespread development of Canadian manufacturing. A firm which, though already young, has made an enviable name for itself in these fields is the Hespeler Machinery Company, Limited, of Hespeler, Ont., whose machines are to-day in operation in many of the leading plants in Ontario. So busy have they been during the last year that they have been obliged to build an addition to their plant and have other extensions under consideration.

The Hespeler Machinery Company bought out the Clark-Demill Company, Limited, on Jan. 2nd, 1909. The president of the company is Mr. Geo. D. Forbes, who is well enough known to require no introduction to the public; the vice-president, Mr. W. A. Kribs, ex-M.P.P., is the well known builder and contractor; and the secretary-treasurer and managing director, Mr. W. G. Chater, was for eleven years general sales agent in Ontario for the Jenckes Machine Company. The company have made no attempt during the present year to extend their business beyond Ontario. The time has been spent in redesigning a portion of the machines made by the former company and completing a new line of machines not made before in Canada. It is the policy of the company not to attempt to make everything. They are confining themselves to standard lines of planing mill machinery and special machinery for furniture factories. Their new catalogue, of the loose leaf type, is practically completed and ready for the mails. This will be added to from time to time as new machines, several of which are under way, are completed.

The new addition to the company's premises consists of a building at one end of the plant, the dimensions being 108x44 feet, two storeys in height. Of the addition, a section 41x44 feet will be devoted to the new office, which will be finished in early English mission style. A section of the same size upstairs will be fitted up for a draughting room and store room, and the balance of the upstairs section will be fitted up for a pattern shop and for lighter machine tools. The balance of the new section on the ground floor will be devoted to an extension of the machine shop, which will then reach from the foundry through to the street line, giving a total floor space of 67 feet by 285 feet, which will be devoted to machinery and the fitting of tools only.



One of the new machines, not formerly made in Canada, and for which the Hespeler Machinery Company have secured the patent rights, is the Smith revolving bed sander, for furniture factory use, a machine which has a large sale in the United States and does the work of three or four ordinary type machines, as well as doing a vast line of work which cannot be done on any other machine at all. These machines are now completed and on the market, and orders and enquiries are being received from all directions. Another new machine which is meeting with much success is the Lucas patent panel sander, brought out in Jamestown, N.Y., in January, 1909. This was immediately registered in the Canadian Patent Office and the rights assigned to the Hespeler Machinery Company. Several of these machines have already been shipped by the company and six of them are now under way.

A machine on which they are making a special run is the Whitney type cabinet planer, quite a number of which have been bought lately, while others are under construction and order at the present time. This machine is rather more expensive than any of its type yet introduced, but the Canadian market at the present time is calling for high class machines and this machine has been very popular, as repeat orders have come from the same town within the last month in spite of the numerous cheaper machines offered.

The policy of the company is to make one or two good machines of each type, where it is generally customary to carry six or eight different varieties. The lighter and cheaper machines, however, give so much trouble and cause so much dissatisfaction that they have been discarded and do not appear in the catalogue at present being issued. Only good serviceable high class machines are being furnished. As a proof that this is the right course to pursue, out of approximately 180 machines shipped during 1909, only one solitary complaint has reached the firm, which more than ever convinces them that when something cheap is wanted it is better to leave it alone. They have received assurances from many of the leading manufacturers throughout the country that if they will stick to high grade work they will not lack for orders, as even to-day a great many of the leading works require high grade machines even if it is necessary to go to the United States to get them at higher prices, duty added.

During 1909 the company built almost exclusively for stock, practically all machines being put through from three to six at a time, tested in batches and placed in the warerooms, so that they have been enabled to fill practically all orders promptly. In some cases, in spite of keeping continually at work on certain lines of machines, they have run short; five of one line of machine being called for within a week. With additional facilities and space they expect during 1910 to, at all times, be able to furnish every standard line of machinery within a week from receipt of order, which will be appreciated and is appreciated by the trade. During the past year fires have taken place in some quarters where it was necessary to have machinery on the ground promptly, and in almost every case Hespeler machinery was the first to arrive. As an example, the Matthews mill at Fort William was burned during the past summer and had to be replaced in a hurry. An order for 16 machines arrived in Hespeler at 7 o'clock on a Monday evening, and on the following Monday morning, one week less 6 hours, eleven of the principal machines were unloaded on the dock at Fort William, which is believed to be a record shipment from a manufacturing concern. It was gratifying to the firm to receive word from Mr. Matthews a little later on, that he had not had any trouble with any of the machines and that he is to-day perfectly satisfied with his rush transaction. This is only one of many instances where prompt delivery together with a good class of machinery have brought business at the minimum of cost.

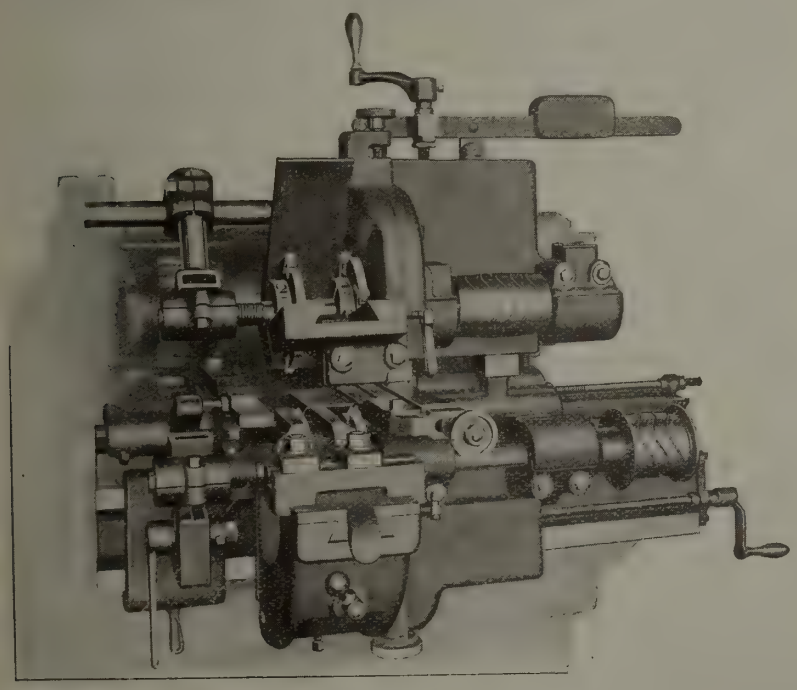
At the present time it appears to be the policy of manufacturers to sell to jobbers and dealers, and rush orders are generally filled from Montreal, Toronto or Winnipeg warehouses, depending on the locality. The Hespeler Machinery Company's machinery is not carried in stock by any dealers in Ontario. Profits in woodworking machinery are necessarily small, and in the long run the company believe it is more satisfactory to deal with the users of the machinery direct, as laymen do not always know all the details of the machines and consequently are more

Hespeler Machinery Company's Single Cylinder Planer and Matcher No. 54 and 56.

apt to recommend machines for services they are not intended to perform, than the company would, were they selling the machines direct.

As the wood tool field covers a large line, it is not the intention of the company this year to go into competition with the existing companies on heavy matchers and flooring machines. This field is now well covered, and they are satisfied to confine themselves to standard lines of small machines. Even with the curtailed line they are offering to the public they will have nearly twice the variety of machines that they should have according to United States methods of manufacturing to-day. It is a well known fact that many of the largest makers of wood tools in the United States are not making to-day over a dozen different machines, and it is impossible to attain perfection or to approach it when making a variety of 200 machines.

The product of the company includes cabinet planers, pony planers, surface planers, single cylinder planers and matchers, which are used largely in the smaller mills and one of which, "No. 54 and 56," is illustrated herewith. These machines are at all times in stock or under construction. Moulders are made in all sizes from 13-inch x 12-inch to 6-inch x 16-inch; jointers and bus-planers from 12-inch to 24-inch. Other machines made include new style power mortisers with and without power attachments, tenoning machines, door clamps, shapers in three sizes, self feed rip saws, in three sizes, dimension saws, combination rip and cross cut variety saws, rip and cross cut saw tables, roller cut off saws, lightning cut off saws, adjustable and standard swing cut off saws, seven styles of borers, band resaws from 42-inch to 54-inch, 36-inch band saws of the newest type, revolving bed sanders, Lucas panel belt sanders, adjustable and standard arm sanders and a full line of wood lathes and veneer presses.



They have under construction several machines not before introduced in Canada which will be of interest to the furniture trade principally. These will be finished and offered to the trade by March, 1910.

On the whole the company are extremely well pleased with the outlook for business during 1910, and are particularly satisfied with the success with which they have met during the past year.

A Useful Beading Attachment

The desirability of maintaining a full number of knives on the surfacing heads of fast feed planers and matchers, in order to obtain the maximum output, has led to the development of a separate attachment for carrying beading and all other formed cutters, such as are used in working irregular forms.

The S. A. Woods Machine Company, the planer specialists, Boston, U.S.A., have brought out a new attachment, which is illustrated herewith, and is said to be one of the most important improvements ever applied to planing machines.

S.A. Woods Beading or Profiling Attachment for Fast Feed Planers and Matchers.

This new beading or profiling attachment carries all the cutters for taking formed cuts usually done by the top and bottom heads. It enables the operator to keep the full number of straight knives on the top and bottom heads for all classes of work. Provision is made for truing off the straight knives on the top and bottom heads, while in operation, and without removing them from the machine. The formed knives are also jointed while running by a profile jointer or truing device, made to the desired pattern, and all ordinary forms of profile work can be run at the maximum feed.

Heretofore in applying formed cutters to the top or bottom heads of a planing machine, it has been necessary to take off some of the straight knives, and to slow down or reduce the feed of the machine to offset this. No reduction in feed is necessary with the new beading or profiling attachment. With this attachment, when working novelty siding, it is possible to quickly change for flooring or similar work, and the change is made almost instantly by a few turns of a crank.

In one large mill where the work is of a variable nature, until this new Woods attachment was installed, it was the practice to sort all the undressed stock and run the machine on one class of work until a sufficient amount of another could be gathered to make up several hours' run. This required a great deal of storage room and necessitated holding up a large amount of stock, as well as a great deal of extra handling. This concern now takes the lumber as it comes to the machine, in truck loads, and runs the stock from load to load.

This attachment is placed at the feeding-out end of the machine, and is made either single or double as desired, whereby either one or both sides of the board may be operated upon. The upper attachment is provided with a shoe or chip breaker that rides upon the face of the stock and is at all times positioned thereby. The cutter head has a fixed relation to this shoe and no variation or change in thickness of stock affects the depth of the cut taken by this head. Both heads may be adjusted horizontally or vertically while the machine is in operation, and may be either put into or taken out of operation while the machine is running. A detachable end bearing is provided for each spindle for steadying it, and proper spring guides are provided for holding the cutters true with the edge of the stock. The cutter heads used upon these spindles are of a special disc type that permit of the use of self hardening steel cutters absolutely secured against the possibility of driving back or flying out. Quick means are provided for adjusting these cutters with relation to each other, and extra discs with any desired pattern of cutters in them can be placed upon the spindles in a few minutes' time. Such changes of heads are supposed to be fitted up in the grinding room and sent to the machines ready to operate. The table of the lower attachments swings down for greater accessibility to the lower cutter heads. This attachment permits the working of all beaded or profile stock at the maximum rate of feed for the surfacing heads of the machine, and the work produced is of an equal character.

Further details regarding the attachment and operation may be obtained from S. A. Woods Machine Company, the planer specialists, Boston, U.S.A.

Calendars for 1910

A beautiful glimpse of scenery, entitled "The Woodland Road," is the feature of a handsome calendar distributed by C. A. Spencer, wholesale lumber dealer, 55 St. Francois Xavier street, Montreal. The picture is richly colored and mounted on a light brown board, which, with silk strings and calendar pad in the same color, make a most attractive ensemble.

Scratcherd & Son, wholesale dealers in hardwood lumber, Buffalo, N.Y., have favored the "Canada Lumberman" with their useful calendar pad, which has come to be a welcome New Year's visitor in a great many offices.

The Parry Sound Lumber Company's calendar for 1910 is tastefully designed, being mounted upon art tinted board and containing a colored and embossed reproduction of a painting, depicting a peaceful village scene.

The John Donogh Company, Limited, Traders Bank Building, Toronto, have issued an attractive calendar of useful proportions, and illustrated with a number of excellent views of lumbering, including camp, river and mill scenes.

H. P. Whiteside, Home Life Building, Toronto, selected a delightful colored and embossed painting of a birch canoe drifting upon pleasant waters and a pensive young lady resting therein. The color scheme and the subject are certain to make the calendar a favorite.

The alligator steam warping tug is portrayed in action upon the calendar issued by West & Peachey, of Simcoe, Ont. The calendar is a large one well suited for the office wall. This tug, which is favorably known in the United States and Canada, has been in successful operation on many of the northern lakes since 1889.

C. A. Larned, wholesale lumber dealer, of Phoenix, N.Y., shows excellent taste in the selection of his calendar design for 1910. The subject is "Sunshine," and the pretty girl whose picture graces the calendar will be as a strong ray of sunshine in many an office during the year. Not only is the girl pretty, but the calendar is tastefully conceived in pleasant soft colors.

It has been decided to hold the next annual meeting of the National Wholesale Lumber Dealers' Association of the United States at Cincinnati, O., on Wednesday and Thursday, March 2nd and 3rd, 1910. This is the first meeting of the association which has been held in the West in several years, and indications already point to the convention being one of the largest in the history of the organization.

WANTED & FOR SALE DEPARTMENT

PUBLISHERS' NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 15 cents per line each insertion, on the basis of 14 lines to an inch, payable in advance. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Employment Wanted" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies

Advertisements of "Employees Wanted" will be inserted at the rate of two cents a word net. Cash must accompany the order.

Advertisements must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue

WANTED—LUMBER, ETC.

Hard Maple Wanted

LARGE QUANTITY HARD MAPLE SAWN to order for delivery as soon as dry. Box 869 CANADA LUMBERMAN, Toronto. 4

White Pine C. & B.

FROM 1 TO 5 CARS OF 1½ AND 2 INCH White Pine, Common and Better. M. McKINNON, Box 337. Cobalt, Ont. tf

Elm and Maple Wanted

WANTED TWO AND THREE INCH SOFT Elm and four inch hard Maple. Give full particulars. Box 882, CANADA LUMBERMAN, Toronto. 2

Basswood and Ash Wanted

1" WINTER SAWN BASSWOOD, 1½" ASH. Will pay good price for good stock. Cash less 2% on cars inspection at mill. Box 873, CANADA LUMBERMAN. 3

Logs Wanted

BIRCH AND MAPLE LOGS DELIVERED at railroad or convenient for water shipment. Highest price for right quality. Box 850, CANADA LUMBERMAN, Toronto. 4

Basswood Wanted

TWO MILLION FEET OF WINTER CUT Basswood. Can use full run of logs. Cut to order. For particulars address Box 879, CANADA LUMBERMAN, Toronto. tf

Birch

WE ARE IN THE MARKET FOR 300,000 to 400,000 ft dry Birch of all thicknesses for this winter's shipment. State lowest prices with full particulars re quality, etc. Address THE LONDON LUMBER CO., London, Ont. 3

Birch, Basswood and Brown Ash

WE ARE IN WANT OF THE ABOVE stock, and will inspect and pay cash at the mill when quantities are large enough State what you have of each kind, when sawn, thickness, length and lowest price. Box 865 CANADA LUMBERMAN, Toronto. 2

Soft Elm Wanted

WE REQUIRE ONE MILLION FEET OF Soft Elm sawn to our sizes for delivery as soon as shipping dry; will pay good price for choice stock. Parties in a position to supply some of this please apply for further particulars to Box 849 Canada Lumberman, Toronto. tf

Cedar Wanted

WE WANT TO PURCHASE FOR QUICK shipment Square Cedar of merchantable quality, sizes 8 x 10, 10 x 10 and 10 x 12. Lengths 10 feet and up. We also want to contract for a considerable quantity for early spring shipment.

Write giving quantity you have and prices F.O.B. cars, to

Machinery for Sale

50 H. P. MONARCH PORTABLE BOILER and 40 h.p. Engine, refitted, ready for work. One 30 h.p., Bell portable Engine and Boiler on wheels refitted One No 0 light portable 3 block Saw Mill complete. THE ROBT. BELL ENGINE & THRESHER CO., LTD., Seaforth, Ont. tf

FOR SALE

WOODWORKING MACHINERY

1 27" revolving bed, double surface planer
2 26" revolving bed, double surface planers
1 20" Goldie & McCulloch surface planer
2 refitted 24" double surface planers
1 refitted 24" planer, matcher and moulder
1 new 24" Crescent surface planer
2 refitted 24" surface planers
1 new 18" planer and matcher
2 new 15" double surface planers and matchers
1 refitted 13" hedging planer
1 refitted 24" buzz planer with countershaft
1 new 16 buzz planer with countershaft
2 new 12" buzz planers with countershafts
1 refitted 8" universal wood worker
1 refitted 10" 4 side, inside moulder
1 refitted 18" 3 side moulder
2 refitted wood frame sash stickers
1 new No. 3 Fox foot power mitre machine
2 refitted power feed, rod and dowel machines
2 refitted hand feed, rod and dowel machines
1 refitted 20" patternmakers wood lathe
1 refitted 18" wood turning lathe
1 refitted 2 spindle horizontal boring machine
2 refitted single spindle horizontal boring machines
1 new iron top, 2 spindle wood shaper
1 new wood top, 2 spindle wood shaper
1 refittted power feed gang rip saw table
1 new dimension saw table with tilting attachments
1 new No 1 Crescent saw table
1 refitted double, rip and cross cut saw table
1 refitted variety saw table with countershaft
1 new wood frame swing cut off saw with table
2 new iron frame swing cut off saws
2 refitted iron frame swing cut off saws
1 nearly new roller top cordwood saw table
2 refitted handle and spoke sawing machines
1 refitted 40" pedestal band saw
1 refitted 38" pedestal band saw
1 new 26" Crescent pedestal band saw
1 refitted 54" band resawing machine
1 refitted Rogers vertical resawing machine
1 refitted 30" double drum sander with countershaft
2 refitted 24" single drum sanders
1 nearly new 32" disc sander with boring attachment
2 new No. 6 Lion universal wood trimmers
1 new No. 5A universal bench wood trimmer
9 new No. 4 Lion universal bench wood trimmers
1 new Champion hardwood floor scraper
1 nearly new Cowan band saw filing machine
1 refitted box board matcher with countershaft
1 refitted 15 nail, box nailing machine
1 refitted 8 nail, box nailing machine
1 refitted horizontal bracket carving machine
1 new Dominion band saw set
1 refitted hand power spoke tenoner
50 new 36" Palmer patent glueing clamps

Sale of Valuable Timber Limits

In the Lake Temiscamingue District

THE UNDERSIGNED OFFER FOR SALE by tender, Berths Number 1 in the Second Range and No. 1 in the Third Range, Block A., in the Province of Quebec

These births lie immediately east of the interprovincial boundary line, for a distance of twenty miles, measuring north from the tenth mile post north of Lake Temiscamingue

They have an area, as described by the current licenses of ninety and one-half square miles, and the timber growth is mostly spruce of a superior quality.

Tenders will be received up to twelve o'clock noon of the FIRST DAY OF MARCH NEXT. The highest nor any tender not necessarily accepted.

Any further information as to terms and conditions of sale, or other particulars, can be had by inquiry from the owners.

THE BRONSON COMPANY.

Ottawa, 1st December, 1909.

How $5,000 will net you $3,000 to $5,000 a year for life

READ CAREFULLY

MILL SUPERINTENDENT. WE OWN IN Nova Scotia new small complete mill, capacity 15,000 to 20,000, lath mill 30,000, located mouth of river, tide water, that will furnish spruce and white pine for 25 years guaranteed. Cheap rates Boston and New York. Help—Scotch descent, plentiful. Absolutely no other industry near. 80% wages paid through commissary, which will net $1000 year profit. Owners live a thousand miles away, not practical mill men, but will market all material at $3 to $4 per thousand, net profit to you. To one or more thrifty economical practical men, this is a chance of a lifetime.

Small Timber Limit for Sale

FORTY-TWO ACRES VIRGIN FOREST; fifty miles from Toronto; 1¼ miles from railroad station; comprising maple, elm, beech, hemlock, basswood, cedar. Apply Box 834, CANADA LUMBERMAN, Toronto. tf

Pulpwood Propositions

AMERICAN PAPER MILL OWNERS ARE inquiring for Quebec holdings because they simply must have the raw material in spite of tariffs or anything else. To those interested we say let us show you the wealth of pulp tributary to our town as a manufacturing point and coming either from Ontario or Quebec waters to Lake Temiskaming. CYRIL T. YOUNG, Chairman Publicity Dept Board of Trade, Haileybury. 5

Sale of Timber at Rondeau Park

A QUANTITY OF STANDING TIMBER ON Rondeau Provincial Park, County of Kent, Ontario, is offered for sale by public tender on MONDAY, 3RD JANUARY, 1910, consisting of basswood, ash, elm, beech, maple, oak, hickory and other kinds of mature timber, or timber requiring to be cut and removed in the proper management of the forest.

For particulars and conditions of sale apply to

F. COCHRANE,
Minister of Lands, Forests and Mines.

Toronto, 29th November, 1909. 1

Machinery for Sale

SMALL BAND SAW MILL COMPLETE with Steel Carriage, Saws and Filing-room Tools, Live Rolls, Gang Edger, Slab Slasher, Butting Saws Steel Conveyor Chain, Shingle Machine, Jointer and 2 Packing Boxes. Lath Machine and Bolter, Shafting and Belting, etc.

Also the complete outfit of Hardwood Flooring Factory, Planers Matchers, End-Matcher, Boring Machine, Band Rip Saw, Surfacers single and double, Cut Off Saws, Knife Grinders and Balancing Tools, Dry Kiln Outfit with Steel Cars, etc. Buzz Planer, Turning Lathe and other tools. All will be sold cheap for cash or lumber taken in exchange. Apply to J. S. FINDLAY, Owen Sound, Ont. tf

Utilizing Sawdust

There are many ways of putting sawdust to practical use, so that it is nowadays but rarely that a manufacturer is unprogressive enough not to realize something on his saw waste. One of the most important uses for sawdust is in the manufacture of artificial woods, the sawdust being mixed with tar resin and pressed at high temperature in moulds, after which it can be cut, planed and bored like ordinary wood. It is susceptible of a high polish and is altogether quite as satisfactory as solid wood.

When mixed with some sort of binding material sawdust is poured into moulds, making imitations of wood carving that are very handsome. By this means mouldings and decorative carvings of all kinds, including panels for the walls and ceilings of houses, furniture ornaments, etc., can be made.

From a mixture of the sawdust from the finer hardwoods a substance known as wood marble is made; it is mixed with ivory waste to which pigments are sometimes added, waterglass and glue being employed as a binder. The substance thus made is cut into veneers which may be highly polished and are not easily distinguished from the finest marbles. Oxalic acid, an important commercial article, is produced nowadays largely from sawdust. A fine sifted sawdust, known as "wood meal," is used as an imitation of pollen in the manufacture of artificial flowers. Beech sawdust is useful for polishing gold, and in France wood meal is employed to dry up ink in place of the old fashioned sand, and as a substitute for blotting paper. For this purpose the kerf of hardwoods is principally used, and it is dyed dainty colors and perfumed so as to make it a pleasing article about a woman's desk.

Sawdust is the source of much of the cellulose now employed for the manufacture of explosives. Eventually, however, its most important use will undoubtedly be in the production of sugar and alcohol. Sawdust is practically all cellulose, and the latter is convertible into sugar, which by processes already well understood can be transformed into alcohol.

Consumption of Wood in Spools

Small things are not to be overlooked in considering the problems of the future timber supply. The match maker has as much trouble in getting the grade of wood necessary for his business as the dealer in telegraph poles.

One of the industries which deals with small things, yet which is one of the utmost importance to the country's commerce, is the manufacture and export of spool wood. In the United States this business is peculiar to the New England States, and is centred in Maine. Spool factories of this State are now turning out 800,000,000 spools annually, with a market value of nearly $1,000,000.

The best quality of timber is used for the manufacture of spools. White birch, which is used almost exclusively for this industry, reaches the factory in the form of bars from ½ to 2 9-16 inches square, and from 2⅜ to 4 feet long. These bars must be absolutely clear. The birch is cut in winter and sawed in small portable mills, which operate near some railroad line, about 2⅛ cords being required for 1,000 feet of bars. After sawing, the bars are piled crisscross, in order to facilitate seasoning, and protected from the weather, are allowed to season until June. The spool-bar mills in Maine turn out about 15,000,000 feet of bars during the year, and approximately the same amount of material is manufactured into spools in the State.

The machines for making spools are complicated, and require skilled men for their operation. The spools drop from the lathe at the rate of one per second, and must be perfectly uniform and true. The finished spools are marketed in the U. S. principally in Rhode Island, Connecticut, New York and New Jersey, while the spool-bars are largely exported to Greenock and Glasgow, Scotland, and to Hull and Fleetwood, England. Shipments to these points are made mostly from Bangor, as much as 8,000,000 feet having been sent from that port in a season."

Warship's Teak Ribs

In the residence which I. N. Phelps Stokes is building at Greenwich, Conn., the timbers of the Wellington, once a British battleship, will find final repose.

The timbers will be used as rafters in the great dining-room and as supports of the new house which Mr. Stokes is having constructed at an estimated cost of $200,000.

The Wellington has many historic associations, but Mr. Stokes when he brought the timbers was indulging no antiquarian tendencies. His idea was to get a good strong wood. The wood is teak, which has great durability. There are firms in England which make a specialty of breaking old vessels to procure this wood.

Countess Buys a Sawmill

Hungarian aristocratic circles are perturbed over the act of Countess Szechenyi, formerly Miss Gladys Vanderbilt, who recently purchased a large sawmill at Remete Vasgyar. Connected with the mill is an extensive manufacturing plant which turns out all kinds of cabinet work. The Hungarian women of high rank admire the young American woman's enterprise and envy her business ability, but hint that it is a startling departure on the part of one of Hungary's noblest families. They deprecate the business move of the Countess on the ground that it is beneath the dignity of her station in life.

Forestry in the United States

"One of the most serious obstacles to the practice of forestry in some parts of the United States is the method of taxation of timber lands," said Gifford Pinchot in a recent address at Portland, Ore. "Timber is a crop which requires many years to mature. If cut over lands are taxed during the time that the new crop is growing, at such a rate that owners cannot afford to hold them until the timber has matured, then reforestation will be exceedingly difficult. But if the land can be taxed simply for its value, irrespective of timber, while the crop is growing, and then the timber be taxed at the time it is cut, the tax system will not stand in the way of reforestation, and both the owner of the lands and the taxing body will benefit.

"If forestry methods are properly applied, particularly in Oregon, the timber can be perpetuated and furnish for use between 2,000,000,000 and 3,000,000,000 feet of lumber annually. This will be abundant to meet all demands from the State, as I understand there is now disposed of through the lumber market about 1,600,000,000 feet annually. You have ideal conditions for reforestation and with the encouraging outlook in the Pacific northwest for this industry I hope to see every advantage taken of so favorable a situation."

Prussian Forestry

The Prussian national forests comprise about 7,000,000 acres. Marked success has followed the scientific care of the government's timber. In 1850 the yield is given at 20 cubic feet per acre; in 1865, 24 cubic feet; in 1890, 52 cubic feet, and in 1904, 65 cubic feet per acre, showing that the Prussian forest management has resulted in an increase in the rate of production of just 225 per cent. in 74 years. According to available figures the lumber consumption in the United States exceeds timber reproduction in the ratio of about three to one, so that if the same success can be achieved there as has followed forestry efforts in Prussia, forest reproduction will keep pace with consumption.

TIMBER MAPS

The undersigned can furnish to order timber and township maps of any section of New Ontario. Specialty of Abitibi timber maps. The advertiser was five years in the Ontario Survey Branch and knows the country thoroughly.

Review of Current Trade Conditions

Ontario

The holiday season has made the lumber markets quiet. Everything, however, is steady, and in some lines a stiffening is noticeable. Lath are getting exceedingly scarce. Mill run white pine, 1x10 and 1x8, are also very scarce, some manufacturers reporting that they are completely cleaned out of these sizes. Hemlock manufacturers are asking higher prices, but buyers are not very keen about an advance. The prospects for 1910 business in pine are very promising. Stocks generally in the Georgian bay district are low and manufacturers are feeling quite independent, whereas a year ago at this time they were inclined to do anything to make sales. One of the largest manufacturers of white pine in the Georgian bay district has made a sale of two million feet, to be delivered next season, at prices in advance of those now prevailing.

Market conditions at Ottawa are quiet, but every indication points to a brisk and firm market early in 1910. There is a scarcity of good sidings, shorts and strips, and their prices are firm. Thick pine shipping cull sidings are especially active, and the price recently advanced $1 a thousand. The demand for 12-inch spruce stock is also strong and a lot of dry stock on hand has been disposed of. Stocktaking is prevalent and the indications are that prices for the better grades will continue firm with a tendency to advance, while the poorer grades will not be any stronger. For pine shipping cull strips the price has fallen a dollar, to $18 to $20, and shipping cull shorts are also lower at $16 to $19. The recent storms have resulted in the demand for telegraph poles firming up, and nearly all the short lengths have been cleaned up. The price for 30-foot lengths has advanced from a minimum of $1.40 to $1.60, and 35-foot poles are 25 cents higher. Forty-five foot poles are 50 cents higher, and 50-foot poles are about a dollar higher on the minimum price

The market in western Ontario has stiffened somewhat in the past fortnight. The high grades of white pine at Sarnia are selling at an advance of from $3 to $7. No. 1, No. 2 and No. 3 cuts have also stiffened and the price is from $1 to $3 higher. There is also a better demand for the barn grades and the prices have been advanced by from $2 to $6. No. 1 lath 32-inch have advanced 25 cents, to $1.50. British Columbia fir at Toronto has been advanced a dollar, to be effective from the first of the year. B. C. cedar shingles at Toronto have been marked up 10 cents.

Eastern Canada

The arrival of the really cold weather has been a boon to lumbering operations in New Brunswick, but the absence of snow in the southern section of the province has hampered work materially. Conditions have been detrimental so far as the woods operations are concerned, and the expense of the camps has been greater than usual. Manufacturing has practically come to an end at St. John for the season, and the absence of snow in the southern part of the province has prevented the portable mills from commencing operations.

Shipments of English spruce in parcels, by the winter liners, have been fewer than up to this time in the previous season. It is believed that the quantity available for shipment by winter liners will be less than it was in the season of 1908-1909. "English" spruce deals at St. John are unchanged, but there is a tendency towards higher prices. Stocks on hand are only moderate and St. John dealers and manufacturers are in no hurry to market their holdings. The price of "English" spruce deals at St. John is about $15 to $15.50 on the usual specifications.

Cedar shingles for export to Boston are quiet and unchanged and shipments during the next few months will probably be light, as is customary during the winter. Stocks on hand at present amount to about 4,500,000 of high grades. Dutiable "extras" are now selling at St. John at about $2.75 per thousand, and "clears" from $2.20 to $2.30 per thousand.

Boston reports state that the spruce trade has been quiet for the past fortnight, without any indication of an early improvement. A few buyers have placed orders for delivery of cargo lots next spring. The prices on these orders vary considerably. The lack of snow in the producing country has led to a feeling that prices of spruce and all eastern lumber will be higher. Frames are not in much demand. Quotations for nine-inch and under range from $24 to $24.50 on the part of sellers. Random also is quiet and there is not much demand for spruce boards.

Reports from Quebec show a stiffening in the price of first class Ottawa waney white pine in the raft 18-inch average, which sells at 74 to 76 cents per cubic foot. Quebec spruce deals are also firm and are selling at $17 to $18 per thousand. There is also a firmer feeling in elm. White pine at Montreal is steadily advancing and stocks are scarce. Spruce is quiet at Montreal and American hardwood stocks are also advancing in price owing to scarcity.

Western Canada

Lumber markets in British Columbia are reported to be in a very satisfactory condition. The recent advance of $1 is well maintained and stocks are light. Business has been rather quiet during the past fortnight, but with the new year a revival is expected. Shingles also are reported to be in fair demand at $1.70, with a promising outlook. There has been very little change in the log situation. The cold weather has had the effect of closing down some of the camps and the output for the next three months will be very light. Good camp run of fir and spruce is worth $9, cedar bringing from $7.50 to $14, according to quality. The prospects for 1910 for both loggers and millmen are very bright. The stock of logs on hand at present is very light, considering the time of year. The price of lumber has been advanced and will likely advance again after the first of the year and the logger will expect to share in the increased prosperity of the lumber industry. It is believed that in three months' time good merchantable logs will be selling at $12.

United States

Holiday conditions had quite a deterrent effect upon lumber markets in the United States at the end of the year, and no decided revival is expected until the middle of January. Northern pine at Chicago was affected by the holiday conditions probably more than any other class of lumber. At Buffalo the December demand for northern pine was good, and according to reports from the box factories there will soon be no complaint of too much low grade. The demand for it is much improved already. The advancing prices of high grades are helping the low grade market. At New York there is a fair demand for mixed cars. There is still a lively enquiry at Chicago for all kinds of railroad material. There is also a strong demand for spruce siding, but it is almost impossible to make deliveries on account of the strike in the northwest.

The reappearance of enquiries for southern pine at Chicago lead to a belief that country yards are preparing to place large orders for this class of material. The demand for coast shingles at Chicago is quiet, but wholesalers and retailers are stocking up to some extent. Prices have advanced somewhat of late and now clears are bringing $3.27 and stars $2.85. White cedars are quite steady. Lath are firm and selling well,

Always ready to quote on heavy construction timber, bridge timber, ship timber, etc.

None better at filling your requirements in yard stock.

Cleveland-Sarnia Saw Mills Co., Limited

SARNIA, ONTARIO

At Buffalo, the shingle trade is strong, when one considers the quantity of shingles which have been handled there during the lake season. The surplus appears to be all gone and the prices are firm. There is only a fair stock of red cedars on hand for the winter and prices are expected to hold firm. The cooperage situation at Chicago shows no change.

Great Britain

The last arrivals of pine deals for the season from Canada have reached Liverpool and English buyers realize their position pretty generally in regard to the higher tendency of prices on account of the United States demand for this wood. The last arrivals of spruce deals in the Mersey were of small quantity and sold at about £8 c.i.f. for Manchester and a little less to Liverpool. Pitch pine transactions are very scarce. Manchester reports a slow movement in spruce, but if any changes occur in prices they will be in the direction of an advance. In spite of the holiday season, reports from Liverpool and other northern markets show a fairly good turnover. Bristol trade is quiet, but much confidence is expressed regarding the trade during the coming season, especially after the election disturbances are over. At Cardiff, trade is quiet and prices about steady. Spruce is being somewhat pressed by those who are large holders. At Glasgow business has eased off, but there is no appearance of weakness about the market. The tendency of values is a steadily advancing one. Good spruce deals are very firm in price just now, being dearer probably than for some years past, and it is making the sale of them somewhat slow, the exceptionally light stock of these causing holders to be indisposed to make concessions. While the stock of pine is also very limited, there is very little demand, though on the other hand there is no pressure to sell.

Market Correspondence

Ottawa Valley News—Prices Continue Firm

Ottawa, Dec. 27.—Lumbermen find little in market conditions to absorb their attention these days. Any fluctuations in prices, however, are encouraging and point to a firm market when the expected brisk trade comes in the new year. All good sidings, shorts and strips are scarce and usually bring the top figures quoted in the "Canada Lumberman's" list of prices. Especial activity in thick pine shipping cull sidings sent the price up a dollar a thousand in the last week. There was evidence of an unusual demand for 12-inch spruce and a lot of dry stock on hand was bought up for the box trade. Lumbermen are busy stock taking and until this work is completed there will be no good basis on which to adjust prices. As far as the stocks on hand have been looked over, there is evidence of a further accentuation of the high prices for better grades of lumber and low prices or the poorer grades. Pine shipping cull strips, and pine shipping cull shorts are selling as low as $18 and $16 per thousand respectively, but, of course, higher suotations are the more general rule. Stock taking reveals that nearly all the short lengths of telegraph poles were cleaned up to fill the demand following the November storm which destroyed some 4,000 poles in eastern Ontario. In fact, there is little in stock now except long poles. The 30-foot pole has gone up from a minimum of $1.40 to $1.60 each, and there has been a 25-cent advance in 35-foot poles. Forty-five-foot poles are 50 cents dearer, and there is also an advance in 50-foot lengths.

Shanty work received the customary set back owing to hands returning to their homes for Christmas celebration. A small percentage of these men never return, and, in consequence, hiring to replace the crews has been necessary. So far log cutting and road making have been the only work in most of the upper Ottawa camps. Snow is plentiful, but the lack of frost hindered hauling operations. The Shepard & Morse Lumber Company have just heard that many good roads have been laid out in the Montreal river limits and teamsters are only waiting for a little more frost to make hauling easy. The Gatineau river district was visited with heavier snowfalls.

Mr. G. B. Greene, manager of the Upper Ottawa Improvement Company, informs the "Canada Lumberman" that the drive of logs and pulpwood was greater in the past season than any previous time on record. From the large quantity of logs consumed in Ottawa river mills he believes the production of lumber in 1909 was equal to, if not greater, than any recent year. With a knowledge of the stock of raw material held by most of the Ottawa valley lumbermen, Mr. Greene is able to state that there are not so many logs between the axe and the mill as last year. Still, in the stretch of river from Coulonge to Quyon there is probably a record quantity of logs. As soon as the ice forms the Upper Ottawa Improvement Company will make repairs in booms, etc., at the head of Lake Temiskaming, Des Joachins, Fort William, Allumette, Quyon, Thompson's Bay and Deschenes. The company are having a new steamer built by the Collingwood Shipbuilding Company, to operate on Chats Lake to replace the J L. Murphy. It will be a propeller steel boat with a 7-foot 9-inch wheel. One of the reasons for the large production of lumber last summer, despite the setback to sawing by spring floods, was the regular supply of logs given in the mills by the Upper Ottawa Improvement Company. This was partially made possible by the season's high water, but chiefly by the reserve boom at Quyon, which was enlarged to a capacity of one million logs to facilitate the company's operations. The trouble in previous seasons experienced by lumbermen whose logs were blocked by other logs, was obviated by this storage scheme. The E. B. Eddy Company had complained of shortage of pulpwood at one time, but their stock was well ahead before the end of the season.

J. R. Booth, who is just completing a power house of 9,000 h.p., at the foot of the Chaudiere, expects to have it operating early in January. When the power house gets under way its first work will be to turn the wheels in a new cardboard mill built this ceason at a cost of $235,000. Mr. Booth's new power house is the centre of attraction of electricians from far and near. He has developed so much energy at a moderate cost that there is some talk of using it to drive the lumber mill. So far, however, the plans are made only for the operation of the board mill and sulphite factory by the new electric plant. While not lessening his lumber operations a particle, Mr. Booth is going much more actively into the paper industry. Besides the board mill and power plant built this year, he has well under way a new pulp mill which will increase by 60 per cent. his production of pulp. All this pulp will be consumed on his own premises.

Anchor ice has disturbed operations in the E. B. Eddy mills. The snow has also increased the difficulty of getting raw material and hinders the work of shipping.

New Brunswick News—Parcel Shipments Light

St. John, N.B., Dec. 24.—Since last writing conditions at the logging centres throughout the province have materially improved. The setting in of the cold weather—while the frost has been only moderate—has been a great boon to lumbermen, and better work is being done. In the northern sections there is, on an average, a foot of snow, and this has been, of course, a great help. In the southern section of the province there is practically no snow, and the work is hampered accordingly. On the whole the season, up till a few days ago when the first hard frost came, is considered by local people as being perhaps the most arduous and expensive season during the past quarter of a century.

The manufacturing season might now be considered practically at an end so far as the mills at this city and in the county are concerned. There are two of the local mills running, but these will each close down for a period of several weeks early in the year to effect the annual repairs. So far as manufacturing is concerned, this section ceases to be important from now until late in April. The lack of snow in the southern sections of the province has practically prevented the portable mills from beginning operations to any important extent.

Parcel shipments of English spruce deals by the winter liners have been lighter during the present season than was the case up to the same date last year. Receipts from bay points have been lighter and the tendency of local dealers seems to be to hold their goods until later in the season. While it is almost an impossibility to make any estimate in regard to shipments through this channel (the sources of supply are so many and so various) it is generally conceded that the total quantity available to be shipped by the winter liners will be less than went forward during the winter of 1908-1909.

The local market for "English" spruce deals has shown little change although the general tone has an always growing tendency in the direction of a higher level in values. With the moderate stocks on hand and the probabilities that receipts from outside points during the winter will not be excessive, local dealers and manufacturers are able to pursue a policy that is the reverse of hasty in putting their "English" deals on the market. Current prices seem to be of a somewhat contradictory nature just at present, although there is no doubt that an enquirer for "English" spruce deals would be quoted from $15 to $15.50 on a specification containing say, 50 per cent. sevens and eights, 40 per cent. nines, and 10 per cent. elevens and up, f.o.b. steamer, St. John.

The trade in cedar shingles for export to Boston and vicinity has the element of quiet as its most prominent characteristic. Conditions are much the same as have prevailed in this line during the past five or six months, and, locally at least, little change is looked for until the spring business opens up. With the closing of most of the mills at this port and on the river, the output of this particular line has been curtailed by 80 per cent. and for the next three months a similar condition of affairs will continue. These conditions are quite as is usual at this time of year, when shipments of cedar shingles are always few, especially when trade in that line is dull. These shipments will be limited to present stocks (which would not aggregate more than four and one-half millions of high grades) and such quantities as are produced at the two mills now running.

The present local value of dutiable "extras" is in the vicinity of $2.75 per thousand, while "clears" would, no doubt, be quoted at from $2.20 to $2.30 per thousand.

The current freight rates on shingles by schooner are 25c per thousand to Boston and 27½c to Sound ports .

Lumber Matters in the Law Courts

Suit to Secure Bank's Dealing with Lumber Company — The Deadman's Island Case

Alleged Mismanagement—Hugh S. Brennan, of Hamilton, is suing the Bank of Hamilton, James Turnbull, Henry H. Watson, William Lees and William Milne, to secure the bank's dealing with the Nipissing Lumber Company, the Lentz Lumber Company, an dthe Mississaga Lumber Co., and with all securities held by the bank and belonging to those companies or to the plaintiff. Watson, Lees and Milne are directors of the Nipissing Lumber Company, which operates the "Spanish Mill" and the "Kitchener" and "Roberts" limits. The plaintiff alleges mismanagement and sues for the amount said to have been lost as a result. The plaintiff is the chief shareholder of the Nipissing Company, and asks the court to restrain the defendants from selling the "Cache Bay" mill.

Action for Breach of Contract—Bartram Brothers, of Ottawa, are suing the Riordon Paper Mills Company for $2,000 for alleged breach of contract Bartram Brothers were engaged by the Riordon Company to cut a quantity of timber in Labelle township. When they were about to start work, and had the men hired and outfits ready, it was discovered that the lot they were about to commence work on belonged to the Maclaren Company. The Riordon Company, it is alleged, immediately ordered Bartram Bros. to stop work, and refused to remunerate them for their outlay in getting ready for the job. As there is no Superior Court judge in the Hull district, the evidence taken will be submitted to one of the Superior Court judges at Montreal.

Breach of Contract—In the case of Mr. Robert Smith, of Durham, Ont., v. Walker & Filshie, of Mount Forest, Ont., plaintiff sued for damages on breach of contract. He contracted to cut 300,000 feet of lumber. After cutting 84,000 feet, defendants did not allow him to proceed, but agreed to pay for the quantity cut. Plaintiff claimed $200 damages. Verdict, $100 and costs.

Deadman's Island Case—The contest between the city of Vancouver and Theodore Ludgate and the Vancouver Lumber Company for the possession of Deadman's Island has reached the courts. The city has been arraigned in the Superior Court of the province as defendants in a suit brought by the lumber company, which seeks to recover possession under the Ludgate lease of 1889 from the Dominion Government. Twice Mr. Ludgate, who is a prominent lumberman and limit holder, has endeavored to take possession of the island, and each time the city has driven his men off. Vancouver contends that Deadman's Island forms a part of Stanley Park.

Mr. O. E. Elsemore on the Pulpwood Situation

Mr. O. E. Elsemore, of Toronto, who for many years was a very well known lumberman living at Bay City, Mich., was interviewed by the "Detroit News" during a recent visit to Detroit, upon the pulpwood and other timber conditions in Canada. Mr. Elsemore expressed himself in the following interesting manner:

"The eastern provinces find a market in New York and the New England States. It is not true that Canada has no other market for her forest product than the States. I have observed many vessels at different times loading large cargoes of spruce lumber and other forest products bound for such ports as Buenos Ayres, Kingston, Jamaica; Lisbon, Portugal, and Berlin, Germany Several pulp and paper companies in the Province of Quebec ship largely to London and English markets. When in Quebec, not long since, I noticed the steamship Empress of Britain taking on 500 tons of paper for Liverpool.

"There is no evidence of any tariff discrimination against the United States, on the part of Canada, so far as pulpwood and wood pulp are concerned, and pulpwood seems to be the bone of contention. First, we are seeking to conserve the pulpwood forests; and second, we desire to foster home industries. This would hardly seem to merit any retaliatory measures on the part of the United States. Perhaps it would be just as well if the forestry authorities in the United States would adopt a similar policy of conservation.

"I understand at the present time there is a large raft of sawlogs, containing some eight million feet, in course of construction near Seattle, Wash., on the Pacific coast. This raft is to be towed to Japan, and should this experiment prove successful it will not be long until there will be seen as many rafts of logs crossing the Pacific ocean, as there will be seen airships in the air.

"What next? The State of Washington will very soon be obliged to pattern after Ontario, and pass an Act compelling the manufacture of all forest products in the United States, in the interest of conservation of our natural resources. It would seem that it were up to the forestry authorities in Washington to give this matter some thought, which the Roosevelts, Pinchots and other expert foresters have declared to be the subject of 'utmost importance.'

"But this timely warning as to the rapid depletion of the forests everywhere seems to pass unheeded. Thirty years ago I heard it asserted that there was an inexhaustible supply of pine timber in the State of Michigan; that no one would live to see the last pine tree cut. The lumbermen of to-day do not know any more of the conditions of ten years hence than the foresters of 30 years ago knew what the conditions were going to be to-day, in Canada.

"I repeat that the eastern provinces of Canada have no more standing timber than they will be likely to need for Canada's home consumption during the next ten years, should the population continue to increase as it has in the last decade. The great law of supply and demand will still continue in force, and no amount of legislation will ever change old mother nature's programme. She will still continue to do business at the same old stand and old Father Time absolutely refuses to change his gait."

Trade Enquiries

The Dominion Government Trade and Commerce reports contain the following trade enquireies. Readers of the "Canada Lumberman" may obtain the names of enquirers by writing us, enclosing stamped envelope and stating number of enquiry:

1722. Oak squares.—A Manchester firm asks for sizes and prices of oak squares from Canadian manufacturers.

1721. Oak.—A Manchester firm wishes to obtain dimensions and prices of oak from Canadian shippers.

1728. Pine doors.—A Liverpool firm asks for prices and dimensions of pine doors from Canadian shippers.

1729. Pick handles.—A Liverpool firm asks for prices of pick handles, all sizes, from Canadian manufacturers.

1736. Broom handles.—A Manchester firm asks for prices of broom handles, all sizes, from Canadian manufacturers.

1741. Agent.—A Manchester firm wishes to appoint a Canadian agent for the sale of all kinds of belting and belting laces.

1899. Ash boards.—A Manchester firm wishes to correspond with Canadian shippers of ash boards.

1907. Box shooks.—A Manchester firm asks for prices and dimensions of box shooks from Canadian manufacturers.

1908. Pine deal.—A Lancashire firm asks for prices and sizes of pine deals from Canadian shippers.

1777. Wood-mill appliances.—A firm of saw-mill engineers in England, being the patentees and makers of safety circular wood planer cutter blocks, saw-gaurds and saw-sharpeners wish to be referred to Canadian importers.

1911. Yellow pine boards.—A Yorkshire firm will be glad to receive dimensions and prices of yellow-pine boards from Canadian exporters of same.

Recent Publications

"The Whole Idea of Xmas" is the title of No. 9, of the Berlin Machine Works Bulletin. Page one contains a breezy Christmas sketch and the balance of the bulletin is devoted to handsomely illustrated articles relating to Berlin machinery.

McFarlane, Thompson & Anderson Manufacturing Company, of Fredericton, N.B., have issued an attractive repair list of parts of the well known Dunbar shingle machine. The list is well illustrated and will be of much use to the numerous users of this machine. In a booklet entitled "The Factory Behind the Machines," they also give some interesting facts relating to the N. B. Foundry & Machine Shop, where the Dunbar shingle machine, and sappers, cedar cut offs, etc., are manufactured. The company further draw attention in a folder to Robertson's babbitt metals, made by the James Robertson Company, Limited, 144 William street, Montreal, which they also handle.

"A Treatise on the Protection of Forests from Fire," by W. C. J. Hall and B. L. O'Hara, superintendent and assistant superintendent of the Bureau of Forestry of the Province of Quebec, has been published under the authority of the Provincial Department of Lands and Forests. The booklet contains a large quantity of practical information relating to the prevention and fighting of forest fires. It would be a valuable work for any timber limit owner to have in his possession. The booklet has the merit of being both concise and to the point. Its writers are to be congratulated for having brought together so much practical information upon a subject which is treated far too often in merely a theoretical fashion.

"Lumber Shed Construction," by Met L. Saley. Russian linen, 176 pages, 8x11, with plans and illustrations. Price, $1.50 (express prepaid in United States and Canada). Published by the "American Lumberman," Chicago, Ill.—This book is one of the handsomest and most useful publications devoted to lumber matters which have recently appeared. It is attractively published on art tinted paper with handsome type and with the various subjects arranged in a systematic manner. The illustrations are extensive and greatly increase the value. The subjects dealt with include sheds for retail lumber yards, lime houses, coal sheds, sash and door rooms, offices and shed and yard conveniences. Mr. Saley's writings are too well known to the lumber trade to require any comment. The articles in this book are on a par with his best work and will repay careful study.

EDGINGS

Ontario

A new sawmill is being built a short distance in the rear of the Markdale, Ont., furniture factory.

P. P. Elliott has closed a contract with the C. N. R. to take out 250,000 ties this winter along the C. N. R. near Banning, Ont.

J. R. Booth, Otawa, Ont., is considering plans for the installation of a pulpwood conveyor in connection with his mill. The conveyor will have a length of 1,500 feet.

G. Kastner has leased the mill of W. G. Simmie, Clavering, Ont., and will put a stock in the yards from three-quater to one million feet which will be cut next spring. He has a number of men now working at Mountain Lake getting out logs.

The town of Mount Forest, Ont., will vote on Jan. 3 upon a by-law to grant Leslie Bros.' planing mill, sash and door factory, a fixed assessment of $2,650 for a period of ten years, and also free water and light, in consideration of the firm enlarging their plant.

The Dominion Railway Commission has sent out a draft order requiring all railway companies to construct at all points known as "flag stations," shelter or waiting rooms for passengers and freight, the same to be done within six months. Where the revenue is not less than $15,000 the depot shall be what is known as No. 2 standard.

The steamer F. A. Myers, of Buffalo, foundered about 25 miles northeast of the southeast shoal light at Port Colborne, Ont., on Dec. 18. The Myers was bound from Boyne City, Mich., to Buffalo, with about 600,000 feet of maple lumber. The crew of 15 men and one woman were taken off by the steamer Mapleton, Capt. A. E. Stinson.

Mr. D. E. Wallace of Thamesville, Ont., is making further additions to his sawmill. The latest addition is a marking room, for marking off the lumber, which has been added at the west of the main building. It is also Mr. Wallace's intention to build new store sheds. In order to increase the capacity an additional 35 h.p. engine has been installed making the total horse power used now nearly 100. Mr. Wallace has recently purchased a well timbered farm of 135 acres near Newbury and another one of 50 acres near Mount Brydges. In order to handle the timber at these points to best advantage, a portable mill is used and taken from place to place as occasion demands. In addition to the regular sawmill business, Mr. Wallace manufactures hub blocks, spoke billets, neckyokes, single-trees, handles, baseball bats, etc. The average shipments are now between two and three cars per week. At the present time there are about 40 men employed in the mill and 10 or 15 more in the bush, while at Mount Mrydges there is another gang of about 20, making about 75 men employed altogether.

Eastern Provinces

M. Guenette, lumber merchant, Montreal, Que., is stated to have assigned.

The assets of Eusebe Lacasse, sawmill proprietor, Barrington, Que., are to be sold.

T. H. Mossicotte, lumber merchant, St. Thecle, Que., is stated to have assigned.

The Austin Lumber Company, Cap St. Ignace and Quebec, is reported to be in liquidation.

S. Cole, sawmill proprietor, Morrison Siding, Que., have had their mill destroyed by fire.

The N. B. Howard Lumber & Trading Company, Limited, of Melissa, Ont., has obtained a charter.

It is reported that the J. B. Snowball Company will equip their sawmill at Chatham, N.B., for a planing and woodworking factory.

The C. C. Manuel & Sons Company, of Richford, Vt., is building a plant in Sutton, Que., for the manufacture of butter dishes, clothes pins and veneers.

The Standard Chemical Company are building a addition to their plant at Fasset, Que., for the storage of refuse from the Haskell Lumber Company.

The Guay Lumber Company, Limited, Montreal, have been incorporated with capital of $49,500. The incorporators are: L. A. Guay, B. Ball and J. Findlay, all of Montreal.

The Fassett Lumber Company, Limited, Fassett, Que., have been incorporated with capital of $1,000,000. The incorporators are L. Boyer and Louis Gosselin, advocates, both of Montreal.
They are putting in two Jeffrey elevators in connection with this addition.

The McLeod Pulp Paper Company, of Liverpool, N.S., intend to put in a pulpwood conveyor next spring for storing pulpwood in the yard and reclaiming it from the yard to the saw house.

The Nominigue Pulpwood Supply Company, Limited, Montreal, has been incorporated with a capital of $20,000. The incorporators are; A. Ecrement, C. A. Wilson and A Rives Hall, all of Montreal, Que.

Hon. Jules Allard, Minister of Lands and Forests of Quebec, states that a conference will soon be held between the Quebec Government and the Intercolonial Railway Commissioners with a view to further protection of property along the Government system.

The lumber property situated near Grand Lake, N.S., and owned by Sillikers and other Amherst parties, has beeen sold to Crowe Brothers, of Halifax, and Mr. H. C. Campbell, of Lower Stewiacke. The latter is to be manager. It is expected that lumbering operations will be commenced at an early date.

The Dominion Government is considering plans for the electrification of the National Transcontinental Railway along the portion of the line running through New Brunswick and Quebec, in order to prevent forest fires. The portion in New Brunswick to be electrified would be 260 miles in length, from the boundary to Moncton.

A new sawmill will probably be established on the site of the Estey mill in St. John, N.B. Negotiations for the purchase of the property are being carried on by R. W. McLellan. If the deal goes through Mr. McLellan will

dispose of his interest in the McLellan-Smith Lumber Company, of Oromocto, to Luther Smith. James M. Scott, of the Scott Lumber Company, will be manager of the new mill.

Western Canada

The largest vessel that has yet come up the Fraser river, the freighter Sandow, will load this month a cargo of about three million feet of lumber for the Antipodes.

The Westholme Lumber Company, of Victoria, B.C., have taken a 40-year yease of property on Government street, near Johnson street, and a three-storey brick building is being erected in which they will have their offices.

It is expected that the Northern Oil Company will establish works at Victoria, B.C., and will also build large wharves and a cooperage and box factory. Mr. James Auld, of Auld, Gwynn & McLarty, Vancouver, represents the company.

The preliminary surveys have been completed for the line from Cowichan lake to tidewater, which is to be built for the purpose of transporting logs from the recently acquired holdings of the American Finance & Securities Company to their mill at tidewater.

The G. M. Annable Lumber Company, which some time ago sold a 5,000 acre timber limit in the neighborhood of Trail, B.C., to Mr. Church, of Trail, is taking over the sawmill, which is located at Violin like, and will operate it in future. About 50 men are now getting out logs, and the mill will commence operation about March

A shipment of 50,000 feet of spruce lumber has been taken to Vancouver from Skidegate as a trial shipment. This lumber, which will be sent to England, is very fine, the boards being all wide and clean. It is the first shipment made from that place and will mark the beginning of the export lumber industry of the Queen Charlotte Islands.

The steamer Lonsdale, of the Canadian-Mexican line, left New Westminster on Dec. 17th with over 500,000 shingles for Mexico for shipment to New York via the Tehuantepec Railway and the United States Atlantic coast lines. This is about a record shipment of shingles from New Westminster and is the first big cargo to be shipped via Mexico.

The B. C. Gazette gives notice of the incorporation of the following companies: Gilfillan Lumber Company, Limited, capital $150,000; Canadian Cedar Lumber Company, Limited, capital $50,000; The Enterprise Timber & Trading Company, Limited, capital $10,000; Silverdale Sawmill Company, capital $100,000; the Canadian Lumber Company, Limited, capital $150,000.

Charles B. Cram and Paul B. Thompson, of Spokane, with E. F. Hill, of Sheldon, N.D., have purchased a tract of timber and fruit land along the north fork of the Salmon river, containing 7,425 acres, from George L. Merry, of Trail, B.C., the consideration being upwards of $100,000. The area is estimated to contain 80,000,000 feet of timber, 3,500 acres of fruit land, and 2,000 acres of grazing land.

F. L. Buckley and M. C. Wilcox, of Vancouver, have purchased seven square miles of timber in the Waddington Channel district, at a price said to be in the neighborhood of $50,000. These men, together with Hamilton Wilcox, banker, of Griswold, Iowa, have formed a company known as the Buckley Wilcox Lumber Company, Limited, and taken over the interests of the Clowbone Falls Lumber Company.

The Boundary Mining & Exploration Company, of Greenwood, B.C., have sold a tract of land comprising about ten acres to the owners of the Ingraham creek timber limits at a price reported to be $100 an acre. The purchasers will erect a mill immediately on the site, which is to be in operation by the coming summer. A. G. Lambert & Company, of Nelson, are said to be interested in the deal, being associated with some Ontario mill men. They hold an extensive body of excellent timber on Ingraham creek and logging operations are expected to begin at an early date.

A report has recently been published to the effect that the Brooks-Scanlon Lumber Company, of Vancouver, B.C., intended to do its logging by electricity. Someone was misinformed in the matter, as Mr. H. D. Blackford, manager of the company, in a letter to the "Canada Lumberman" says: "The report is somewhat erroneous. We would like to log by electricity, but there is no machine built for that purpose, hence we are obliged to defer logging in this manner until some electrical expert designs a donkey that will operate with an alternating current instead of by steam."

The Yale Timber & Lumber Company has been incorporated at Buffalo, N.Y., with a capital stock of $130,000. The directors are J. B. Wall, M. M. Wall, and William J. Conners. Park Commissioner M. M. Wall and his brother, J. B. Wall, who for years have been prominent in the Buffalo Hardwood Lumber Company, together with Wm. J. Conners, chairman of the State Democratic Committee, have purchased a large tract of timber in British Columbia, containing 225,000,000 feet of very choice timber, out of which they figure to get at least 45,000,000 of exceedingly fine white pine.

Considerable anxiety is felt by his friends over the mysterious disappearance of a young man named S. V. Howe, and a companion named Cunningham, who nearly three months ago left Kamloops, B.C., to look over some timber land up Clearwater river, and of whom no word has been received since Nov. 13. Young Howe is a recent graduate of Yale and the son of a millionaire lumberman of Minneapolis, and Cunningham went to Kamloops on Sept. 15th with the object of going into the Clearwater country. They purchased supplies and a couple of horses and left for up river. It is feared they have been drowned.

The Ocean Falls Company is the name of a new business started at Cousins Inlet, B.C. It is proposed to log an area comprising about 80,000 acres, which is said to cruise 40,000 feet of spruce to the acre. The location is 350 miles north of Vancouver, on a stream that has an estimated horse power of 30,000. The water at the mill site has a sheer drop of 105 feet and a drop of 150 feet in three-quarters of a mile just before striking the falls. The sawmill will have a capacity of 250,000 feet of lumber a day, figuring that 60 per cent. of the logs will be suitable for lumber and the remaining 40 per cent, will be converted into commercial pulp by means of a mill with a capacity of 150 tons. On the directorate are: Mr I. Hamilton Benn, of Price & Pierce, Limited, London; Mr. J. S. F. Lowson, paper manufacturer, of Stratford-on-Avon; Mr. William Price, M. P. for Quebec; Mr. Henry J. Crocker, of San Francisco; Mr. J. H. Campbell, manager of one of the leading banks of Vancouver, B.C.; Mr. Herebert Gilley, president of the International Logging Company, of New Westminster, B.C.; Mr. E. Walker, of Vancouver; Mr. Lester W. David and Mr. E. F. Randolph, of Seattle.

We can make prompt shipment in the following quartered
White Oak
One to two cars 12 inches and up, First and Second, nice figure and well manufactured.

How are you fixed on
Red Oak
We have about 6 cars each 6/4 and 8/4 No. 1 Common and Better and 100,000 feet 8/4 No. 2 Common and better—all dry and good lengths and widths.

Get your order in early for
Chestnut
One car 12 inches and up No. 1 and No. 2, well manufactured and dry.

There is a lot of
Yellow Poplar
at one of our outside points—
5 to 6 cars 5/8 No. 1 Common
2 to 3 cars 5/8 No. 1 and No. 2.
2 cars 5/8, 18" and over
1 car 5/8, No. 1 Common and Better
100 M feet 4/4, No. 2 Common

Here is a genuine bargain in
Poplar
200,000 feet 4/4 No. 3 Common. Can be shipped surfaced or in the rough.

If you are in the market for
Chestnut
get prices on 400 M feet each 4/4 and 6/4 Sound Wormy and No. 2 Common, 200 M feet each 6/4 and 8/4 No 2 Common and Better; we also have 2 cars Common and Better.

Another chance on Heart Rived
Cypress Shingles
300,000 each 6 x 20 and 7 x 24. Can ship immediately.

Get prices on this
Soft Yellow Tennessee Poplar
good widths and lengths. One to two cars each of 10/4, 12/4 and 16/4 No. 1 Common and Better.

What about
No. 3 Common Poplar and Bass
mixed? We have five to ten cars of 6/4 and 8/4.

If you are in the market for
Cherry
get prices on 2 cars 4/4 No. 2 Common and 1 car 4/4 Common and Better.

Ask us about our Log run
Bass
We have 4 cars each 4/4 and 8/4—mill culls out—running from 50% to 60% No. 1 Common and Better.

Our saw mills will do just as accurate and perfect work as any mills made. There are no kinks or twists in the lumber sawed by our mills, and it sells at good prices. Write for catalogue and quotations

Head Office and Works - - SEAFORTH, ONTARIO

The Gordon Hollow Blast Grate

The Heaviest, Most Durable and Most Efficient Blast Grate on the Market

Pays for Itself in One Week

"The Gordon Hollow Blast Grate saved us enough on FUEL the FIRST WEEK to PAY FOR ITSELF, BESIDES increasing the cut of our mill by ONE-HALF."—Kinsbury & Henshaw, Antigo, Wis.

Adds from 25 to 50% to the Efficiency of a Boiler

"We installed your Hollow Blast Grate System in connection with our saw mill boilers several months ago. We were VERY SHORT OF STEAM at that time, and were undertaking to burn considerable WET CYPRESS DUST from our shingle mill. After installing the Hollow Blast Grate System we HAD NO FURTHER TROUBLE with our boilers steaming. We are getting AT LEAST 20% MORE STEAM and could possibly push them to 25% MORE. We consider the Gordon Hollow Blast Grate one of the BEST INVESTMENTS we ever made."—Aycock Lumber Co., Aycock, Fla.

"The blast grates you sold me at Sylvania, O., INCREASED OUR STEAMING CAPACITY 50%, and enabled us to make plenty of steam in the winter time from FROZEN SAWDUST."—R. C. Gillett, Waverly, Va.

Gives as good results with wet, green or frozen saw-dust as a Draft Grate gives with dry wood

"We have used your Hollow Blast Grates CONTINUOUSLY since they were installed, which we believe was about FIFTEEN YEARS AGO (The actual period was 16 YRS. 8 MOS. G H. B. G. Co.) Prior to that time we were compelled to SEASON our fuel—the best of WOOD—to have a grade that would make us sufficient steam to keep our plant running, and EVEN THEN were compelled to stop at times during working hours to raise steam. After putting in your grates we make a sufficient amount of steam WITHOUT TROUBLE, using GREEN ELM DUST. The grates are apparently in AS GOOD SHAPE AS WHEN INSTALLED, and we consider them A WONDERFUL INVENTION."—G. V. Griffith & Son, Albany, Ind.

Saves Labor in Firing

"Your grates have effected a saving of about ONE-HALF in LABOR in the fire-room, and while using nothing but SAWDUST and GREEN MILL CLIPPINGS, have given us FULLY 33⅓ PER CENT. HOTTER FIRES."—The Ohio Wheel Co., Delphos, O.

Is Practically Indestructible

"I used your Hollow Blast Grates at stave mills at different points for some TWENTY YEARS, and they are JUST AS GOOD AS WHEN PUT IN, and I can burn any WET BARK AND REFUSE that otherwise COULDN'T BE USED AT ALL. They are the cheapest grate one can use, for they NEVER BURN OUT."—S. P. Shelly, Holgate, O.

The men who have made the Gordon Hollow Blast Grate what it is—our president, our secretary and treasurer, our superintendent, our foreman and our designer—have all been identified with the business since the company was organized, while our vice-president has been with us for fifteen years.

Our services are, therefore, those of experts.

Confederation Life Building, TORONTO

The Best Practice

in dressing lumber is to run a narrow surfacer at the fastest feed. This is just what the 15 and 18 inch widths of the new WOODS NO. 59 SINGLE OR DOUBLE SURFACER are designed to do at a feed of 100 feet and upwards. This machine will do double the output of a wide slow feed machine, will do it better and with half the labor cost per thousand.

The patent Round Solid Back Cutter Head gives strength, stiffness and safety, is easily balanced and practically free from distortion due to bolt strains.

The Patent Truing Devices joint the knives while running and give absolute assurance of equal cutting by all.

The Planer Specialists

Atlanta
Seattle

Not the Price, but the Service of a Tool Determines its Value

Especially is this true about Cutter Heads. They are little things compared with the size of a machine on which they are used, *but are a very important part thereof*, if your mill is to be a paying one.

The Shimer Cutter heads are built for hard service. They are made honest and true from start to finish. The billets of steel are forged under a powerful steam hammer refining the grain which is very dense and capable of standing the hardest strains. They are then bored out and turned into shape. This process gives the purchaser a Cutter head which will stand up to the work on the hardest of woods and fast feeds. Even if the belts to the Cutter Heads break while the lumber is being fed into the machine (which sometimes happens) the extra strength of the steel forged head prevents the bit seats from being forced out of line.

These tools will bear the strictest investigation. They eave the "make-ready" built into them to save time, have lumber, save annoyance, and turn out a finished product equal, if not superior, to any on the market.

SEE THAT YOU GET THE GENUINE

Look for the NAME and TRADE MARK **"The Shimer Cutter Head"** stamped on every Head we turn out. A dealer who would sell you an imitation means to deceive you—send them back and demand the genuine article with our guarantee for your protection.

BERLIN QUALITY COUNTS

No. 55 Utility Planer and Matcher

The No. 55 is designed especially for the mill that requires a machine which will run first-class flooring successfully day in and day out but which can also be set to run moulding, base, etc.

The No. 55 is built along the same general lines as our heavier matchers. It has matcher legs which are especially designed for this particular type of tool and it also has an extra heavy hold down over the bottom cylinder.

It is an excellent tool and is meeting with favor amongst our customers from whom we had considerable call for a machine of this type.

We will gladly send you full particulars of the No. 55. *Write us now* while wood working machinery is foremost in your mind.

Operating with Horses is Expensive!

Patented in Canada and U.S.A.

Dunbar Logging Engine.

Dunbar Logging Engines will haul upwards of 150,000 feet of lumber, depending on the condition of the road which only requires to be made as for horses' operations except that they should be nine feet wide.

In every case there is a large saving over the use of horses. The results to be obtained are not based on theory but have been actually obtained and in some cases the saving has been 75%.

Our descriptive circulars and photos will be gladly sent upon request. They will certainly interest every lumberman who recognizes the importance of economical log hauling.

We also manufacture Shingle Machines, Rotarys, Stock Gangs, Planers and all Saw Mill Machinery.

With your increasing business now that the dull times are over, you cannot afford to carry shavings to the furnace room in the old way. Progressive managers are just realizing the great saving effected where shavings are handled by the fan system. All the operator has to do is to open a damper in a pipe and the fan does the rest. Floors and machines are kept clean, and space formerly taken up by shavings is kept clean for stock. We would like to tell you what it would cost to install a system in your factory, mill or shop.

HESPELER, ONTARIO

The cheapest way to skid and load logs is by steam power. The

Universal Logger

is a combined two line skidder and loader with separate engine for loading with steel skidding boom and steel swinging loading boom.
It is self-propelling, spots its own cars and moves rapidly from point to point, saving time and the usual switching expense.
Ample water tank capacity is located between the trucks, and the frame is constructed to permit empty cars to pass through the machine for loading by means of its own power.
This machine is especially adapted for light steel or wooden rails.

We Make All Kinds of Machinery and Tools for the Care of Saws

The sectional view of our swage shows our new spring bracket which permits the swage to tip forward during the operation of swaging. In this bracket we have preserved our compact construction features. It is practically as strong as a solid bracket, is impossible to get out of order, and is easily adjusted to give any amount of spring desired, or to be rigid and allow no spring.

This new feature of Hanchett Swages still further increases the efficiency of a swage which without this improvement has for a number of years been quite generally conceded to have the lead over any other swage manufactured. The spring bracket, in conjunction with the action of Hanchett dies, proves unusually effective in bending the tooth forward so that it may be faced perfectly with little grinding.

Sectional View of Hanchett Band Saw Swage.
(Patented January 5, 1909.)

With this spring bracket with its perfect adjustments, added to the unusually wide range of adjustment of Hanchett swages, the filer can swage his saws to a nicety, and adjust his swage to place the points just where he wants them, and get any amount of hook wanted.

These brackets will fit all the old Hanchett Swages, so that our old customers can avail themselves of this improvement by purchasing from us the new spring bracket.

We absolutely guarantee our swages and all swage parts, and any part furnished by us which fails to be perfect in every respect, both in workmanship and material, will be promptly replaced by us without charge.

Let us send you our New 1909 Catalog No. 18. It is the most comprehensive and up-to-date Filing Room Catalog in existence. It will interest you. : : : : :

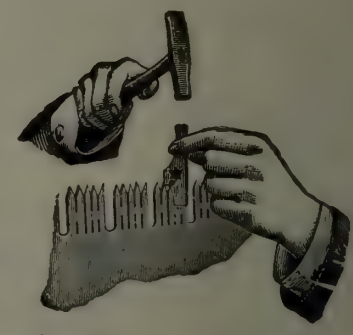
This Saw Stands Without a Rival

AND IS THE

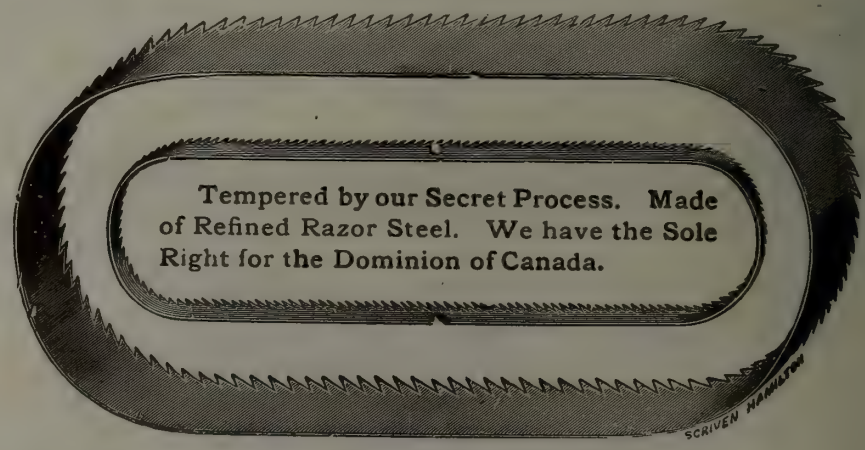


FASTEST CUTTING SAW IN THE WORLD!

Its Superiority consists in its Excellent Temper. It is made of "Razor Steel," which is the finest ever used in the manufacture of Saws. We have the sole control of this steel. It is tempered by our secret process, which process gives a keener cutting edge and a toughness to the steel which no other process can approach.

Maple Leaf Saw Set

MANUFACTURED BY



SHURLY & DIETRICH, Galt, Ont.

Directions.—Place the set on the point of tooth, as shown in the accompanying cut, and strike a very light blow with a tack hammer. If you require more set, file the tooth with more bevel.

If you follow directions you cannot make a mistake. Be sure and not strike too hard a blow, and it will set the hardest saw. **On receipt of 40 cents we will send one by mail.**

We are the only manufacturers in the world who export Saws in large quantities to the United States.

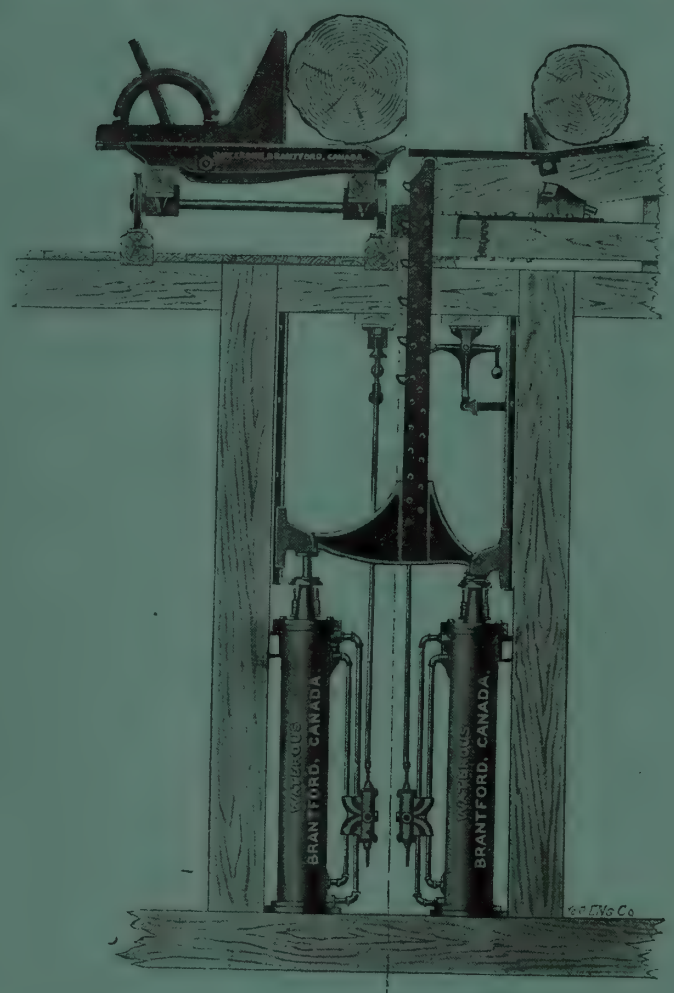
We Manufacture

HIGH GRADE BAND SAWS

Of All Widths and Lengths.

These Saws are made of Refined Razor Steel, and tempered by our Secret Process; for Fine Finish and Temper are not excelled.

Steam Actuated



Single and Double

Log Deck Machinery

Our Stationary Niggers are built single and double cylinder, in sizes to fill the requirements of any mill.

The Cylinders are provided with steam ports instead of outside pipes, thereby avoiding leaky joints and loss of steam. They are made 8 in. and 10 in. in diameter, cast especially strong where necessary.

Valve Gearing and Valves of a newer and stronger design. Steam is admitted through a check valve, which regulates the exhaust to provide a steam cushion to the piston at both ends of the cylinder. This eliminates any danger of the cylinder heads being forced out by the piston. The valves operate easily and quickly by one lever only. Valve travel is short and the same distance in each cylinder.

Guide Rods of forged steel shafting, same diameter as piston rods, are carried with one end attached to the upper cylinder head to make the machine more rigid and self contained.

Cross Heads, extra heavy, bored to fit piston rods and guide bars, and provided with patent improved oiling arrangement.

Nigger Bars of cast and wrought steel, wider and stronger than the old style bars, fitted with forged steel teeth, hinged to drop back out of the way as the bar recedes.

New Spring Cushion Floor Plate, extra heavy, constructed to take up shock of the bar on the spring cushioned end pieces. All Cylinders and Valves are **thoroughly tested** before shipment.

NOTE: The accompanying cut has been used merely to show the general arrangement of our Stationary Nigger, as the cuts for our new Nigger, described above, are still at the Engravers.

We Manufacture a Complete Line of

Niggers
Kicker
Log Stops
Log Turners
Cant Flippers
Board Lifters
Log Loaders

The Hamilton Steam Tension Band Mill

The application of steam to the band mill is being followed by the same good results that accompanied the introduction of steam operated log handling machinery and steam feeds.

Our band mill has two steam cylinders, one for operating the top wheel and one to raise and lower the upper guide. Being steam controlled, these parts ***must*** move quicker than same parts operated by any purely mechanical device, such as frictions, gears, levers, screws, etc.

This means time saved to you every day—time for you to use in sawing, or, in other words, more lumber at the same operating cost.

The mill is simply and strongly built, and any good sawyer can run it successfully.

If you will notice how the top wheel is supported, you will see that we have entirely eliminated vibration.

There are many other good features about this mill, and we think you will be interested in them. Shall we send you a catalogue?

B. C. Agents: A. R. Williams Machinery Co., Vancouver, B. C.

Planing Re-Sawing Matching Moulding

The lowest priced work in machining lumber does not necessarily mean that it is the cheapest. Lumber run too quickly through the machine, or on poor machines, or those not kept in first class order, will do more damage to the lumber than is gained in the difference in price.

We are at the junction of the Midland and Northern lines of the G T. R., and have recently built sidings to our factory which enable us to handle lumber to the best advantage.

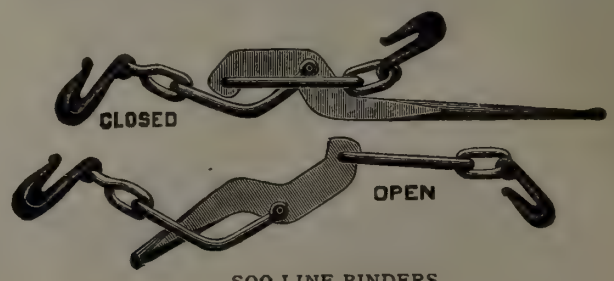
SOO LINE TOOLS SAVE YOU MONEY

SOO LINE STEEL SOCKET AND CLASP



Ever have your men kick on Peavies because the handles are not straight grained, not turned properly, too clubby, not small enough under the knob? Picks get loose and drop out? Bolts break, jaws in socket wear so hook drops too low? Hook point bend or break? Bill so light, not sufficient weight to draw in when rolling toward you? Same hook wouldn't catch in both small and large logs? Too heavy, couldn't get length wanted, etc., etc.? Well, try the Soo Line and get the best. The only line made in Canada where each tool bears a label with a guarantee. Hickory or Maple handles 4 to 6 feet.

Are you moving your cars with "main strength and ignorance" or the best car mover on earth? You can get it from us at lowest prices.

SOO LINE CAR MOVERS

Our Log or Load Binder is a time saver, and if you have been using one made of malleable iron, you'd better get ours, its all steel hand forged.

THE CANADA LUMBERMAN AND WOODWORKER is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworkking factories, pulp mills, etc., THE CANADA LUMBERMAN AND WOODWORKER is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisments.

Vol. 30 Toronto, January 15, 1910 No. 2

Antiquated Methods in Lumbering

There are some extremely contradictory views held by lumbermen in Canada as to the conditions which have prevailed of late and those which are now prevailing or to be expected. During the last six months trade conditions have improved rapidly. It took many months for the trade pendulum to return from its adverse swing, but it has come back with all the more impetus added. Yet there are cautions needed, and the purpose of the skeptic is to restrain the over-optimistic and rash Many correspondents of the "Canada Lumberman" have recently given their views on the trade situation, and almost with one accord they join in relating that they have been doing well during the last half of 1909 and expect to do still better in 1910. But in the midst of congratulations comes a communication from a manufacturer who turns out a moderate quantity of stock, and his views are worthy of attention. Probably he is a little too blue, but there is much in what he says which will bear consideration. "No lumbermen," he says, "excepting the large pine holders, have made any money (during 1909). The country is full of small mills which demoralize the market by supplying job lots of partly manufactured lumber, which the owners are usually forced to sell at much less than it cost to produce it. Nearly always they are men who consider they are producing merchantable lumber, by merely dropping slices off the log. Even this is usually done in a very defective manner, because the machinery used is too light and the power also. The operator, too, is seldom sufficiently experienced. Such conditions, coupled with the fact that such mill men are forced to part with their products, from needy considerations, for any price they can obtain, have rendered the business of the legitimate sawmiller probably the worst paid in the world."

Probably there is a modicum of unreasonable pessimism in all this, but aside altogether form the pessimism and from the statement about the sawmillers' profits, there is something to be considered seriously by everyone who owns a mill. Many mill owners are prone to imagine that with a boom of logs and a circular saw they can turn out lumber which will find a profitable market, irrespective of the quality of the logs and the efficiency of the saw. In no other line of business does one expect such unscientific methods to bring results, but somehow or other it is different with lumber manufacturing. Possibly the length of time elapsing between the cutting of the log and the selling of the lumber make it difficult, for the smaller manufacturers especially, to figure their exact costs. Yet there should be no excuse for doing business without a good knowledge of the cost of production of the article made. A fair knowledge of the costs would quickly indicate the remedy to the unsuccessful small manufacturer. He is in many cases using machinery and methods which are out of date and satisfying himself with the production of results which at one time may have been profitamle where labor and materials were cheaper, but which to-day mean ruin. If a mill is equipped with out-of-date machinery or is run on out-of-date principles, its owner should either close up or borrow some money and modernize his plant. By continuing to produce poor lumber with expensive machinery he is only postponing the evil day of failure, whereas if he closed up at once he would not involve anyone else in his trouble, and if he decided to adopt more businesslike methods he would probably make a success of his affairs and be a benefit to the community. In these days of keen competition no one has any business, let alone right, to remain for long, a drag on the business community.

Continued Improvement in Trade

The monthly statistics published by the Department of Trade and Commerce show continued increases in the Canadian lumber trade. The exports of unmanufactured wood during the month of October, 1909, were valued at $5,285,182, whereas in 1908 during the same month the value was $4,065,379. There was, therefore, an increase of about $1,200,000. Of these exports the quantity going to the United Kingdom was valued at $1,604,409, against $1,081,699 in October, 1908. To the United States the exports amounted in value to $3,282,684, against $2,687,826 in October in 1908. Acordingly, it is seen that the exports to the United Kingdom and the United States each increased by about the same amount, although to the United Kingdom the percentage of increas was much greater. This is contrary to the general belief that the exports to the United States were increasing to such an extent as to materially affect the exports to the United Kingdom. Apparently Canadian producers are able at present to supply both markets easily. The increase in exports of spruce deals to the United Kingdom amounted to about 75 per cent, yet the exports of spruce deals to the United States increased from $19,084 to $44,801, and the exports of pulpwood to the United States increased in value from $382,726 to $570,515. The exports of wood pulp to the United States were also increased by about 20 per cent.

The principal increases in the exports to the United Kingdom were as follows: Spruce deals, October 1909, $900,897, October 1908, $540,-824; deal ends, October 1909, $41,695, October 1908, $35,046; joists and scantling, October 1909, $100,220, October 1908, $27,274; white pine square timber, October 1909, $126,351, October 1908, $65,864. To the United States the principal increases in exports of unmanufactured wood were as follows: Spruce deals, October 1909, $44,801, October 1908, $19,084; planks and boards, October 1909, $1,935,977, October 1908, $1,502,288; lath, palings and pickets, October 1909, $244,525, October 1908, $19,978; joists and scantling, October 1909, $106,347, October 1908, $40,031; pulpwood, October 1909, $570,515, October 1908, $382,726

The increased duty on shingles entering the United States has probably been the cause of a decline in this line. The export of shingles to the United States during October amounted in value to $178,199, against $308,921 in October 1908.

For the seven months ending with October, 1909, the exports of unmanufactured wood amounted in value to $32,222,234, against $25,-858,549 in the corresponding period of 1908, and $31,201,779 in 1907. The exports of unmanufactured wood to the United Kingdom during the seven months were valued at $8,738,601. In 1908 the value was $6,982,526, and in 1907 $9,275,751. The trade with the United King-

dom has therefore nearly returned to the proportions of 1907. To the United States the exports for the seven months were valued at $20,573,286, against $16,765,958 in 1908, and $19,038,516 in 1907. There has therefore been a substantial increase in the exports to both countries for the seven months as compared with 1908, but the exports to the United States are increased by a larger percentage than those to the United Kingdom. For the seven months the principal increases were as follows: To the United Kingdom—spruce deals, $1,200,000; deal ends, $40,000; joists and scantling, $160,000; white pine square timber, $100,000. To the United States—pine deals, $20,000; spruce deals, $280,000; planks and boards, $2,000,000; laths, palings and pickets, $360,000; joists and scantling, $170,000; shingles, $45,000; pulpwood, $900,000.

The exports of manufactured wood during October 1909 amounted in value to $495,030, against $544,953 in October 1908, showing a decrease of some $50,000. During the seven months ending with October the exports of manufactured wood amounted in value to $3,071,810, against $2,809,327 during the corresponding period of 1908, and $2,952,292 during the corresponding period of 1907.

The imports of wood and manufactures of wood, non-dutiable, during October 1909, were valued at $565,324, and in October 1908 they were valued at $543,837. The dutiable imports of wood and manufactures of wood for the same period were valued at $277,189 in 1909 and $218,273 in 1908. There was, therefore, a moderate increase in the imports of dutiable and free. For the seven months ending with October the imports on non-dutiable wood and manufactures of wood amounted in value to $4,651,811, against $3,643,650 for the same period of 1908, and $6,873,034 for 1907. The dutiable imports of wood and manufactures of wood were valued at $1,898,722 in October 1909, against $1,422,944 in October 1908, and $2,057,362 in 1907. There has, therefore, been a moderate increase in the imports of wood and manufactures of wood during 1909 as compared with 1908, but as compared with 1907 the figures still show a considerable decline.

The conclusions most readily to be drawn from the above figures are that the Canadian lumber trade is making excellent progress toward renewed prosperity. The exports to the chief foreign markets are increasing rapidly and the trade at home is finding satisfactory markets, as indicated by the only moderate increase in imported lumber.

Government Postpones Proposed Sale of Rondeau Park Timber

As intimated in the January 1st issue of the "Canada Lumberman," there will be no unreasonable haste on the part of Hon. Frank Cochrane, Minister of Lands, Forests and Mines for Ontario, in the matter of the cutting of timber in Rondeau Park. The tenders were to have been opened and the matter settled on Jan. 3rd, but so great was the strength of local opinion, in opposition to the cutting of the trees which had been marked, that the Minister decided to satisfy himself thoroughly by a personal inspection, of the extent to which cutting, if necessary, should be carried on. Hon. Mr. Cochrane is a trained forester, and those who are interested in the preservation of the park will be relieved to learn of his decision to proceed only after a personal inspection.

A great deal of nonsense has been written upon this question, regarding the natural inclination of the forestry expert to make a study of the conditions in the park and to carry on active forestry measures there. It is said that the whole area should be left alone, neglected, so that nature may have full sway. Nature is set up as a god for worship and the results of nature are pointed to as justifying a policy of letting the park alone. There would be some reason in this if the place were to be left simply as a museum, but as the public understands the object of such a park, one of its features should be accessibility on the part of the public, and another should be the encouragement of the best conditions for the growth of the trees. It is unreasonable to claim that an ideal forestry reserve is one in which the old trees are encumbering the growth of the younger ones. This may not be the case at Rondeau, but according to the opinions of experts it is the case and there is need for some pruning. If men of the calibre of Hon. Frank Cochrane believe that cutting in Rondeau Park is not only wise but necessary, it will take a lot of argument to counterbalance their opinion. Prof. Fernow, in a recent letter, outlines the situation briefly as follows: "It is possible that under intelligent management such a park can be made more effective, more accessible, more fit for its purpose, namely, for exhibiting nature's grandeur. This may be done, not by a landscape gardener's art, which, as a rule, is formal, but by what I would call aesthetic forestry, which preserves the naturalness, and merely removes the defective and inharmonious."

Perhaps the bottom of the trouble over Rondeau Park will be found in a fear that political favor will be exerted and a friend of the Government found to have secured the right to cut the marked timber. In this regard also the situation falls back upon Hon. Mr. Cochrane, and those who know him will have no cause for alarm along this line. His having decided to proceed slowly is a cause for satisfaction on all sides. Possibly those who tendered upon the marked trees are disappointed, but in the end it is safe to say that the cutting will be done to the satisfaction of the public and that there will be no great loss to the tenderers through having been obliged to wait. Whatever the timber is worth they will probably be well content to pay, and no great expense is involved by the delay.

Factors in Canada's Growth—An English Expert's View

We are pretty well accustomed in Canada to the receipt of encomiums from people of other countries who have admired our business conditions and some of our institutions, and even though the story is an oft-told one, there is comfort to be drawn from its reiteration by one who is an authority and has studied the subject at first hand. The editor of the London "Statist," Mr. George Paish, has recently made a first hand study of the conditions prevailing in Canada, and he finds ample justification for the most pronounced optimism. His views are of interest to all Canadians. "I have visited both western and eastern Canada," he writes, "and am convinced that this country has entered upon a long period of prosperity. From time to time there will doubtless be checks to the prosperity, but these will always come to states which make rapid progress, and the reactions are necessary to prevent inflation. But there is not likely to be even a check to the expansion for several years.

"The primary factor making for progress is the possession by Canada of great undeveloped resources of natural wealth—agricultural, mineral, forestral and piscatorial. The greatest of these natural resources is the vast tract of undeveloped and virgin lands that are merely waiting for farmers to produce a supply of foodstuffs sufficient to support a great population.

"The second factor making for growth is the willingness of Great Britain to find all the capital that Canada can profitably employ, and to supply it at a low rate of interest in comparison with the rates of interest usually required from young countries. Every man of business is aware of the advantage to a country of a banker in a position to supply capital freely for development purposes and the special advantage of possessing a banker who will supply capital in practically unlimited quantities at a lower rate of interest than he charges in other countries. This is the situation to-day: British investors are supplying capital freely for permanent investment in Canada at preferential rates of interest. Hence no difficulty is likely to arise in securing the capital required.

"A third factor of great import is the ability and far-sightedness of Canada's statesmen. They recognize that the essential thing to be worked for is to open up the country and to admit population to the natural wealth. All the energies of the statesmen of the entire country, Dominion and Provincial, are at the moment directed to the extension of railways. This is the platform upon which the ministries have

been returned to office, and it is this policy they are pledged to carry out. Everything possible is being done to encourage and to stimulate railway construction both in prairie districts and between the prairies and the seacoast, east, west, and north.

"A fourth factor of great moment and weight is the world's special need of new sources of food supplies at the present time and the high prices that are now current for food of all descriptions. This condition of affairs is mainly the result of the great expenditures of capital from the South African and the Russo-Japanese wars, an expenditure which prevented for about seven years the normal rate of capital outlay for the purpose of developing the food supplies of the new countries. Inasmuch as Canada is one of the most promising fields of food production, the shortage in the world's food supplies and the high prices of foodstuffs are having, and must continue to have, a great influence in stimulating the rapid settlement of the new agricultural districts.

"A fifth factor exceptionally favorable to Canada is the extent to which the resources of the United States are developed. Canada's slow progress in the past has mainly resulted from the existence of the Great Lakes and a stretch of country of several miles in extent, consisting mainly of rock and water, which effectually cut off the farming districts of eastern Canada from those of the western States. As agricultural development proceeded west, this geographical obstacle forced the pioneer farmers of Canada into the United States. When railway extensions and railway economies made it possible and profitable to raise agricultural produce in Illinois and in the western States, the pioneer farmers of Canada sold their holdings in their own country and moved into the new districts of the United States. Further, when the Dakotas were opened up to cultivation large numbers of Canadian farmers sold their developed properties at good prices to take up virgin lands. Had topographical conditions in Canada been similar to those of the United States, these farmers would have remained in their own country and would have proceeded west as railway science advanced and it became possible to raise foodstuffs for export at an increasing distance from the seaboard. Illinois, Iowa and the Dakotas are now highly cultivated and farmers desiring land at low prices have to go still further west. In these circumstances large numbers of the old Canadian farmers who moved west from eastern Canada into the United States are returning to Canada to dwell in Manitoba, Saskatchewan and Alberta. Furthermore, considerable numbers of American farmers are also coming into western Canada. These pioneer farmers are a great acquisition to the new country. In the first place, they have skill and experience in breaking up the land, and in making it fruitful; and secondly, having sold at good prices the lands they had previously made productive, they have secured large profits and they are bringing a large amount of capital, consisting of farming machinery, cattle, furniture and cash into the new country.

"Another factor of no small moment making for rapid development is the fact that the world's unappropriated lands are fast becoming exhausted and that Canada is one of the few countries which can still make gratis grants of fertile land to anyone who will carry out the simple conditions attached to the grant.

"Lastly, the time is favorable for Canada to obtain the large numbers of workmen needed for railway construction, for extensive building operations, for distribution and for industries.

"In brief, every essential to progress is apparently at the service of Canada—natural wealth, a practically unlimited amount of capital at low rates of interest, free markets and good prices for produce, a good supply of skilled farmers and of unskilled labor, together with statesmen exerting all their influence and power to attract capital and labor and to develop the natural resources of the country.

"One of the great influences which prevented the development of Canada in the past has long ceased to operate. The long winters, the coldness and the liability to frost even during summer months, have entirely lost their terrors. Experience has shown that the large number of hours of sunshine pressed into a few months, more than make up for the shortness of the season, and that there is ample time to sow and to harvest the crops. Further, liability to damage from frost and drought is diminishing as cultivation extends. The recognition that the drawbacks to farming in western Canada have been greatly exaggerated is likely to cause the number of incoming farmers to grow steadily greater from year to year. In brief, from whatever point of view the outlook is regarded, the future of Canada appears to be assured."

Insurance Problems—A Profitable Winter Study

The matter of insurance could be profitably considered by mill owners during the winter season, when the fires are out and the plant is idle. A sawmill owner is more vitally interested in fire insurance than probably any other class of manufacturer. He owns an expensive plant, which is highly inflammable in most cases, and upon which the possible causes of fire are numerous. Not only his plant, but his stock also, is highly inflammable, and the possibility of fire wiping the whole out of existence is an ever present cause of anxiety. Mill owners know all this, but are none too prone to benefit from the lessons of the experience of others. Owners of large mills are much more careful than owners of small mills. The latter, however, are the ones who can least afford the strain of a heavy financial loss. A week or two of study upon the subject during the winter months would be advisable.

There are two broad ways of utilizing the advantages of fire insurance. Firstly, one may take out a policy at whatever rate is current upon his risk. Secondly, he may seek to improve his risk. Along the second line lies the true solution of all fire insurance problems. A careful consideration of the situation will show ways of reducing the risk on a sawmill which will induce great savings in premium costs.

Lumber owners or manufacturers are sometimes inclined to think of the destruction of someone else's lumber as a benefit to trade, because it takes just so much lumber off the market. There is no more short-sighted point of view possible. One man's loss is a direct disadvantage to the whole trade. Needless fires retard business and reduce the wealth of the country in a manner which must have a direct effect upon all industry. So widely distributed, however, is the general effect that it is neglected. Only the particular effect, when one's own property is destroyed, carries force to the average property owner. There is no more sane and imperative method of reducing business risks than by insuring against fire and taking every reasonable precaution to prevent it. Small losses are to-day receiving the attention of careful business students as they never did before, yet curiously enough the large and comparatively preventible losses are often neglected. The lumber manufacturer and the lumber owner are both large sharers in the general fire losses. Last summer the losses to lumbermen throughout Canada were widespread and extensive. Canadian lumbermen should be keen to take up any campaign to reduce the annual loss or to lessen the expense of insurance.

Apropos of the cost of insurance, is it to be hoped that no stone will be left unturned to dissuade the Dominion Government from enacting the measure now before it which places a tax of 15 per cent. on the premiums of insurance in companies not registered in Canada. Such a measure would be a calamity to lumbermen. The lumber specializing insurance companies of the United States can give much lower rates than any of the Canadian general insurance companies. No lumber specializing companies exist in Canada as yet and Canadian lumbermen should not be restrained in their right to purchase one of their prime necessities in a foreign market when it can only be had at home from a monopolistic group of insurance companies who make no specialty of lumber protection and so cannot give lumbermen the advantageous rates they deserve. Every lumberman interested should stir up his local member of Parliament on this subject.

Only by systematic and unanimous action can anything be effected in the way of persuading Parliament to go back upon a course which it has already adopted. Canadian lumbermen are so keenly concerned in this matter of securing cheap insurance that it is of vital imporatnce to act at once and with vigor. If they are to be burdened with unreasonably high premium rates for the benefit only of companies registered in Canada, which are in many cases foreign companies, they will be the less able to insure and the less likely to consider insurance as a scientific necessity in connection with their business. The passing of this measure would mean a regrettable step backward.

Reduced Stocks Reflect Improvement in Business

Manufacturers in All Parts of Canada Have Small Supplies on Hand Compared with a Year Ago—Splendid Outlook for 1910 Business

The good demand for lumber in Canada which prevailed throughout the year 1909, has resulted in the mills being now in an excellent condition to carry on a successful business during 1910. The woods operations of the winter of 1908 and 1909 were curtailed in many localities of Ontario and the eastern provinces. This, together with the excellent demand, has resulted in a materially reduced quantity of stocks on hand in the principal manufacturing districts. In Ontario, the demand for the good grades of lumber has been so steady and good that many of the mills, particularly those in the Georgian Bay district, report that their stocks are all sold. Of a total of 51 mills in the Georgian Bay district which have reported the quantity of stocks on hand at the close of 1909, twelve mills reported having on hand 71,320,000 feet of lumber which was sold, and only 17,984,000 feet which was unsold. These mills included a number of the largest ones in the district, and may be taken as fairly indicative of the actual conditions prevailing throughout the district.

The Georgian Bay District

The total quantity of stocks on hand, at the end of the year, as reported by 51 of the larger Georgian Bay mills, is as follows: pine, 249,688,988 feet; spruce, 11,148,955; hemlock, 41,161,353; hardwoods, 8,050,160; miscellaneous, 1,432,200; total, 311,481,656. The most interesting feature of the reports received is the fact that with but few exceptions the stocks on hand are of the middle and lower grades. Apparently everything in the form of good lumber has been sold, and judging from the continuance of the demand, most of that which has been sold has already gone into consumption. Manufacturers also report in many instances that the stocks they have on hand for the winter are being moved out as rapidly as possible. Another point of importance is that in many cases the mills reporting state that their output next season will be extensive. Unquestionably, the firm demand and the satisfactory condition of stocks have encouraged Georgian Bay manufacturers to look forward to a splendid year's business. When the manufacturing season opens, the prospects are that stocks will have been fairly generally depleted. With business expansion and the building increases expected as a result of the good conditions prevailing in 1909. it is not unreasonable to look for a strong and steady demand for lumber from the spring onward. Manufacturers of lumber in the Georgian Bay district are looking for it, and the more hopeful ones are counting upon having orders ahead for a great deal of their season's output.

Ottawa Valley Stocks

The stock of lumber on hand at the important manufacturing points of the Ottawa valley, including eight or ten places between Hawkesbury and Pembroke, is estimated roughly at 300 million feet. This is 100 million less than last year. Most of this stock is in the immediate vicinity of Ottawa, and it is estimated that over 200 million feet is in the hands of middlemen. A very small portion of this belongs to the class above shipping culls. Six weeks were lost in the beginning of the manufacturing season on account of high water, and there was a larger export An interesting sidelight on the latter feature is afforded by a statement of lumber shipped to the old country from the port of Montreal. Nearly all this was deal produced in the Ottawa valley. The total is 114¾ million feet, compared with 108 million in 1908. Watson & Todd, who handled, among others, the Edwards Company output of deal, sent 35½ million feet away, as compared with 28½ million the year before. E. H. Lemay, who handled the McLaughlin Brothers' cut of Arnprior, shipped 11½ million feet, or nearly double the quantity of the previous year. Robert Cox & Company, buyers of Booth's cut, dropped a little over a million feet, shipping 18¾ millions. J. Burstall & Company and W. & J. Sharples shipped 20 million feet between them, dropping half a million each from the year before. Four million of the gain at the Montreal port was made up by shipments not originating in the Ottawa valley.

The stocks of square and waney pine and hardwood wintering at Quebec are given by the Controller of Revenue as follows: square white pine, 29,455 cubic feet; waney board pine, 220,734 cubic feet; red pine, 6,262 cubic feet; oak, 698,097 cubic feet; elm, 88,663 cubic feet; ash, 607 cubic feet; birch, 141 cubic feet; hickory, 1,225 cubic feet.

Reports from Montreal and Quebec indicate that the stocks of spruce and hemlock, being wintered, are the lightest that the lumber trade has witnessed for a number of years. The excellent demand from the United States made the markets brisk, especially during the latter half of 1909, and as a result the exports were extensive. One of the largest exporting houses in Quebec report that without exception the amount of stock wintering is the lowest on record.

The stocks of lumber in western Nova Scotia at the close of 1909 were composed principally of South American order lumber, with a smaller quantity of lumber sawed for the United States market, and some laths. There was not over 5,000,000 feet of South American spruce in western Nova Scotia, perhaps that quantity of United States lumber, principally sawed into New York stock sizes, and about 3,000,000 laths. This was distributed from Digby down the shore of the Bay of Fundy to Tusket, excluding the stocks at Annapolis Royal and Bridgewater. The preparations for getting stock out for the coming season are about of an average.

In the eastern part of the province there was at the close of the year quite a quantity of stock held, principally deals for the English market and United States order stock. The parties in the woods in the east will produce about an average quantity, although the mills on the Atlantic seaboard in the eastern part of the province are not getting out more than 20 per cent. of the usual quantity.

The Nova Scotia Situation

A correspondent of the "Canada Lumberman" dealing with the situation in Nova Scotia at the close of the year, writes as follows: "Stocks of lumber on hand in eastern Nova Scotia are extremely light. In fact, the smallest perhaps in 20 years' time. Taking in all the mills to the eastward of Halifax, or between Halifax and the Strait of Canso, and including sawmills on the Intercolonial Railway tributary to Halifax, you could not get 5,000,000 feet of lumber, including refuse and every other description of lumber. In fact, I am inclined to believe that 3.000,000 feet of merchantable lumber of all descriptions would take in everything now on hand. This district usually produces about 100,000,000 feet annually.

"To the westward of Halifax there are also light stocks on hand, but they will be found heavier than in eastern Nova Scotia. This lumber goes largely to South America, where larger stocks are required to get the cargo assortments for such market.

"Eastern Nova Scotia lumber goes largely to Europe, in the shape of deals, etc., whilst from the west, South America, United States and West India cargoes are supplied. The Nova Scotia production, yearly, is about half from the east and half from the west."

A prominent New Brunswick operator in the Miramichi district, in a letter to the "Canada Lumberman," deals with the situation in that province as follows: "It is becoming a little more difficult each year to get at the stocks wintering, as parties seem to be more conservative about giving this information. As far as we can find out, there are about nine million feet of English deals wintering on the Miramichi. Most of these are owned by English concerns, who will, no doubt, move them first thing in the spring. At Campbellton and Dalhousie there are five million feet of English deals owned by an English concern and five million of South American stock, all of which we understand is already sold to go forward in the spring. At St. John there are from 25 to 26 million feet of English stock, which will probably go forward by the liners during the winter months.

"On the whole, the stock of deals in the province is smaller than it has been for a number of years. The fall was a very difficult season for woods operations. We had a great deal of wet weather. Men's wages are a great deal higher, and all the necessaries, such as beef, pork and hay and oats, are costing more than last year, which we expect will add considerably, possibly $1 per thousand, to the cost of the logs.

"We had very little snow and not much frost up to the end of December. The Miramichi river last year, and on an average for the last forty years, has been frozen over by the 3rd December. It was still open late in December this year. The lumber operations in this district are on about the same scale as last year, which will probably make about 75 million to go forward from here to the English market. This is quite a reduction, as up to a few years ago we shipped from the Miramichi from 120 to 140 millions annually."

Conditions in the West

Everyone in the lumber business in Canada knows the conditions which prevail in western Canada. Prices have recently been advanced materially on two occasions, and the British Columbia mills have been forced to call their travellers in from the prairies. Stocks are reduced to a minimum and the demand is strong enough to give every promise of a record year's business.

The increasing consumption of southern yellow pine in Canada and the northern States makes it an important factor in Canadian market conditions. The great quantity of yellow pine shipped to northern markets has recently acted as a strong drag upon any upward tendency of prices for the woods with which it competes. Canadian producers have

long been on the lookout for any improvement in the southern horizon. Conditions at present are more promising than they have been for some time. Surplus stocks of good Canadian lumber have apparently been wiped out and southern lumber looks as though in the near future it will demand a price both here and in the States which will greatly reduce its importance as a disturbing element in market conditions. Authorities who have long been bears on the yellow pine trade are now in the bull camp and predicting that buyers who delay longer in placing orders will probably be heavily penalized. The demand for railroad material is absorbing the output and will probably continue to do so for several months. Predictions are freely made of increases in prices of from $1 to $1.50, to take place before the end of January.

An estimate of the stocks of lumber on hand at Duluth, Minn., U.S.A., will prove of interest to Canadian lumbermen. The bulk of the lumber manufactured in Duluth is sold early in the season for delivery as soon as it is in shipping condition There is, therefore, very little unsold lumber on hand at the Duluth mills at the present time. A correspondent of the "Canada Lumberman" places the stocks on hand at a rough estimate at 53,000,000 feet of sold lumber and 15,500,000 of unsold lumber. The cut of the Duluth mills during 1909 was in the neighborhood of 240,000,000. In speaking of Duluth lumber, however,

Results From Advertising

A Journal's usefulness to its advertisers is measured by results. Below is an example of results from the first insertion of an advertisement in the "Canada Lumberman and Woodworker".

Hespeler, Jan. 10, 1910

The Canada Lumberman and Woodworker
Toronto, Ont.

Dear Sirs,—

Replying to yours of January 6th we are forwarding half tones of Lucas Panel Belt Sander and Cabinet Planer.

Try and run these in the next issue on the one page, as they are the best pair of finishers on earth.

It may be interesting to you to know that **we have already received seven enquiries from the West, which we can trace up to your paper.**

Yours truly
Hespeler Machinery Co., Limited
(Signed) W. G. Chater
Manager

the custom is to include the inland mills whose stocks are tributary to Duluth, the bulk of which is always handled at Duluth. The annual cut of these mills, roughly speaking, amounts to 525,000 feet, and the cut of a few tributary mills in Wisconsin amounts to 260,000,000 feet. Other small mills bring the total up to about 1,250,000,000 feet. With such an annual output, the small amount of 15,000,000 unsold at the end of the year shows that the trade conditions were most satisfactory.

The Canadian Trade and Commerce reports contain the following reference to the Swedish lumber traffic: "Large amounts of timber have this year been lying in the Swedish rivers on account of their floating having been prevented through the general strike. It is estimated that at least 3,000,000 pieces of sawing and pulp timber will not come down to the mills this year, and the consequence will, of course, be that the work at the mills will be considerably reduced this winter. The export of sawn and planed lumber also suffered very much from the strike. While during the months of January to September, 1908, there was exported 607,552 standards, the export during the same months in 1909 was only 484,595 standards.

"No material change in the wood market has taken place lately. English buyers are still very reluctant to purchase at the prices now demanded by shippers. But Australia and the Cape have come into the market to quite an extent, mixed white for Australia being quoted at £10 f.o.b."

Canadian Pine in the United Kingdom

An Englishman's Opinion Regarding the Increasing Tendency of Shipments to go to U. S. Markets

The increasing tendency of Canadian pine exports to go to the markets of the United States instead of Great Britain, is attracting much attention in the old country. Undoubtedly, Canadian shippers have recently found much more profitable markets across the border than in Great Britain, and the indications at present are that this state of affairs will be increased, in the immediate future, and will in all probability become a permanency. The English lumber trade papers have recently been devoting much attention to this matter, and in one of them, the "Timber Trades Journal," an interesting letter from a Liverpool correspondent, was recently published, which gives a brief and unbiased view of the situation. The letter was as follows:

"Sir,—Referring to your notes in your last Saturday's issue anent the value of Canadian pine, you very properly point out how the continual advances in price have affected the demand in this country.

"Whilst I hold no brief for the Quebec shippers, who are pretty well able to take care of themselvts, and who for years have played the American buyers against ourselves, I think that your remark: 'In our opinion it has reached the limit, and if any further advance is made it is an unreal value'—to be somewhat wide of the point at issue, as it ignores those economic considerations which underlie the handling of any wood, and Canadian pine in particular. Of all the pines of commerce, the one referred to stands unrivalled in its intrinsic utility for the purposes for which it is peculiarly adapted. Your remarks further overlook the growing competition in the States for this wood. At this time it is not possible to give absolute percentages, but it will probably be found at the end of the year that 85 or 90 per cent. of the product has been absorbed by the States.

"Whilst this condition of things continues, you, sir, will be the first to admit that there can be no finality of value. We hear much about 'Colonial Preference,' but it is the colonies who want the preference, and not they to give one; and, as one of the Quebec men admitted to the writer, 'so long as the States would pay $1 per thousand more than this market, not a stick would he ship here.'

"This is the plain, unvarnished position of the question, and, as your Liverpool correspondent in his report of to-day aptly remarks, 'We need hardly say that the producers in Canada hold the right end of the stick as to prices for next season's shipments.'

"Of course, it must be admitted that this trend will more and more cause the use in this country of Canadian pine to be a diminishing quantity; but, at the same time, it does not affect the point that, so long as the Canadians find this demand for their natural products, the prices must be upwards.

"There is still another factor in the position perhaps not generally recognized—that, although prices are enhanced, it does not follow that the shippers are simply pocketing the difference, as they have constantly to go further afield to secure stocks. The cost of camps is increasing, and then there is the intense competition at advanced prices to secure the right of cutting in the Governmental limits. This is at once a national asset—a lesson which we might with advantage apply to the export of one of our own natural products—coal. It is regrettable that we in this country should so far lose our grip as to commanding the supply of such natural raw products as are absolutely necessary for our industrial supremacy, yet it will serve no purpose to disguise from ourselves the fact. It behooves our capitalists to exploit the world, to find substitutes for such woods as are admittedly commandin gprices which are a bar to their use in this country."

There is no question about the main facts of the case as outlined in this English correspondent's discussion of the situation. Apart entirely from any consideration of preference, the situation is essentially one of profits. If the English markets, from the point of view of profits, were as attractive as those of the United States, there would be no reason for English importers to worry, as Canadian exporters have for many years shown a strong attachment to English trade, but can scarcely be expected to give it such a preference as to interfere with direct profits.

The Fassett Lumber Company, of Fassett, Que., started their large, two-band-saw mill, night and day on January 3rd. The company state that this is the only sawmill in Canada running night and day the year round. It has a capacity of 100,000 feet a day of ten hours. The company are stocking a large amount of logs this winter, about 30,000,000 in all. They have a large amount of hardwood, birch, elm, ash, basswood and pine. They have just finished a very successful year, and believe the demand and price for lumber will be much better than heretofore. The company operate a standard gauge railroad, which enables them to supply logs for their mill at all times. The name of the company was changed on January 1st from the "Haskell Lumber Company, Limited," to the "Fassett Lumber Company, Limited."

Montreal Lumber Market Improves

Quietness Prevails But Dealers are Optimistic—Common Lumber Looking Better

Montreal Office of the "Canada Lumberman."
January 12th, 1910.

A fairly quiet tone, in keeping with the holiday season, characterizes the lumber market in Montreal at the present time. Returns for the past year's business are in some quarters completed and show up well in comparison with the previous season's figures. The last few months of 1909 were brisk in the lumber business, for which the building operations, progressing as they did almost to the close of the year, were in a large measure responsible.

Market conditions continue to show signs of improvement, and local dealers, both wholesale and retail, are generally optimistic and cheerful. The English market has strengthened considerably and will bear close watching from now on. From the Quebec and Ottawa district the reports received are very favorable, while prices for the 1910 cut have not yet been definitely settled, there is every reason to believe that they will be closed at steady figures.

Common lumber is looking much better at present and several large lots are reported to have changed hands recently. All good grades of lumber are reported very scarce indeed.

The spruce market shows a tendency to strengthen and the different grades are in better demand. Several eastern mills have already closed contracts for their entire cuts.

All grades of pine are in good demand and there is an evident scarcity of this lumber. Dealers are expecting to see material advances in 1910 contract prices on pine.

Laths are reported quite scarce and while prices are not likely to fluctuate until the spring demand sets in, it is expected that there will be an upward movement before the new cut is placed on the market.

Hardwoods are quoted at steady figures and are not particularly active just now. Birch planks are the exception and in some quarters are moving quite freely.

The shingle market continues quiet. New Brunswicks are easier and one eastern firm is offering them 10 cents lower than former quotations. The American market apparently stocked heavily just before the last additional tariff rates were enforced. British Columbia shingles are firmer and some dealers anticipate a stronger tone to the eastern market at an early date. Existing prices are said to be too low for the profitable manufacture of shingles, and several New Brunswick companies have large holdings at the present time.

Dimension timber will rule higher during the present season. A prominent Montreal firm, who are large dealers in this class of stock, anticipate an advance of 5 per cent. over the figures of 1909.

Following are revised current wholesale lumber prices for Montreal:

1-in., 2-in. and 3-in. pine log run mill culls out	$27.00 to $35.00
1-in., 2-in. and 3-in. pine log run dead culls out	24.00 to 28.00
Pine "O" culls	13.00 to 14.00
Pine mill culls	17.00 to 19.00
Spruce flooring, sheeting, etc., No. 1	24.00 to 26.00
Spruce flooring, sheeting, etc., No. 2	19.00 to 21.00
Merchantable spruce boards	16.50 to 18.50
2-inch merchantable spruce	16.50 to 18.50
Cull spruce boards	14.00 to 15.00
2-inch spruce culls	14.00 to 15.00
1¼-inch spruce mill culls	15.00 to 16.00
Spruce scantling, 3x 3, 12 and 13 feet	16.00 to 17.50
Spruce scantling, 2x 3, 12 and 13 feet	16.00 to 17.50
Spruce scantling, 3x 4, 12 and 13 feet	16.00 to 17.50
Spruce scantling, 2x10, 12 to 16 feet	19.50 to 21.50
2-inch (scant.) x 9, fifth quality, N. Y. "outs"	16.50 to 18.00
Oak, 1sts and 2nds, quarter white	87.00 to 90.00
Chestnut, 1sts and 2nds, 1 inch	50.00 to 52.00
Birch, 1-inch log run, mill culls out	18.00 to 20.00
Maple, 1-inch log run, mill culls out	18.00 to 20.00
Basswood log run, mill culls out, 1x4 and up, winter sawn	24.00 to 26.00
Basswood log run, dead culls out, 1x4 and up, winter sawn	20.00 to 24.00
Laths, mill run, spruce, 1⅜-inch x ⅜-inch, 4 feet	3.00 to 3.25
Laths, pine, No. 1	4.00 to 4.25
Laths, pine, No. 2	3.25 to 3.50
Laths, pine, No. 3	2.75 to 3.00
Shingles, clear	2.90
Shingles, 2nd clear	2.15
Shingles, extras, 1's	1.35
Merchantable hemlock boards	14.50 to 16.50
2-inch merchantable hemlock	14.00 to 16.00
Cull hemlock boards	12.00 to 14.00
2-inch hemlock culls	12.00 to 13.50

The recent snowfalls which have been general throughout the Province of Quebec have assured the lumbermen of a good season for logging operations. The snow has been rather late in coming this year and some anxiety was felt on this account, since a poor logging season would mean a large loss to the lumber trade.

Personal and Trade Notes from Quebec Province

Mr. Wilfrid Talbot and Mr. W. Damose, Montreal, were recently in New York.

Mr. George T. Goodfellow, Montreal, is making a business trip through Ontario.

Mr. H. M. Price, of Montmorency Falls, was a recent visitor to Montreal.

Mr. P. D. Gordon, of Mason, Gordon & Company, Montreal, is at present on the Pacific coast and expects to be absent for a period of eight weeks.

Mr. H. W. Gross, Montreal representative of the Nagle Lumber Company, of St. John, N.B., is in that city for the purpose of attending the company's annual business meeting and gathering information concerning the extent of eastern stocks.

The Tourville Lumber Company, whose mills are situated at Louisville, Que., have disposed of their entire season's cut of spruce, consisting of between twelve and thirteen million feet, to a prominent Montreal firm. It is understood that this cut was purchased for export purposes.

Mr. J. A. Bothwell, who has been manager of the Quebec & St. Maurice Industrial Company for the past two years, has resigned to accept the position of general manager of the Brompton Pulp & Paper Company, at Bromptonville, Que. It is understood that Mr. Bothwell has purchased an interest in the Brompton Company and will enter upon his new work at once

Mr. Arthur H. Campbell, of the Campbell-MacLaurin Lumber Company, Limited, Montreal, was in New York recently and arranged for the opening of an office at 1 Madison avenue, to take care of their increasing business in the eastern metropolis. Mr. M. H. Gatchell, formerly with the William, Crombie Lumber Company, of New York, has been placed in charge of this office. Mr. Campbell reports a growing confidence among the New York lumbermen in the business outlook for the coming season.

Wasteful Destruction of Young Trees

The destruction of young spruce, pine and cedar trees, especially for the supply of Christmas trees, has brought out many strong protests. Mr. Gifford Pinchot, ex-chief forester of the United States, however, has given it as his view that this is not a matter of much concern. This brings forth a letter of protest from Mr. O. E. Elsemore, of Toronto, who writes to the "Canada Lumberman" in the following emphatic manner:

Editor, "Canada Lumberman":

The chief forester of the United States, Hon. Gifford Pinchot, does not seem to think the destruction of 5,000,000 young trees annually—spruce, pine and cedar—amounts to much. He says, "they can be grown on a farm of 1,600 acres." If Mr. Pinchot will be kind enough to tell us how many trees of the same size have been grown under his forestry methods within the past ten years, on any number of acres, we will use our own mathematics to show how fast we are gaining on the rapid denudation of the forests.

Mr. Pinchot seems to think the destruction of small trees at the rate of 5,000,000 annually would be small compared with the loss by fire and wasteful cutting by lumbermen. "Even if a famine was threatened," he says, "the proper remedy would not be to stop using the trees, but to adopt wise methods." If he has any of those methods up his sleeve it is high time he shook them out and held them up to the public gaze Mr. Pinchot's consistent forest policy would arrest and punish men and boys who were found cutting small trees on the 26th day of December, and encourage and applaud those found doing the same thing on the 24th day of December.

I notice that some of these scientific foresters are inclined to criticize the Ontario Government's forest policy, but the prudent observer would give the authorities credit under the existing conditions and circumstances, for doing the best they can. There is one thing that seems quite certain to me, and that is, if the small trees are not permitted to grow now, future generations will be found lamentably short of large ones.

Yours truly, O. E. Elsemore.

Ninety million dollars was the contribution of the forests to the exports of the United States during the fiscal year of 1908, an increase of twenty-fold since 1851. This is one of the striking facts told in a bulletin covering a period of sixty years, issued by the Department of Agriculture. The forest product imports have grown even more rapidly. From a little more than $1,000,000 in 1851, they reached more than $100,000,000 in 1908. Wood pulp shows the greatest increase in import. From a value of $5,000 in 1880, it has grown to more than $7,000,000 in 1907. Exports of wood pulp are comparatively small, and are decreasing.

Personal News and Views of Lumbermen

Hon. Chas. E. Oak, lumber merchant of Bangor, Me., visited Chatham, N.B., recently to look after some of his lumber interests there.

Mr. Lindsay, superintendent of the Crow's Nest Pass Lumber Company has retired, and Mr. Gilke, of Kalispell, Montana, has been appointed to the vacancy.

Wm. Margach, Crown timber agent at Kenora, Ont., is making a trip of inspection around the various lumber camps up the lake. He is accompanied by W. Smith.

A. J. Sproul, surveyor for the Shives Lumber Company at Underhill's camp, Grog Brook, N.B., recently scaled a pine tree containing 1897 superficial feet of perfectly clear lumber.

Mr. T. Patterson, of the Patterson-Tilley Company, Hamilton, Ont., has been offered and has accepted the position of Vicegerent Snark of the Concatenated Order of Hoo-Hoo for Eastern Canada.

Mr. C. O. Shepherd, of the Shepherd Lumber Company, New York City, has succeeded Mr. M. W. Teufel, managing director of the Davidson Lumber Company, Bridgewater, N S., in the New York office of the company.

Mr. John R. Pollock, of Flatlands, N.B., was married to Miss Hattie Davidson, of Jacquet River on Jan. 4. Mr. and Mrs. Pollock are spending their honeymoon in Halifax. On their return they will reside at Jacquet River, where Mr. Pollock is manager of the Louison Lumber Company.

Mr. J. A. Sayward, of Victoria, B.C., who retired from active lumber business on Jan. 1, was presented by the office staff at the mill with a beautiful silver and oak salad dish. The souvenir was artistically engraved with Mr. Sayward's initials. The presentation was an informal affair, the gift being sent to Mr. Sayward's residence.

T. A. G. Gordon, of Dryden, Ont., has returned from a visit to New York city on behalf of the Gordon Pulp & Paper Company, of Dryden, in connection with the power project of the company, which is being examined by Joseph H. Wallace & Company, consulting engineers. Samuel B. Nesbitt, president of the Gordon company, will shortly proceed to England to negotiate for finances.

Senator G. G. King, of Chipman, N.B., recently visited the Canadian West and has again returned to his home. Concerning the lumber outlook in the vicinity of Chipman, Senator King reports that at present it is not very bright. There are between two and three feet of snow in the woods now, too much for yarding, and the lumber operators are handicapped because of this condition.

Mr. E. C. Mahony, manager of the Royal City planing mill branch of the B. C. Mills, Timber & Trading Company, at Vancouver, B.C., who is severing his connection with that concern after a period of service extending over 20 years, was recently made the recipient of a handsome gold watch and illuminated address, presented by the employees of the branch. Mr. Mahony had occupied the position of local manager for the past eight years.

In accordance with resolutions adopted by the board of governors of the National Lumber Manufacturers' Association of the United States, Mr. Leonard Bronson has been engaged to fill the position of manager, and took up his duties on January 1st. The office of the manager will be located in Chicago, it being the most central point for all the different local sections of lumber manufacturers in the United States, the exact location to be announced later.

Thos. Shaw, of Shaw Bros., lumbermen of Dauphin, Man., visited Winnipeg recently on a business trip. He reports that the snowfall in his district is not so great as in and around Winnipeg, and is just sufficient for easy work in the woods. The conditions this year could scarcely have been improved upon. The operations are a little behind owing to the scarcity of labor earlier in the season, but everything is running smoothly now. The camp in the Dauphin district is up-to-date in every way this year, being, for example in one detail, lit by electricity generated from the mills.

Mr. A. Hanken, who for some time past has been superintendent of the sawmill of the Michigan Pacific Lumber Company at Jordan River, B.C., will be in charge of the Sayward mill at Victoria which his company have acquired. While the capitalists who have acquired the Sayward mill are identical with those who own the Michigan Pacific holdings at Jordan River, it is understood that both concerns will be run independently. Mr. Hanken has had over 20 years' experience in the managerial end of the business. For fifteen years he was employed as general superintendent in the firm of Gow & Campbell, in Michigan, and for five years acted in the same capacity for the Hackey & Bonnell Company, of the same place. About a year ago he went to the coast, and since then has been employed by the Michigan Pacific Lumber Company of Jordan River.

Prof Wm. Somerville, who fills the chair of Rural Economy in Oxford University, has been making a study of the forests of North America. In a recent interview he said: "I have had an opportunity of inspecting the forests on the Atlantic and Pacific coasts of Canada, and I have just returned from a week's camping in the hardwood forest of the southern Appalachian Mountains on the boundary between North Carolina and Tennessee. I find that public interest in the lumber supply of the country is at present very keen, and it strikes me that it is none too soon for the Governments of the United States and of the Dominion of Canada to be taking the question of forest conservation seriously in hand. On the Canadian side of the boundary the impression left most prominently in the mind is the appalling destruction of valuable timber that has resulted from forest fires—many of these doubtless avoidable. Canada has established a system of forest guards who will doubtless do much to control the fires, and she is also taking steps in the direction of national forest reserves."

Mr. M. L. Foley, who for many years was connected with the E. B. Eddy Manufacturing Company, Hull, Que., visited Ottawa recently, after an absence in the West of twenty years. Mr. Foley, who is an expert for the E. & N. Railway, as well as some London and New York Log Scale, and is an expert on both standing and sawn timber. He is interested in several timber holdings in British Columbia, having located many sawmill sites in the province for outside capital, and is acting as expert for the E. & N. Railway, as wel las some London and New York capitalists. Speaking of the West, Mr. Foley says that British Columbia, the province of his adoption, is going ahead at a more rapid rate than any of the provinces in proportion to her population. The extension of the E. & N. Railway from Wellington to the west coast of Vancouver Island opens up a splendid field of virgin soil, which is easily cleared, and most suitable for root and market gardening. This land can be secured all the way from $5 to $40 per acre, according to the amount of timber standing on the soil. With the completion of the road about the end of next year it is expected there will be quite an influx of small farmers settling all along the line.

One of the officials appointed by the New Brunswick Government to look into forest conditions has reported on the phenomenal growth of spruce in that province. He declares that he has travelled over much of the timber areas of Canada and has never seen anything approaching the phenomenal growth of spruce to be found in New Brunswick and parts of Nova Scotia. In Ontario an abandoned field produces weeds; in New Brunswick and Nova Scotia, spruce. In the counties of Kings and Albert, farms abandoned ten years ago are to-day covered with a thrifty growth of spruce, and farms abandoned thirty years ago are to-day carrying a heavy stand of spruce from 30 to 40 feet in height and from six to ten inches in diameter breast high. With nature thus asserting itself, it becomes only necessary for the Crown to repossess these deserted farms and allow them to grow up with spruce. They never should have been allowed to pass out of the hands of the Crown. Action should be taken at once to see that they revert to where they belong. If this is done and anything like proper fire protection afforded, these deserted homesteads will in a few years become valuable timber bearing lands and will add considerably to the public domain.

E. Mallandaine, chief timber ranger and district land agent in the Kootenays for the Canadian Pacific Railway, has been granted a two months' leave of absence by the railway company to enable him to take a well earned holiday. It has been several years since Mr. Mallandaine has had a vacation, and the work he has accomplished has begun to tell on his health. In addition to his office of district land agent and chief timber ranger for the Canadian Pacific, Mr. Malladaine has filled the office of chief fire warden for the Canadian Pacific and has had the personal supervision of many fire wardens throughout the Kootenays. As a result of Mr. Mallandaine's explorations the company will know just what they have in the way of timber, agricultural lands and other lands. Hundreds of miles of new trail have been cut that will not only be a benefit to the company, but to the Government and the prospector and others making their living out of the hills. All the streams in this vast area have been measured and their courses correctly plotted, and the altitude of high mountains was also taken. The railway company also have in view the clearing up of large areas of land for settlers and leaving it in such a state that when the land is taken up a crop can be produced immediately without the necessity of stumping and laboriously clearing the land, as at present.

Sturgeon Falls, Ont., reports considerable improvement in the lumber trade. Prior to the last two months the effect of the slump of 1908 was still visible, but during the last two months prospects have brightened and prices are $1.50 to $5 better than last year, while in some lines of stock there is quite a scarcity.

Preventing Breaks in Band Resaws

Some Practical Pointers on Avoiding Accidents —Lessons from Experience—By J. W. Irwin

I have been handling band resaws for one firm about four years with the machine running constantly ten months in the year, and during this four years I have had only three cracks in the saws, two from accidents, one being in the centre of the braze. The first two were caused by the saw jumping off the wheels; by a sliver jamming and making it very hot on the tooth edge and the lower wheel rubbing hard against the back of the saw, case-hardening it. The cracks commenced at these spots, and the one at the braze I can hardly account for unless the tension had got wrong, as it commenced at the middle of the braze at the centre of the blade.

Previous to my coming to this firm they were quite discouraged with their resaws cracking and breaking and could scarcely get anything done. Well you might ask, how do you manage to keep your saws from cracking, as so many band saw filers have all kinds of trouble with their saws cracking and breaking and heating.

First: I keep the saws well swaged and shaped with the shaper, and ground with the automatic saw sharpener. Never file resaws with files, as the least cut with the corner of the file in the blade of the saw will start a crack.

Second: I keep the saw properly tensioned up to the curved gauge with a hammer or rule, properly levelled, and on the back of the saw I carry about 1-32 of an inch on a five-foot straightedge. Then, the saw being in a good condition, I put it on the machine, tighten the saw and take a short true straightedge or square (I use the latter myself and find it the best), open up the rules, place the straightedge against the two stationary rules, then draw in the rules till the straightedge comes quite close to the saw. Then I look closely and see if the straightedge shows straight in line with the saw at the bottom of the rules and at the

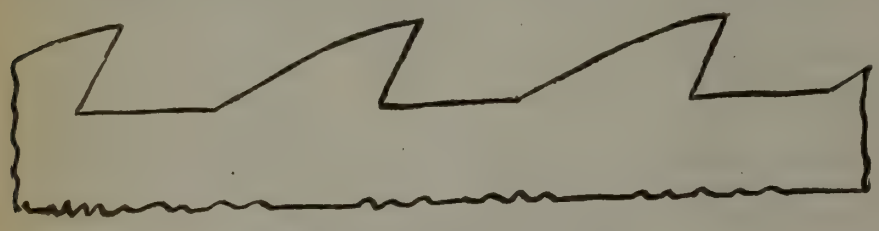

Diagram of a Good Resaw Tooth.

top also. If they are out the least bit it is very hard on the saw and the result will be snaky work and this will cause the saw to become hot.

"Well," you say, "is that all there is to it? I do all that, yet they crack and break."

Third: The last and most important of all, in by estimation, is the proper shape to carry the tooth in a resaw. Many band saw filers will admit this to be a very important part in a band saw. I include a drawing to illustrate this. The tooth for a four or five-inch saw is to be 7-16 of an inch long. The straight space in the throat is to be $\frac{7}{8}$ of an inch long with a little curve on the back of the tooth. The teeth are $1\frac{3}{4}$ of an inch apart. Now this style of tooth is very important if you wish to prevent the saws from cracking and breaking. I introduced them in this factory upon the suggestion of a band-saw man from Quebec who was once a filer and is now superintendent of a large manufacturing concern. He explained to me the reason why they were a success and as I saw through the idea at once, I set to work to put my saw teeth in this style. I find that it worked out very satisfactorily.

The following Canadian patents, of interest to lumbermen, have been issued by the Canadian Patent Office. Information regarding them may be obtained from Russel S. Smart, care of Fetherstonhaugh & Company, 5 Elgin street, Ottawa:

122,341—B. D. Stevens, Beloit, Wis.; holding devices for planer head bits; Berlin Machine Works, Limited.

122,473—E. Smith, Black River, N.B.; sawmills.

Some useful and entertaining philosophy is indulged in by the Berlin Machine Works, Limited, in their monthly bulletin "Berlin Quality," for January. The editor contributes an interesting discourse upon New Year's resolutions. The other pages are made attractive by illustrations and descriptions of a number of the company's excellent wood working machines.

Frand A. Cutting, 79 Summer street, Boston, Mass., has presented his friends again with a fine large calendar, on which the numbers are displayed in large sized type. At the head of the calendar is an illustration of a carload of hemlock bark, which is his business specialty.

Miscellaneous News of Interest to Lumbermen

The annual convention of the Canadian Forestry Association is to be held at Fredericton, N.B., on Feb. 23rd and 24th.

The annual meeting of the Mountain Lumbermen's Association was held at Cranbrook, B.C., on Friday and Saturday, Jan. 14 and 15. A special feature of the gathering was a ball in the Auditorium on Friday night. The committee of arrangements consisted of Chairman A. Leitch and Messrs. Lund, Ross, Adolph, McNab, Watts, Dubois, Staples and Dr. J. H. King.

The Northumberland Pulp & Paper Company, Campbellford, Ont., will install a log conveyor in connection with their plant. The conveyor will carry the rossed wood to the storage yard, and from thence when needed to the mill. It will be supported on trestles 30 feet high and will be 360 feet long from centre to centre. Like all the other machinery at the mill, the conveyor will have direct electrical drive.

A bill has been introduced in the House of Commons by Mr. Armstrong, M.P., making it illegal for any member of the Commission for the Conservation of Natural Resources, or any secretary, officer or clerk, employed by the commission, to purchase or acquire franchises, powers, mines, lands or timber limits under penalty of forfeiture of the property so acquired and payment of a penalty of $1,000 for each violation.

The E. B. Eddy Company, Hull, Que., now enforce a compulsory examination of their girls' teeth. Every female worker in the match factory has to undergo once a week a specialist's examination. Every defect is reported on a slip which is handed to the patient, and the latter is obliged to have it remedied as quickly as possible. This is in accordance with the provisions of the law of the Province of Quebec, and the object aimed at is the prevention of necrosis of the jaw, a malady superinduced by the action of phosphorus fumes or vapor.

Favors an Export Duty on Pulp

Mr. Thomas Malcolm, of St. John, N.B., in a recent interview gave his views upon the question of imposing an export duty upon pulp, and the situation developing out of the construction of the International Railway. "The International Railway," he said, "is not being built for the benefit of foreigners, and the sooner an export duty is placed on pulpwood the better I will be pleased. The road is being built to develop the country through which it runs, and I would much rather see the lumber used by local industries than carried to the United States as raw material. I believe most strongly in the development of industries in our own country and such development would be of greater value to the International than anything else. Instead of the shipment of lumber to the United States being the chief business of the road, we are doing no such business now, and we are getting more traffic than we can handle comfortably. The chief business now is in connection with the lumbering business, carrying men and supplies. There are 3,000 men in the woods this winter, and operations are being carried on on a large scale. The presence of the railway is a great convenience to the lumbermen in getting in their supplies. Formerly they had to get their supplies in a year in advance, as they had all to be hauled, and this was only possible when the snow was on the ground."

Georgian Bay Prospects are Bright

R. A. Loveland, of Saginaw, Mich., who is identified with extensive lumbering interests in Ontario, referring to conditions in the Georgian Bay district, reports that prospects are unusually favorable. The season thus far has been satisfactory as regards operations in the woods, although at the outset men were somewhat unsettled, but they are now doing good work and there is every reason to expect every sawmill in the district will have a full stock of logs to begin the season with in the spring. Loveland & Stone, at Cutler, will manufacture 30,000,000 feet, and the Saginaw Lumber & Salt Company, at Thessalon, 20,000,000 feet next season. There is very little good manufactured pine on the mill docks remaining unsold at the present time in that district.

Not only have large blocks been sold, but contracts for sawing millions of feet for delivery during the season have been made by sawmill men with dealers in the Saginaw valley, Chicago, Detroit, Cleveland, Tonawanda and other eastern points. Good pine lumber is high and there is reason to expect that the better grades will bring still higher prices next season, for the reason that wages and supplies are considerably higher than usual. Lumbermen state frankly that, aside from the stumpage cost, the expense of getting pine logs to the mills is not less than $12 and $13 a thousand feet. When sawing, loading, freights, etc., are added, it is seen that if the manufacturer gets any reward for his industry prices must be stiff. Then, too, only a comparatively small portion of the timber will cut lumber of the better grades. Some Saginaw valley lumbermen operating there state that they are leaving the low grade timber in the woods, as they can not put it into lumber and come out whole on the deal.

John McLean, of the Port Moody Shingle Company, paid a visit to his old home in Caribou, Me., recently. On his way to the east, he stopped in Toronto and called on a number of his friends among the trade.

The Retail Dealer and His Problems

An Enterprising Dealer—Leaks in the Lumber Business

A Retailer of Wide Experience

Wm. A. Hagerman, London, Ont,

One of the best known wholesale and retail lumber dealers in western Ontario, is Mr. Wm. A. Hagerman, of London, Ont., who belongs to a family which has been identified with Ontario from its pioneer days.

The subject of this sketch was born at Hagerman's Corners, Ont., in the township of Markham, in the year 1852. He comes of U. E. Loyalist stock, his grandparents having been U. E. Loyalists. The place of his birth was deeded from the Crown, to his great grandfather, about the year 1790, and the two hundred acres then acquired is still held in the Hagerman name by -two uncles.

At the age of eleven William Hagerman removed with his parents to the township of McGillvray, where his father had taken up some bush land, from the Canada Company. It was there he saw the giant white oaks felled, hewn into square timber, and hauled to the the railroad to be shipped to Quebec, and as it would require four or five good teams of horses or oxen to handle some of these large sticks, one will gather a very good idea of their size. It was there also that his young mind was inspired to be a lumberman, if he grew to be a man. Hemlock timber was in abundance, as well as oak, beech, birch, maple and cherry, and was of very little value in those days. It was burned in the log heap to clear the land.

Young Hagerman's chances for schooling were not of the best. He had three miles to walk to reach the old log school, and this would be for about four of the winter months. In the spring, summer and autumn months he was kept at home, helping to clear the new land, and to gather in the harvest, which was hard work in those days before the advent of modern machinery, as everything was done by hand.

At the age of eighteen he started out to face the world, spending the first winter in a lumber camp, owned and operated by the late Dr. Hunter, in the township of Whitechurch. The following spring he returned to his former home, and helped his brother to clear the land. The winter season was spent in the lumber woods.

In April, 1883, he removed with his wife to Michigan, and worked in a sawmill, owned and operated by the late William Peter, but as he preferred Canada to a foreign country, in September, 1883, he returned, settling in London, Ont., securing a position with the Bennett Furnishing Company, as yard foreman and lumber inspector, and remaining with them about four years.

In order to better his condition, and become better posted in the lumber business, Mr. Hagerman engaged with Mr. F. G. Rumball, travelling for him for one year. In 1888 he started in business for himself, in the wholesaling of hard wood lumber, buying and selling in car lots only. He gave his business his whole attention, and soon gained a good connection. In 1899 he purchased some property on Queen's avenue and opened a retail yard, handling hardwood, as well as pine and hemlock lumber, and worked up a good business. Since then Mr. Hagerman has built upon his properties formerly used for his lumber yard

---

How to Prevent the Leaks

Success in manufacturing depends as much on watching for detail technicalities as upon a basic knowledge of business conditions. Both are essential. And these little points, which must be watched, spell success or failure in any line of manufacture. The head of a manufacturing business must discover and catalogue the weak spots where profits are likely to leak away.

Raw material buying offers the first big loophole for leaks. You must have more than a knowledge of lumber—or of steel or textiles or coal—whatever you buy. Some managers give to the lumberman a profit which rightly belongs to the mills, because they buy only in small quantities for immediate demand.

Labor must be carefully supervised. Wages cover many leaks. Piece work time records are valuable, but on many orders, except the large ones, are costly and often misleading in mill work. It is economy to hold good men. Poor workmen are responsible for rejected work.

Ordering work into the shop carelessly is responsible for heavy manufacturing costs in many lines. Arrange work so that each department is busy and not waiting for jobs to come through. In the effort to work to capacity, however, don't figure too low on jobs.

There is a balance to be struck between the cost of idle departments and the cost of making and selling the goods. Departments can often be kept busy by arranging stock work to fill in the gaps.

Manufacturing details naturally must be followed closely. Bad cutting—too much kindling wood—is uneconomical. But too much labor can be expended in sawing small pieces. Here is another chance to balance the cost of two methods of procedure. Some of this cutting loss is due to errors in billing work into the shop. Unskilled men, as a consequence, waste time in figuring details.

Lack of cost knowledge is a basic cause of an unsatisfactory inventory. Don't figure a job without having sufficient details. Guesses at values, without knowing the exact amount of labor required, cause many losses. Few men, also, have a proper knowledge of their general expense. This results in many a profitless job. The lump quotation, too, causes heavy losses. All quotations should be made on a basis of all millwork required.—C. J. True, in "Factory."

A Well Equipped Lumber Firm

The most important matter for a retail yard owner to consider is the securing of good stocks. Energetic methods and good stocks will ensure success anywhere. A properly equipped lumber yard and planing mill finds it necessary to supply itself with various kinds of lumber that are produced in the States, and should be glad to know of dependable concerns who handle such products, and upon the reliability of whose shipments they may depend.

Among the shippers who are catering to such trade, the firm of Wistar, Underhill & Company, Philadelphia, Pa., stand high, and in the past three or four years have made many good friends among Canadian buyers. This firm make a specialty of such hardwoods as poplar, quartered oak, plain oak, chestnut and gum. They also handle extensively the output of first class mills manufacturing cypress, longleaf and shortleaf finish, flooring and ceiling, as well as longleaf yellow pine timbers. They have their own lumber yards, in which they carry well rounded stocks at Nashville, Tenn; Crandull, Tenn.; Dugdale, Va.; Warrior, N.C., and Evergreen, N.C.

Frederick S. Underhill, of this firm, is a native Canadian, claiming Montreal as the place of his birth, in which town he spent his early years. He is personally known to many Canadian lumbermen and has been actively identified with the National Wholesale Lumber Dealers' Association, of which organization he is a trustee. He has also been honored by serving for several terms in the office of the 2nd vice-president of the National Hardwood Lumber Association. Mr. R. Wyatt Wistar and Mr. Thomas N. Nixon, of this firm, are lumbermen with many years of practical training and experience.

Mr. James W. Anderson, one of the principal sales representatives of the firm, was brought up and educated in London, Ont. He is well known to many lumbermen and millmen and visits his Canadian friends three or four times each year.

Mr. W. J. Anderson, the resident Canadian representative of the firm, has lived in London, Ont., for the past 25 years. He has represented Wistar, Underhill & Company in Canada for about three years and has made many friends for himself and his firm. Mr. Anderson has paid several visits to the mills. These visits enable him to understand fully the various stocks that he has to offer.

By a judicious system of disposing of its timber lands the Province of British Columbia has gradually built up an enormous annual revenue. As the demand for timber lands increased the number of licenses to cut timber grew correspondingly; the stumpage increased, and in every part of the revenue from timber the amount turned into the Government treasury jumped. In 1908 the revenue of the province timber department from all sources totalled $2,658,381.39. This enormous sum partment from all sources totalled $2,658,381. While it is not expected that there will be any great increase in this amount during 1909, for the reason that no new timber licenses are being issued, it is safe to say that the figures of 1908 will be equalled if not surpassed. The revenue from each timber license is an annual one until the timber is cut—the rate being $140 per square mile on the coast and $115 in the interior of the province, besides which the Government collects 50 cents for every thousand feet of timber sawed. Thus the Government is assured of an enormous annual revenue with practically little expense at collecting.—The Mississippi Valley Lumberman.

THE MACHINERY WORLD

What Manufacturers of Logging, Sawmill and Woodworking Equipment are Doing

A Novel Improvement in Logging Machinery

The development of the steam skidder and loader during the past five years indicates that, like the automobile, it has came to stay; and that the operator who keeps his eye on the cost sheet cannot afford to continue the use of old methods. Any engine of sufficient power will skid a log and load it. How many it will load in a day, however, depends on many things outside of the engine itself.

The Russel Wheel & Foundry Company, of Detroit, Mich., have recently brought out a combined skidding and loading machine, built

Combined Skidding and Loading Machine—The Russel Wheel & Foundry Company, Detroit.

for the Ingram-Day Lumber Company, Lyman, Mich., which has a number of novel features, all of which, they assert, have proved to be distinct improvements. The machine, excepting the loading boom, is constructed entirely of steel. It is what is known as the straddling type — that is, it straddles the track, resting on blocking and is raised and lowered by means of power-operated hydraulic jacks of ample capacity, to ensure rapid action.

The skidding is done by means of a Russel special heavy duty logging engine, cylinders 9-inch x 11-inch, 150 pounds working pressure

Combined Skidding and Loading Machine—The Russel Wheel & Foundry Company, Detroit.

There are three skidding drums, 30-inch diameter, 30-inch face, two of which only are in constant use, the third being only used in case of a broken line to avoid delay while splicing. This engine is also equipped with two drums for tightening the guy lines—and drum for a car spotting line.

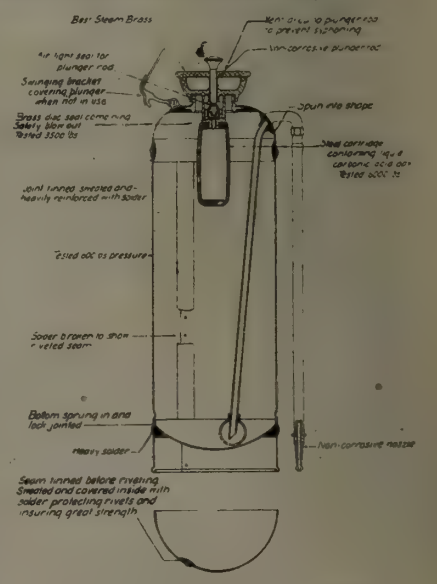
On the front end of the machine is a skeleton steel tower from which is suspended a vertically hinged jib, or triangle, from which the skidding sheaves are hung at the outer end, on each side of the jib, just over the skidding sheaves, is a guy line sheave. The two guy lines are made fast, one on each side of the machine, to any convenient stump or tree entirely without regard to their relation to each other, the lead of the lines may be backward approximately to an angle of 45 degrees from the centre line of the machine.

The guy lines lead through the sheaves on the end of the hinged jib, through sheaves on the tower to two friction driven power operated drums on the skidding engine. The connection of the hinged jib at its upper end to the tower is not rigid, being provided with a spring arrangement similar to the draft rigging on a car. The company claim that by this arrangement the following advantages are secured: first, there can be no interference between the skidding lines and the guy lines; second, the guy lines cannot possibly interfere with the loading boom; third, all strains due to skidding are absorbed by the guy lines; fourth, all shocks are softened by the spring attachment of the jib; fifth, an operator standing on the deck of the machine watching the hinged jib can bring it into an exactly central position with an equal strain on each guy line; sixth, should one guy line stretch they can be equalized without any delay to the skidding or loading; seventh, should a guy line break the jib will swing into the line of pull of the skidding line, relieving the tension on it, and allowing the leverman time to release his friction before any strain is transmitted to the tower of the machine.

The loading boom is of the swinging type, having a hinged connection at its lower end to a turntable on which the loading engine is mounted and its outer end supported from the top of the tower.

The loading engine has two 8 x 10 cylinders for 150 pounds working pressure, and three drums, one operating the loading line and the other two for swinging the boom, by means of two wire ropes leading through sheaves, supported on a steel frame projecting from the front of the tower.

The swinging of the boom is controlled by one lever and the company claim that the action is quick and certain—the boom being locked in any position by placing the operating lever in a middle position. When the machine is being moved the loading boom is locked in a central position by a foot brake.



As the capacity of a skidding and loading machine must largely depend on the proportion of working hours it can be kept at work skidding and loading, the designers of this machine had in mind the production of a machine with which a maximum amount of time would be consumed in work that would count for results and a minimum consumed by time lost in moving or in delays caused by the interference of guy lines and between skidding lines and loading boom.

The accompanying illustrations clearly show how this has been accomplished, and advices from purchasers of the machine express the highest satisfaction with its operation, design and construction.

A Fire Extinguisher which will not Freeze up.

The illustration published herewith is of a hand fire extinguisher which should find much favor among samwill owners. The chief objection to hand fire extinguishers of the ordinary type has been that the contents freeze at slightly below the freezing point of water, which renders them not only useless but oftentimes damaged beyond repair.

The Arctic, being charged with calcium chloride dissolved in water, will not freeze in a temperature as low as 30 to 40 below zero. This solution is also more efficient than water as a fire extinguisher. The expelling force consists of three ounces of liquid carbonic acid gas contained in a steel bottle which has been tested to a pressure of 6,000 pounds.

Arctic Non-Freezing Fire Extinguisher.

The operation is simply to press with the hand a steel plunger. This plunger has a fine point which pierces the seal of the steel bottle and liberates the gases, generating sufficient pressure to send a stream of water at least 50 feet. The mechanism is very simple, there being no valve springs or levers to get out of order.

This extinguisher will appeal as an ideal equipment for exposed

places where it is impossible to keep the buildings heated at all times, or where there is no heat, and for this reason will be especially suitable for sawmills

Further particulars may be obtained from Messrs. Archer & Gerow, 8 Temperance street, Toronto, who are putting this extinguisher on the market.

Prominent Lumbermen Called by Death

Henry Hilliard, one of the best known business men of St. John, N.B., who was extensively interested in lumbering, died at his home on Dec. 22nd from complications following a severe cold. Mr. Hilyard was a son of the late Thomas Hilyard, who, in his day, was one of St. John's most prominent shipbuilders and laid the foundation of the Hilyard firm, which became one of the largest and best known in eastern Canada. Mr. Hilyard was born in 1847 and was consequently sixty-two years of age at the time of his death. He received his early education at the St. John schools and supplemented this with a professional course at Harvard University Law School, graduating with the degree of B.C.L. in 1870. Returning to St. John, he continued to prosecute his legal studies in the office of Byard & Thompson—then a well known legal firm at that place. He was admitted an attorney and afterwards went to England. On his return from England he associated himself in business with his father, and upon that gentleman's death succeeded to the business with his brother, Thomas Hilyard, conducting the firm as Hilyard Brothers. This firm engaged first in shipbuilding, and a number of wooden ships, famous in their day, were built by them. Of late years they have devoted their attention to the lumber manufacturing business and sawmill operations.

Mr. Hilyard is survived by his wife, one son, four brothers and two sisters. The brothers are Thomas, who was associated with him in buiness, Arthur and Herbert Hilyard, of the Dalhousie Lumber Company, and William Hilyard, of Florida.

Mr. Hilyard left an estate valued at $77,000. His share and interest in the firm of Hilyard Brothers is to go at once to the son, so that he may succeed his father as partner.

Mr. James L. Burton, one of the best known lumbermen of Ontario, died on January 4th at his home in Barrie. Mr. Burton was formerly in partnership with his brother, Mr. Martin Burton, of Barrie, but severed this connection a few years ago when a company was formed which included Mr. J. L. Burton and his son, Major Frank Burton. Mr. Burton, who was 62 years of age, was born at Millbrook, county of Durham, in 1848. He located in Barrie when he was 20 years of age and engaged in the lumber business. In addition to his extensive lumber interests, Mr. Burton was a large shareholder in the new Parry Sound Chemical Works. Mr. Burton also took a lively interest in municipal affairs and served the town of Barrie as deputy reeve for several years. In 1889 and 1890 he occupied the position of reeve. Mr. Burton had been more or less of an invalid for about twelve years, since sustaining a fracture of one of his legs, which never united. Several weeks previous to his death his illness became critical and the end was not unexpected. He leaves a widow and one son.

Oliver Harper foreman of the milling department in T. A. Burrows' sawmill, near Grand View, Man., was accidentally killed recently. Mr. Harper was a promising young man, well known in the Dauphin district. He came originally from Pennsylvania, and entered the employ of Mr. Burrows three years ago, remaining with him ever since and working himself up from the duties of an ordinary workingman to those of bandsaw filer and foreman. He had a reputation for honesty and reliability which made him many friends. He is survived by a widow and four children.

F. C. Whitehouse died at Topsham, Maine, recently. Mr. Whitehouse was head of the Bay Shore Lumber Company, an American concern, which a few years ago invested a quarter of a million dollars in lumber property in St. John county, erected a mill, constructed barges, and has been making large annual shipments of pulpwood to mills in Maine.

Mr. J. E. Clement, Provincial Crown Timber Agent, died on Jan. 6 at Montreal, Que., at the age of 79 years. Mr. Clement had been ill for several weeks. He was a native of St. Hyacinthe, and went into business at an early age. For several years he was a leading merchant of St. Johns, Que. Ten years ago he was appointed Crown timber agent. Mr. Clement leaves nine children, three sons and six daughters.

George Mann, inspector for the Bradley Lumber Company, of Hamilton, Ont., was instantly killed by a M.C.R. express, one mile east of Hagersville, Ont., on Jan. 5. He had been to the bush to inspect lumber and was walking back on the track.

Mr. John H. Whitten, a well known and wealthy will owner of Manchester, and formerly of New Brunswick, died suddenly at Manchester on Jan. 5.

The Pioneer Lumber & Implement Company, of Moose Jaw, Sask., have disposed of their business to Mr. Frank J. Grobb, a member and partner of the firm. Mr. Grobb intends to carry on the business as heretofore.

Lumber Matters in the Law Courts

Suit Between Game Club and Loggers—Interesting Freight Rate Case in the United States Courts

Inteference with Game Club—The appeal taken by the Riviere Ouelle Pulp Company against the judgment rendered by Judge Cimon in favor of the Ste. Anne Fish & Game Club, was recently maintained in the Court of Appeal and the decision of the lower court reversed. This was a case arising out of the damming of a lake by the appellant company, for the purposes of driving logs. The Fish & Game Club contended that the erection of this dam backed up the waters of the lake to high level, and interfered with fishing on the lake and hunting of deer. They accordingly entered action in the Superior Court against the Riviere Ouelle Pulp Company and their contention was maintained by Mr. Justice Cimon.

Suit to Compel Payment—William J. McDonald, Hamilton, Ont., has issued a high court writ against Hugh S. Brennen, of Hamilton, to compel him to pay to the Bank of Hamilton $7,500 under an agreement between the plaintiff and the defendant by which Mr. McDonald sold and transferred to H. S. Brennen 120 shares of stock in the Mississauga Lumber Company, Limited, in consideration of Mr. Brennen agreeing to pay the indebtedness of Mr. McDonald to the Bank of Hamilton of over $10,000. The agreement was in writing and was dated Dec. 31, 1906. Since that time it is alleged that Mr. Brennen has not paid any of the money to the bank, and the bank officers are pressing Mr. McDonald for a settlement. He, in turn, is proceeding against Mr. Brennen.

Injury to Logging Employee—A verdict for the defendant has been rendered in the case of Elmer Hunter against the Anderson Logging Company, which was heard before Mr. Justice Morrison and a special jury of eight at Vancouver recently. The plaintiff lost an eye as the result of an accident while working for the Anderson Logging Company at its camp on Vancouver Island. Hunter was holding up a piece of wire which was being cut on the edge of an axe by another man using a hammer. As the hammer came down a chip of steel broke off and struck Hunter in the eye, which had subsesuently to be removed. Hunter sued for unstated damages under common law and the Employer's Liability Act, but the jury found that the employer was not liable. He may still seek damages under the Workmen's Compensation Act.

Payment of Camp Employee—A shantyman named Isaac Moher, of Peterboro, sued Wm. Creswell, a lumberman of the same place, for balance of $16.66 alleged to be due him for work done in camp. He alleged that he had been engaged at $26 to $28 per month. Defendant claimed that the agreement was for $20 to $26 per month, the exact amount to be settled when the man had shown his capacity. Moher had proven to be a slow workman and had left the camp on the Thursday before Christmas. When an employee did not stay for the whole season it was customary to deduct the cost of his transportation. The magistrate decided the case against the plaintiff.

Unreasonable Freight Rates—A common carrier in the United States charged with exacting an unreasonable rate cannot escape liability on the ground that the shipments could have been transported over a route carrying a lower rate. The Interstate Commerce Commission has ordered reparation of unreasonable charges upon eighteen carloads of newspaper shipped from Grand'mere, Que., to San Francisco, in the case of H. R. Williar v. the Canadian Northern Quebec Railroad Company. The commission holds that if the rate assessed was in fact unreasonable, the defendants should be required to make reparation, irrespective of the fact that the shipper would have enjoyed a lower rate if his shipments had moved over a different route.

Refusal to Accept Delivery—Messrs. Wood Brothers, lumber dealers and millers, Brantford, Ont., have been awarded $2,777.59, less $200, on a counterclaim against the Gall Lumber Company, Limited, of Toronto, by Mr. Justice Latchford. Plaintiffs sued for $3,000 damages for refusal by defendants to take delivery of certain hemlock, spruce and balsam which plaintiffs contracted to supply under a contract made in 1907. His Lordship found that plaintiffs had executed their orders properly and that defendants had no ground for not taking delivery. The counterclaim was for 100,000 feet of lumber short delivered in 1906, on which a loss of $2 per thousand for claimed.

Timber Limit Case Settled—The timber case of Bowes v. Storrs, which was partially heard before a jury and Mr. Justice Morrison at Vancouver recently, has been settled without a judgment being required from them. The plaintiff, John R. Bowes, alleged that Dr. Henry Storrs, of the United States Immigration Bureau at Vancouver, sold him a timber limit under misrepresentation, and he sued for the cancellation of the agreement, the return of $400 paid and damages. The case was settled by the defendant undertaking to pay the plaintiff part of his claim.

CAMP DEPARTMENT

An Ontario Lumber Camp in January

Thirty degrees below zero and the sun glittering in the steel gray sky like a ball of fire, but giving forth about as much heat as a diamond; this was the way of the weather during the first week in January in most of the lumber camps of northern Ontario, and the men went out to their day's work at road making with a vigorous stride. The sun has not yet climbed the eastern slope before the lumber jacks are drawing on their moccasins (unless they slept with them on), by the glimmer of a lantern flame. It is something to think upon afterwards if one gets a glimpse inside of the men's bunk house in a northern camp during the winter months just as the men are preparing for the day's work. A stranger would be struck more than anything else by the odd collection of wearing apparel hanging from the beams. Moccasins, boots of every description, overalls, weird looking hats, snowshoes, mitts, sweaters, socks, stockings, everything conceivable in the form of clothes and much that is not conceivable to the mind of a city dweller, hang from the rafters. Two rows of bunks, an upper and a lower, line each side of the house. The men, who a few minutes ago were snoring comfortably in their bunks, get up shortly before six o'clock and begin chattering in a dual sort of tongue, for French and English, in a wonderful mixture, make up the language of a lumber camp crew.

Georgian Bay Lumber Company's Camp near Bala, Ont.

Without ceremony and with little of greetings, the men bundle forth from their camps and scamper across the snow to the cook house. Breakfast is eaten by lamplight. Oatmeal porridge, beef stew and pork, bread and butter, doughnuts and syrup are the staple foods, but there are delicacies in the shape of mince pie and apple sauce, prunes and the ever welcome beans, which add variety and leave a lingering reminiscence on the palate of the lumber jack as he swings his axe in the long day's work.

There is no delay when the meal is over, no gossiping over a smoke. The lumber jack is a man of business. The very conditions of his life in the open, with the thermometer trying to touch bottom, make him a vigorous, quick-moving man. Sometimes the foreman is apt to think that a man might get through more work in a day than he does, but on the whole the lumber jack is a serious worker while the daylight lasts. He lingers no more in the cook house than is sufficient to stock him with warmth-giving food to last until the mid-day lunch. Then he is off again to the bunk house to array himself in his outdoor clothes and strike the trail to the forest.

As the men trip forth to their appointed gangs, they chatter and joke in a fashion which would seem strange in a corporation laborer. There is none of that dour silence which proclaims the city laborer with his pick and shovel. The lumber jack is a child of nature. He watches for the sun to rise and reads the weather signals in the sky. He talks and sings while he swings along with a firm stride. His muscles are taut and he has a nerve system which would defy the most alluring patent medicine advertisements to indicate a symptom of trouble. As he tramps along in the morning, daylight breaks upon him suddenly. When he reaches the spot where yesterday's work was finished he resumes the task where it was left off and seems to enjoy, more almost than sleeping and eating, the variety and action of his work among the trees Of course there are lumber jacks and lumber jacks, but the old timer who has been at the work most of his life is a faithful worker, and though he may seem to be doing little more than shovelling snow or clearing away brush, it is a revelation to see how much further the roadway or the clearing reaches at the end of the day. In the road making, which is the principal work during the early part of January, small gangs are allotted to different parts of the timber limit. Some ten or twelve men form a gang. One or two chop down the trees which obstruct the proposed roadway. Others clear away the brush and tangled roots and trample down the snow. The work progresses steadily and with almost scientific precision.

Weather conditions are all-important in a lumber camp in northern Ontario, as, indeed, they must be in any camp after the trees have been cut. The great thing is to get a good hard lasting frost. During the present season the frosts have been too short of duration to be of much use. The road work has progressed fairly well, however, but the cold spells have been brief and followed by soft weather, so that up to the first week in January it was impossible in most places to think of teaming the logs. By the middle of January, however, it was expected that the roads would be in good shape and the teaming started. Then the horses come into play and the logs are hauled from the skidways where they have been piled, and taken to the water's edge. The crack of the whip and the neigh of the horse will soon be heard and the heart of the lumber jack will commence to beat a little faster as he thinks of the spring which is drawing nearer. Of all the seasons in a lumber jack's diary, the time of the spring drives is the one he loves the best. Many a story is told of his longing to get back again into civilization and squander the money he has earned during the winter months, but above even the delights of the town, far and away above them in the mind of the old-time lumber jack, is the enjoyment of the days upon the river with danger and hard work going hand in hand

There is nothing more inhospitable looking to the eye of the city dweller than the group of log shanties which he sometimes sees through the window of a passing train. Exposed to the winds and buried in the snow, they have little suggestion of comfort, yet there is nothing more hospitable looking to the eye of the lumber jack as he returns from his day's work, than the first glimpse of the shanties as he climbs the last hill and sees the smoke curling upward from the cook house. A good meal and an hour or two of rest are in store for him before turning in for a long night's sleep. The shanties are well warmed, the food is good, if the cook is capable—and he must be so to keep his position. A library with papers, magazines and books is generally available for those who care for reading. Sleep comes early to a man who is working in the open air from daybreak until dark. The men retire at about nine o'clock and soon nothing is to be heard but a chorus of snores from the slumbering lumber jacks.

The illustration appearing herewith is a view of the camp of the Georgian Bay Lumber Company at Nine Mile Lake, a few miles south of Bala, in the district of Muskoka. Some fifty men are employed in this camp. The foreman, Mr. Geo. Lovering, is one of the best known men in the northern camps. He has spent his life at the work and is conversant with all its details. He has a capable crew. Not the least capable, and in the opinion of the men by far the most important, is Mr. J. A. Griffin, the genial cook, who devotes himself to the preparation of porridge, beef stew and bread, and in the intervals finds time to turn out pies, cookies, puddings and other dainties dear to the tongue of the lumber jack. Mr. Griffin is fortunate in having his son for his assistant. Between them these two men encompass a vast amount of work, and upon them depends in no small degree, the health, happiness and contentment of the men. The illustration shows the camp to be located in a picturesque spot. The houses are snugly built and comfortable. They are of generous proportions and well ventilated. They include the foreman's house and library, not shown in the illustration; the cook house, larder, men's bunk house, stable (for the camp boasts of many fine horses and an excellent cow), a blacksmith shop and a number of smaller stores, tool houses, etc.

When one takes into account the convenient location of this camp, being only a few yards from the C.P.R. railway siding, its splendid facilities upon the Black river, which connects directly with Georgian bay, where the logs can be quickly towed to the mill at Waubaushene, and the comfortable layout of the camp itself, it is little wonder that the men are well contented with their lot and stay by the camp throughout the winter's work. The limits contain an excellent quality of white pine and a small amount of hemlock, balsam, spruce and tamarac. The hardwoods are only present in small quantities, but are amply sufficient to keep the camp well supplied with fuel. The Georgian Bay Lumber Company have other limits at Wahnapitae and other points further up the Georgian bay. The Nine Mile Lake limits were not worked last winter, as the men were needed in other camps more urgently. This year, however, a large number of logs will be taken from this camp to help supply the mill during next summer.

Burns

A Lumberman from Ottawa Valley writes us as follows:

DEAR SIRS:

The Solid Tooth Saws I purchased from you last spring have been doing first class work ever since. I have never had any trouble with them. The Burns Saws are the best, as they are evenly tempered and will keep an edge longer than any other make of saw used here. Yours truly.

How $5,000 will net you $3,000 to $5,000 a year for life

READ CAREFULLY

MILL SUPERINTENDENT. WE OWN IN Nova Scotia new small complete mill, capacity 15,000 to 20,000, lath mill 30,000, located mouth of river, tide water, that will furnish spruce and white pine for 25 years guaranteed. Cheap rates Boston and New York. Help—Scotch descent, plentiful. Absolutely no other industry near. 80% wages paid through commissary, which will net $1000 year profit. Owners live a thousand miles away, not practical mill men, but will market all material at $3 to $4 per thousand, net profit to you. To one or more thrifty economical practical men, this is a chance of a lifetime.

Full particulars post office box 285, Geneva, N.Y. 2

Sale of Valuable Timber Limits

In the Lake Temiscamingue District

THE UNDERSIGNED OFFER FOR SALE by tender, Berths Number 1 in the Second Range and No. 1 in the Third Range, Block A., in the Province of Quebec.

These births lie immediately east of the interprovincial boundary line, for a distance of twenty miles, measuring north from the tenth mile post north of Lake Temiscamingue

They have an area, as described by the current licenses, of ninety and one-half square miles, and the timber growth is mostly spruce of a superior quality.

Tenders will be received up to twelve o'clock noon of the FIRST DAY OF MARCH NEXT. The highest nor any tender not necessarily accepted.

Any further information as to terms and conditions of sale, or other particulars, can be had by inquiry from the owners.

THE BRONSON COMPANY.

Ottawa, 1st December, 1909.

MISCELLANEOUS

Pulpwood Propositions

AMERICAN PAPER MILL OWNERS ARE inquiring for Quebec holdings because they simply must have the raw material in spite of tariffs or anything else. To those interested we say let us show you the wealth of pulp tributary to our town as a manufacturing point and coming either from Ontario or Quebec waters to Lake Temiskaming. CYRIL T. YOUNG, Chairman, Publicity Dept., Board of Trade, Haileybury. 5

For Sale Timber Limit

20,000,000 PINE, HEMLOCK AND HARDwood. Address JAMES LUDGATE, Parry Sound. 5

Roofing the Lumber Yard

A good quality of lumber piled on the mill yard for drying and seasoning is usually protected from the direct rays of the sun by what is termed covering boards. As a rule these boards are sound, but not very valuable for lumber, and in a very short time become warped and discolored. The writer recently saw a stock of boards on a mill yard over which a permanent protecting roof had been built of rough boards. Would it not be economically wise, where lumber is to be piled on the mill yard each year for drying, to erect a permanent roof upon suitable posts, using waste boards and covering same with a waterproof and sparkproof paper. Many mill yards are entered by locomotives, and such a covering for the lumber would furnish a protection against fire from sparks, of considerable value. The mill yard would thus be made permanent in its defined area, establishing a fixed area around which could be defined a permanent clear space. There would be no unsightly weather-beaten lumber on the mill yard, and in the long run this better class of protection for the mill product should cost no more than the crude custom of covering each pile with rough boards that will have little or no value after one season's use. Why not take your present supply of refuse covering boards, create such a permanent spark-proof shelter, and thus end your covering board troubles?

First Aid in the Camps

A feature of the work being carried on by the Canadian Camp Brotherhood at Vancouver, B.C., is the opportunity offered each member to get hold of some useful information as to what steps to take in case of an accident. First aid lectures are given each Thursday afternoon at the rooms of the Brotherhood, by the medical officer, who is also present each day for a certain time in order to attend to any cases. The lectures deal with important phases of life in the woods, such as the arrest of hemorrhage. Often men, whose lives could have been saved by anyone with a slight knowledge of first aid, have been left to bleed to death owing to the helplessness of their companions, who did not know what steps to take to arrest a hemorrhage. Accidents in the logging industry are common and therefore a knowledge of what to do in case of emergency is an invaluable asset to all who spend their lives in camps. The lecturer explains the positions of the various arteries on a living person, and shows them how to bandage, and where pressure should be applied to prevent a person bleeding to death. Common soap is a very good substitute when no other antiseptic is available, and cleanliness is one of the principal rules to be observed when treating wounds of all descriptions.

. . A Remarkable Tree

Among the curiosities of tree life is the sofar or whistling tree, of Nubia. When the winds blow over this tree it gives out flutelike sounds, playing away to the wilderness for hours at a time strange, weird melodies. It is the spirit of the dead singer among the branches, the natives say, but the scientist white man says that the sounds are due to a myriad of small holes which an insect bores in the spines of the branches. The weeping tree of the Canary islands is another arboreal freak. This tree in the driest weather will rain down showers from its leaves, and the natives gather up the water from the pool formed at the foot of the trunk and find it pure and fresh. The tree exudes the water from innumerable pores at the base of the leaves.

As a result of some recent investigations by the United States Government it has been shown that before creosoting timber it is necesiary thoroughly to peel off the thin inner bark of the wood if the preservative is to be absorbed by the timber to produce its maximum effect.

TIMBER MAPS

The undersigned can furnish to order timber and township maps of any section of New Ontario. Specialty of Abitibi timber maps. The advertiser was five years in the Ontario Survey Branch and knows the country thoroughly.

Review of Current Trade Conditions

Ontario

There is little to note in the trade conditions in Ontario. The volume of trade is well maintained and prices generally are unchanged. There is evidence of unrest among the retailers, however, who are inclined to expect increases in prices. There is a somewhat better feeling in hemlock, the markets in the United States having improved a little. British Columbia timber in Toronto will probably advance in price shortly, as a result of the strong condition of the western markets. Hardwoods generally are in fair demand, with a tendency toward improvement.

There is a tendency among buyers of low grade white pine at Ottawa to expect lower prices, but manufacturers are holding out against them. No decrease of price can be expected until the middle of February at least. Box board is steady at about $14 to $17, well assorted 12 to 16-foot legnths, 1-inch by 7-inch and up, bringing the top price. For the same lengths 3-inch to 6-inch wide, the price is from $15 to $16 per thousand. Assorted lengths from 6 to 11 feet, 1-inch by 4-inch and up, bring from $13 to $14.50. There is a first rate demand for lath and first quality is scarce. Prices have been tending upwards during the last month and higher prices are looked for early in the spring. An advance of from 30 to 40 cents is quoted in spruce mill run lath 1⅜-inch, which is now bringing from $2.50 to $2.90. Indications at present are that the log cut this winter will be greater than was expected at first. The absence of hard frost affected only a small number of the lumbering districts. Shanty men have been easy to obtain.

Eastern Canada

The logging season in New Brunswick so far has been rather an unsatisfactory one, principally on account of the lack of frost during the early part of the season. It was not until the third week in December that frost set in permanently. Acordingly the amount of logs already taken out is smaller than was expected. Much improvement has taken place, however, during the last fortnight and good work is now going on. There is plenty of snow in the northern parts of the province. Logging in the southern part of the province, however, is still backward, on account of lack of snow.

There is reason to expect that during 1910 the manufacturing season will be of about the same length as it has been during the last two years. There is a comparatively small quantity of spruce and cedar logs being wintered at St. John. It is not expected that sawing will be commenced until early in May.

There is much activity in the spruce lath trade at St. John. Prices are fluctuating more than those of any other product. There is rather a tendency towards pessimism among holders on lath, yet it is just a question whether they are justified in taking such an attitude. There is little doubt, however, that the upward tendency of lath has come to an end and the market is if anything exhibiting a weaker tone. The stocks of spruce lath at St. John are not heavy the total being only seven million at most and 80 per cent. of these are dutiable. The quotations of these are from $2.75 to $2.85 per thousand on the wharf at St. John.

Cedar shingles are dull with little indication of any approaching activity before March. Shipments of shingles during the next three months will probably be light. The holdings of high grade cedar shingles at St. John at present amount to no more than four and one-half millions, on which the quotations are from $2.75 to $2.85 for "extras" and $2.20 to $2.30 for "clears," f.o.b. schooner St. John.

Montreal markets are quiet but have a firmer tendency. The English demand is reported to be strengthening. Common lumber is firm, spruce is, if anything, stronger. Pine is selling well and is scarce. Hardwoods are steady. Shingles are quiet. Dimension timber is strong.

A good spring business is expected at Boston for eastern spruce. Cold weather has set in in the woods and lumbering operations will probably be about normal. Spruce frames 9-inch and under are being offered at $24 to $24.50, and some business has been done at the latter price. The former price, however, is much more general.

There is no improvement in the Boston market for shingles. Offerings are extensive and prices are easy. Although Canadian manufacturers are reported to have large stocks, they are not seeking to force new business, and are maintaining the price fairly well. Cedar extras are selling at $3.50 and some holders are asking $3.75. Laths are steady and quiet.

Western Canada

The outlook for a heavy demand from the prairies during 1910 is excellent. Manufacturers on the coast report general conditions to be most encouraging. The stocks in the mills are only about half what they were a year ago and the demand is much better than it was twelve months ago. Manufacturers on the coast are expecting a general stiffening of the market in March or April. A general advance in prices is not expected but an increase is looked for in several grades. Buyers from the prairies have been flocking to the coast, no less than 165 yards having been represented in the visitors who arrived within a few days. The supply of logs is fully equal to present requirements. Good camp run of fir logs are worth $9 and the indications are that before spring they will advance one, and, perhaps, two dollars. Shingles are still unsatisfactory and the prices are low. Good cedar logs are selling at $8 to $11, and bolts bring from $5 to $5.25 delivered at the mill.

Great Britain

The new year holidays resulted as usual in the timber trade in Great Britain generally being very quiet. What with the new year and the elections, business has been sadly neglected. At Liverpool the little spruce that has arrived has been sold on an unchanged price basis. Dealers are expecting to have to pay higher prices for spruce and pine deals, boards, etc., for next season. The pitch pine business at Liverpool is also quiet as a result of a divergence of opinion regarding values, between shippers and buyers. At Manchester, pitch pine remains firm, selling especially well in the good qualities of sawn wood and prime sidings. A Southampton dispatch reports the arrival of the four-masted barque "Cissie" from Vancouver, with a part cargo of 450 standards of British Columbia pine. The lumber turned out in good condition and many inquiries were immediately received from prospective buyers. At Sunderland a Quebec shipment with waney pine, elm, oak, spruce and pine deals and square pine, is reported, but the demand for them is not strong. Business at Glasgow has been very dull. One or two sales of St. John spruce are reported from the recent import at prices generally steady and some selling has taken place from stored stock, of which there is now very little in first hands.

United States

Cold weather of the real winter variety has, to a great extent, reduced the demand for lumber at Chicago. Building is reported to be at a standstill but many new buildings are planned for erection early in the spring and a strong movement of material is expected between now and then. The outlook for northern pine at Chicago is quite encourag-

ing. There is a steady demand for No. 2 and better, and the prices are stronger. No. 3 also is firmly held, but Nos. 4 and 5 are somewhat dull. It is believed, however, that these grades will have a better market than they had last year. Hemlock at Chicago has become stationary, but inquiries indicate that a good demand is likely to develop in the near future. The expectation is that prices will be maintained and possibly advanced.

There are still quite a number of inquiries being received at Chicago for railway materials, but the business has not increased to any degree. There is a good demand for spruce and stocks are scarce. Stocks of western pine at Chicago are also hard to obtain and market conditions for this wood are unchanged. The southern pine market at Chicago has strengthened materially during the past fortnight, especially in regard to piece stuff of good sizes and lengths. It is claimed that the market is from 50 cents to $2 stronger than a fortnight ago. No. 1 dimension is scarce, but No. 2 is plentiful. The demand for shingles and lath at Chicago is seasonably small. Prices are unchanged. Cooperage stocks are low but trade is dull.

The Buffalo market for northern pine is stationary. There is a fairly good supply and the demand is about moderate. Low grades have been fairly steadily disposed of and the good grades are scarce. Hemlock is maintaining its position well in the face of the disagreeable weather. So long as prices are substantially lower than those of yellow pine, hemlock seems to be able to find plenty of buyers. Stocks are fairly extensive at Buffalo. Shingles are firm, the best demand being for red cedar 16-inch clears.

The hardwood market at Chicago is fairly active and prices are maintained. Planed oak is still scarce. Quartered white oak is somewhat quiet, but quartered red oak is comparatively active. Maple is moving fairly well with steady prices. Basswood is dull and birch is in good demand.

Market Correspondence

Ottawa Valley News—High Grades are Buoyant

Ottawa, Jan. 11.—Manufacturers of lumber in the Ottawa valley are holding out against efforts to buy low grade white pine at less than the prices quoted for the last month or so. Some manufacturers assert that buyers have an exaggerated estimate of the quantity of cull lumber in the district. This would be due to the unprecedented buoyancy of the market for the high grades. While no lumberman denies that the proportion of poor grades is large, they claim no sacrifice will be made. At least, there will be no weakening in quotation until well into February, when the trade will have recovered from the holiday lull. Inquiries show that J. R. Booth has apparently less cull lumber in proportion to his output than most other manufacturers. This is largely due to heavy sales he made during the latter part of the season. Box board continues to keep between the old quotations of $13 to $17 per thousand. The top figure is paid only for carefully assorted stuff in 12 to 16-foot lengths, one inch by seven and up. The same lengths one inch thick ranging from three inches to six inches wide, run from $15 to $16 per thousand. The lowest priced box board is generally assorted in lengths from six to eleven feet and is one inch by four and up. The price ranges from $13 to $14.50.

The lath market is very buoyant, and although the big producers did not fall behind the quantity sawn in 1908, there is a scarcity of first quality. There has been an upward tendency in prices in the last month and manufacturers assert that next spring will certainly witness higher quotations all round than are given at present. The W. C. Edwards Company cut 25 million lath during the summer but are well sold up. J. R. Booth, the next largest producer, also reports a firm market for No. 1 lath. Spruce mill run, 1⅜-inch, is being quoted at an advance of 30 or 40 cents.

The cold weather has given an impetus to hauling in the lumber camps. Until the beginning of January the temperature had scarcely reached zero at any time, and the drop for a few days to 15 or 20 degrees below zero wrought a splendid change in the roads and made lakes and rivers safe to cross. Usually the swamp or low lying level grounds are sought by lumbermen as a location for roads. These places are the last to freeze over. J. R. Booth informs the "Canada Lumberman" that road making has become a very important part of his shanty work and he has many snow ploughs in action in the woods. When the track is marked out the top is sprinkled with water. If the weather is then cold enough to freeze the surface over with a coat of ice the road will be ideal for drawing. The absence of this much desired freezing during December was a great hindrance to shanty work. Except in the westerly limits of the Ottawa valley there was plenty of snow. When the cold spell came on there was a great rush of teams and more men to the shanties. J. R. Booth, following his usual practice, is cutting all he needs himself. Fraser & Company are not operating in the woods, but will purchase logs enough to cut at least 6,000,000 feet of lumber in 1910. As stated in previous correspondence the W. C. Edwards Company has reduced its work in the lumber camps. This is the beginning of a gradual reduction in the big firm's lumber activity. The company has enough logs ahead to saw to its full capacity in 1910, or some 80 million feet, but from then on fewer logs will be handled. The Edwards Company is going so extensively into the finer branches of lumber manufacture, such as making sash, doors, etc., and launching into power development schemes, that a curtailment of its activities in the lumber industry is necessary. It is understood that Senator Edwards is also considering a venture in the manufacture of pulp, but no definite statement will be made as to this.

Reports from the Hawkesbury Lumber Company, Gilmour & Hughson, Perley Lumber Company, and James Davidson show that these firms are taking out about the same number of logs as last winter. The prospects are that the log cut will in all instances exceed early estimates. The absence of hard freezing affected only a limited number of lumbering districts, and camps, as a rule, are free from disease among men and horses. There has been no difficulty in replacing men when hands returned home. The Perley Lumber Company, whose amalgamation with the Riordan Paper Company is nearing completion, are taking out logs in the usual way. Approximately 90 per cent. of the cut will be spruce logs. The co-operation with the Riordan Company on the opposite side of the Rouge river will mean a great saving in handling logs, as timber will always be cut at the most adjacent plant. A feature of the Perley Company's operations of the past season was the increase in cut of ties from 20,000 to 40,000. There was a corresponding addition to the company's production of shingles as a result of handling more tie timber, so that its cut of shingles in 1909 was nearly 5,000,000. The company's principal mill, at Calumet, cut nearly 12,000,000 feet of lumber, including such special lines as clapboards, being a considerable increase over 1908. The output of some of its smaller mills fell off a little but altogether the production is about equal to that of 1908. Like Mr. Booth, the Perley firm was always better sold up in low grade lumber than most of the manufacturers. The Montreal market took a large quantity. The Perley Company is now completely sold out.

The Ottawa Lumber Company has sold its stock and leased its retail yard, planing mill and sheds at Hurdman's Bridge for a term of ten years to W. H. McAuliffe, who is going more extensively into retail and wholesale lumber business. The Ottawa Lumber Company will devote its energy to wholesale and manufacturing. Mr. T. F. Elmitt, formerly of Hurdman & Elmitt, is head of a new company capitalized at $20,000. Lucas & Dupont are building a sash and door factory at Aylmer. This is regarded as an important new industry in the town. The great advance in local building promises much business to these new companies. The permits for the past year amounted to $4,500,000, as compared with $1,800,000 the year before. In December alone $104,000 worth of building permits were issued, which is over three times as great as in December, 1908. Lumbermen are almost unanimous in the opinion that trade, local and export, is about to pass through a buoyant period.

New Brunswick News—Logging Season Backward

St. John, N.B., Jan. 8.—During the past fortnight a number of events of more than usual interest have transpired in connection with the lumber trade and industry.

The most important phase of the industry to local manufacturers at this particular time is the getting out of logs for the manufacturing season of 1910. The present logging season has been a somewhat arduous one thus far, owing chiefly to the lack of frost during November and the first two weeks of December This lack of frost made the season very backward and the work very expensive. The quantities thus far gotten out are somewhat behind the estimates of costractors and other interested parties.

During the past three weeks conditions have improved considerably and much better work is being done; the weather is colder and, in the northern sections of the province, there is sufficient snow in the woods to enable the loggers to do satisfactory work. At the head of the St. John river similar conditions prevail and the work is going on expeditiously.

In the southern sections of the province there has been no snow until the last few days, and the work of logging is somewhat later than usual in getting under way.

At this time of the year the probabilities for the manufacture of lumber during the coming manufacturing season are always a subject of interest and importance.

Speaking of local conditions, all indications point to the conclusion that the manufacturing season of 1910 will be similar in length to the two seasons which preceded it, providing that no contingency such as the failure of the logs to come out or in the nature of labor troubles should cause a cessation of work at the mills.

The quantity of spruce and cedar logs being wintered at the local storage booms has not been as large during the past three winters as was the case previous to that time, and the present winter is somewhat

similar to the last three in this respect. During those years the starting of the mills has been later in the spring than hitherto, and such will be the case in the spring of 1910. It will of necessity be early in May before sawing is generally resumed.

The trade in spruce lath continues to be the source of considerable activity and is showing more life than any other line so far as changes in price and conditions are concerned. While there seems to be a feeling of a pessimistic nature in regard to lath, and there are rumors of a weakening in price, it is doubtful if conditions governing the trade in this line are as unfavorable as some of those interested claim is the case. At the same time there is no doubt that the steady climb in the price of lath has come to an end. It might be correct to go somewhat farther than this, and say that lath are slightly weaker, although such a condition would apply to the tone and not to any actual transactions which have taken place in the local market so far as is known.

Local stocks of spruce lath are moderate in quantity and no one firm is the owner of a quantity so large that there need be any hurry about putting them on the market. The total stocks would aggregate to between six and one-half and seven millions. Of these the much greater part (probably eighty per cent.) are dutiable, and upon this line of goods an enquirer would be quoted from $2.75 to $2.85 per thousand on the wharf at St. John.

The chief characteristic of the cedar shingle trade at present writing is monotony. There is little promise of any local activity in this line before March. The feeling in regard to this line is, locally at least, of a more hopeful nature, as it is asserted by those most interested that, with the freshening of demand in preparation for the opening of the spring business, prices are likely to reach a higher level. The shipments of shingles from this port during the next three months promise to be light and infrequent as the current prices are an incentive to hold rather than to place shingles on the market. At present writing the total local holdings of high grade cedar shingles would not be more than four and one-half millions. An enquirer would be quoted from $2.70 to $2.80 on "extras" and from $2.20 to $2.30 on "clears," f.o.b schooner St John.

How to Handle Australian Trade

Mr. J. S. Larke, Canadian Trade Commissioner at Sydney, Australia, in a report upon the timber industry at that port says: In the early stages the export of timber was mainly done by San Francisco houses, who financed the trade. Canadian mills accordingly sold their timber to these San Francisco firms. They, in turn, sold to large trading firms who made the importation of timber one of the incidents of their business. These latter again sold to timber merchants, men who had timber yards and did a distributing trade to contractors, large builders and smaller timber yards scattered over the city. The importers rarely had such timber yards. The rise of the Sydney middleman was due to the inability of any one merchant to take a whole cargo, as his financial position required considerable credit.

The method of trade remains to-day much the same, but the conditions have materially altered. The timber merchants have grown in financial strength and in the extent of their business. Owing to the heavier duties on small sizes, a good deal of the timber imported is recut, and thus the timber merchants have had to put in sawmill machinery. Under these altered conditions there should be a change in the methods of trade as, certainly, there is now no need for so many middlemen between the Canadian mill owner and the Sydney timber importer.

In regard to statistics of the imports of timber, these can only be obtained from the export returns of British Columbia and the States of Washington and Oregon. While these figures can be depended upon as giving the correct total importations, they are worthless as to the country from which the goods came. For example, in 1907, the Hastings and Chemainus mills reported shipping 11,111,619 feet in vessels which arrived at Sydney in that year, but the customs returns at Sydney show only receipt of 1,903,941 feet from all the Canadian mills. The balance was credited as coming from the United States.

Sydney is the largest importing timber port of Australia, though it does not supply the demands for Oregon in the mines of Broken Hill, which pass through South Australian ports. The domestic production does not affect the Sydney market for such timbers as Oregon, spruce or hemlock. There are pines cut in Queensland, but no quantity is received in Sydney, as the supply is not sufficiently large to cover scarcely more than home consumption.

The Canadian share of the market in 1908 was exceedingly small, due to the refusal by Canadian mills of the prices offered. To increase that share, it would be necessary to meet the competition with the Puget Sound mills. There have been too many middlemen in the business. Years ago circumstances required this, but whether all the middlemen could be excluded would depend largely upon the organization, capacity and capital of the companies exporting. There can be no question, however, that a local timber yard owned by the mill would have advantages. It would obviate the constant demands for reclamations made by timber merchants for either inferior quality or scant cuts in the cargoes supplied them. Timber would be sold directly from the yard.

Undoubtedly, Canadian mills have lost trade through prices being cut close and inferior timber, or timber not measuring to specifications being supplied. There is not much money made in such crookedness. The timber merchant is pretty certain to make a claim for losses thus incurred. A survey is held in accordance with regulations that have been made and the exporter is called upon to recoup the damages that may be awarded. Attempts to have mills represented by resident agents have not been successful since, when orders have been obtained, it has been found that the mill has not the capacity to supply the timber in the time required, or else has on hand orders that will prevent it from so doing. Timber brokers, therefore, prefer to hold themselves open to obtain cargoes from any mill rather than have the control of the output of one. If a lumber company had sufficient capital, capacity and organization, it undoubtedly could increase its trade by direct representation at this port, but the average mill has found it best to utilize the methods now employed in the trade.

Trade Enquiries

The Dominion Government Trade and Commerce reports contain the following trade enquiries. Readers of the "Canada Lumberman" may obtain the names of enquirers by writing us, enclosing stamped envelope and stating number of enquiry:

1939. Pine pickets—One of the best known firms of timber dealers in England desire to purchase pine pickets 48-inch x 1⅛-inch x 1⅛-inch.

1955. Agency abroad—A Yorkshire company possessing a connection among buyers, wish to secure the representation, on commission, of a first-class Canadian manufacturer of wooden handles suitable for hammers and picks, axes, shovels and hay forks.

1957. Saws, files, tool steels and machine irons—A Sheffield firm manufacturing saws, files, tool steels and machine irons ask to be placed in communication with Canadian importers.

1982. Timber—A large South African firm of retail house furnishers and cabinetmakers, desire to be placed in touch with Canadian shippers of the following wood straight from the saw: Ash, birch, spruce, poplar, pine and cedar. Quotations to be c.i.f. Durban.

2003. Box shooks—A Hull firm of importers of box shooks desire to get into touch with Canadian manufacturers who could give regular supplies. Must be cheap, clean sawn and with good finish. Prices to be quoted for random sizes c.i.f. Manchester or Liverpool.

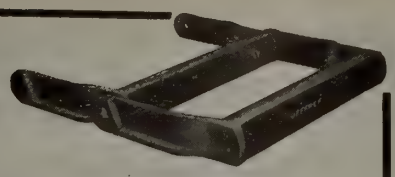
2006. Coachware stock—A Leeds firm of coachware merchants and importers (estab. 1857) would consider particulars and prices from Canadian manufacturers of bent and straight hickory and ash shafts, oak wheel spokes, rims, and similar wheel stock.

2008. Handles—A Leeds firm of importers of tool stock, such as handles for hammers, picks, hay forks, etc., would be interested in receiving particulars and prices from Canadian manufacturers.

Calendars for 1910

Wilfrid Talbot, wholesale lumber dealer, Montreal, Que., has sent to his friends a dainty little calendar, with an attractive illustration of a pretty girl in red.

A handsome illustration of the factory of the Waterous Engine Works Company, Limited, at Brantford, Ont., adorns a large wall calendar distributed by this company. The Waterous Company are noted for their excellent sawmill and pulpmill machinery.



"The Story of the Hunt" is the title of a splendid picture which adorns the calendar sent out by the Thos. Nagle Lumber Company, Limited, St. John, N.B., and Montreal, Que. The calendar is artistically designed and the color scheme of the picture and mount are very attractive.

Sadler & Haworth, tanners and manufacturers of oak leather belting, Montreal, Toronto, St. John, N.B., Winnipeg and Vancouver, have distributed a fine large office calendar, embellished with a colored illustration of the making of a 72-inch 3-ply belt. The coloring and the designing give a most attractive appearance to the calendar.

Knowles & O'Neil, dealers in lumber and pulpwood, Hochelaga Bank Building, Quebec, have selected a fine picture, entitled "The Morning After Election," to decorate their 1910 calendar. The picture shows a number of old men gathered around a man who is reading the returns from a newspaper. The picture is in colors and is well designed. The calendar pad and picture are mounted on a large brown board, making an attractive ensemble.

Wistar, Underhill & Company, wholesale lumber dealers, Real Estate Trust Building, Philadelhpia, Pa., have issued an extremely practical calendar for 1910. The calendar consists of a large pad showing the business days of one week on each page and containing generous space for engagement entries. The mount is a handsome red board with the firm's name in white.

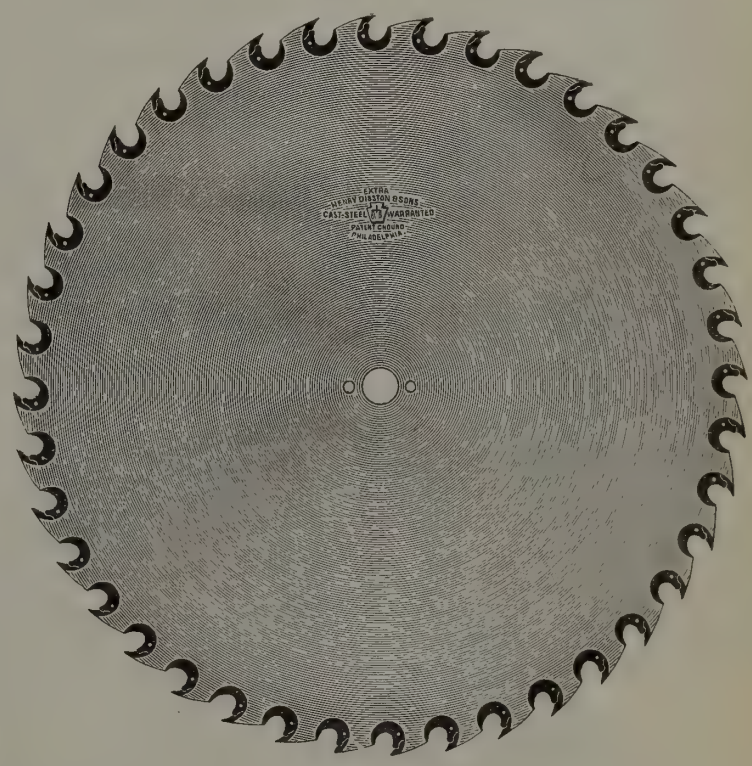
Disston

Consider this somewhat interesting FACT the next time you need Saws—



EVERY NOTABLE IMPROVEMENT IN SAW-MAKING HAS BEEN ORIGINATED OR CARRIED INTO PRACTICE FIRST IN THE FAMOUS DISSTON SAW WORKS.

The lumberman of to-day demands better saw service than ever. EVERY DAY the Disston saw experts are on the alert for some new improvement in saws. Disston SAWS for Lumbermen cannot be matched—they have no equal—always up-to-date.

They have occupied that proud position for some seventy years.

You get more work out of a DISSTON SAW simply because "more" is put into it at the famous DISSTON SAW WORKS.

Consider the Service a DISSTON gives.

NOTE:—Almost every dealer carries the Disston line of Saws, Tools and Files, but if your dealer should not have what you wish when you want it, let us know at once, and we shall see you are supplied without the slightest delay.

EDGINGS

Ontario

Loveland & Stone, Cutler, Ont., will have a stock of lumber at Sellwood next season. They are now putting in the stock of logs for the mill at that place.

The Temiscaming Lumber Company, Limited, Toronto, capital $75,000, has been incorporated by G. H. Kilmer, J. A. McAndrew and W. H. Irving, barristers, all of Toronto.

The steamer Hopkins was obliged to unload a cargo of lumber at the Laidlaw Lumber Company's wharf at Sarnia, Ont., recently, owing to the boat being unable to get through to Lorain, Ohio, on account of the ice in Lake St. Clair.

G. J. Desbarats, Deputy Minister of Marine and Fisheries, is receiving tenders up till Jan. 29th, 1910, for the supply of 75,000 cubic feet of round white pine timber and 12,000 cubic feet of round spruce timber for delivery at the Government shipyard at Sorel.

Seaman Kent & Company, hardwood finishers, will erect a plant at Fort William, which will employ 100 men and will ship to the west the first year 500 carloads of finished material and 800 carloads a year afterward, provided the city will exempt them from all but a nominal tax. The proposition will be submitted to a vote of the citizens.

Hugh Baird & Sons, formerly of Markdale, Ont., now at Thornbury, Ont., are again entering the lumber business in the spring and expect to put up a new band saw mill of the best fireproof construction. They will carry on a large lumbering business and also expect to deal extensively with the Reduction Works Company of that place.

Mr. W. H. McAuliffe has leased the Ottawa Lumber Company's retail yard, planing mill, sheds, etc., for a term of ten years, and purchased their retail yard stock of lumber. The Ottawa Lumber Company, Limited, will continue their business under the same name and devote their time exclusively to the wholesale and manufacturing trade.

Word was received on January 4th by the Ontario Provincial Government that a fire at Cochrane had burned all the Government offices, with the records and papers relating to mines, lumber and other properties. While the destruction of the official papers may prove embarrassing in some cases, the majority were copies of originals which are in the department, and consequently it is not thought the provincial loss will be serious.

Oak timber valued at $200 was stolen by three Indians from Cornwall Island, Ont. Lawrence White, Mitchell Hops and David Point were convicted of the theft. The timber, owned by the St. Lawrence Power Company, had been towed to St. Lawrence Park, and was cut in two by the red men. One piece was brought to Cornwall. Bringing the second piece to town the men were met by officers, who, after a great fight, overpowered the Indians, placing them under arrest.

The Beaver Manufacturing Company, of Beaver Falls, N.Y., which manufactures wall paper, wall boards and wood fibre, has written to the mayor of Ottawa regarding a proposal for locating there. A representative of the firm has already arranged with two of the Chaudiere firms for a supply of pulp which is used in the manufacture of its products, and desires a site near there, and, if possible, near a railway. The firm makes a specialty of wall board, which is made out of compressed pulp.

J. R. Booth, Ottawa; the E. B. Eddy Company, Hull, and the James Maclaren Company, of Buckingham, are taking out enough pulpwood to keep their mills running to the fullest capacity in preparation for what promises to be a good season. While the trade of two of these firms is dependent to a considerable extent on the attitude of the United States Government with regard to the application of the maximum tariff against Canada, there is little evidence of concern about this matter. Mr. Booth is increasing the capacity of his pulp producing plant by 60 per cent. and expects to use all its output in the manufacture of paper.

Eastern Provinces

The Austin Lumber Company, of Thetford Mines, has gone into liquidation.

Marcil Guennette, lumber merchant, Montreal, Que., is stated to have sold his assets.

Fifteen inches of snow is reported on the Restigouche river, in northern New Brunswick.

The Jonquiere Pulp & Paper Company, of which Mr. Wm. Price, of Quebec, is president, have completed their plant for the production of news print paper, and have started operations.

The export of pulp wood from the Labrador district, which is under the jurisdiction of Newfoundland, has been prohibited by the Morris Government following the precedent established by the late Bond administration.

The Davison Lumber Company, Bridgewater, N.S., are taking out the two rotary saws at the upper mill and replacing them with 8-foot single band saws on the one side and 8-foot twin band saws on the other side. They are also adding a horizontal band resaw. The company are operating to their fullest extent in the lumber woods this winter.

The Canada Paper Company, of Windsor Mills, has installed an important addition to its power plant. It is now getting from the Shawinigan Water & Power Company 600 horse power, which is transmitted 100 miles. The transmission line has been completed and the motors installed. The line works splendidly and the installation is a success in every way.

During December the Newfoundland Pine & Pulp Company, operating mills at Badger Brook and Point Leamington, shipped abroad over four million feet of lumber. The greater part of this, 2,800,000 feet, was shipped to South America. The company have now about 225 men in the woods at Badger and Leamington cutting, who are expected to bring out about five million feet.

Western Canada

Geo. Wright, lumber merchant, Odessa, Sask., is stated to have assigned.

The Pioneer Lumber & Implement Company, Limited, Moose Jaw, Sask, have sold out to F. J. Grobb.

The Fraser River Lumber Company, Fraser Mills, B.C., have abandoned their appeal against their personal property assessment.

All the woodwork in the addition to the Empress Hotel at Victoria will be of timber grown in British Columbia. The timber to be used will be sound fir, free from all defects.

The British Columbia Telephone Company is calling for tenders for 2,000 35-foot cedar poles, for delivery in Vancouver. Specifications are to be secured from the construction department, Vancouver.

The Watts Manufacturing Company, of Wattsburg and Proctor in the Kootenay district, are installing a wire wound wooden pipe plant in connection with the Proctor mill. The plant is nearly ready for operation.

Edmonton reports state that it is not expected that the booms which the Dominion Government are placing on the river will be completed in time to hold the winter's cut of logs; the cut, therefore, will be curtailed to a certain extent.

W. Cowan & Company, lumber manufacturers, Prince Albert, have reorganized their company and expect to be operating this year under the name of "The Big River Lumber Company, Limited." They did not operate at all during the season of 1909.

The freighter Argyle is sailing from the Fraser River Mills about the middle of this month with nearly 3,000,000 of lumber for Point Pirie, Australia. The cargo consists of 2,500,000 feet for mine cribbing and the balance lumber for general purposes.

The Michigan Puget Sound Lumber Company has been registered in British Columbia. The head office of the company is at Detroit, Mich, and the capital stock is $50,000 in $10 shares. The head office for British Columbia is at 1114 Langley street, Victoria.

Mr. John Hanbury, of the Hanbury Lumber Company, Brandon, Man., has opened the mill in the Duck mountains to the north of Brandon this winter, and has 150 men and 40 teams at work. He expects a drive of five million feet of logs in the spring, all of which will be cut at Brandon.

Eigineers of the G.T.P. who have been working on the Pembina river, west of Edmonton, have arrived in Winnipeg, bringing with them samples of petrified rock which are said to be very common in the bed of the river. They appear to be portions of spruce trees and show each "ring" of the grain.

The Rat Portage Company are reported to have closed down their large lumber mills at Harrison Mills, B.C., for an indefinite period. A great many men who were employed there have been thrown out of employment for the time being. It is hoped that the company will see their way clear to resume operations in the near future.

The steamer Chieftain has been loaded by the Westholme Lumber Company for Mr. Sol. Cameron, and will be taken to Prince Rupert. She carries 400,000 feet, which will be used in erecting buildings at the new city. The Australian mail line steamer Katanga recently loaded 1,800,000 feet of lumber at Vancouver and Eureka for Sydney, Australia.

Puget Sound lumber mills are experiencing the most serious shortage in logs that has confronted them at this time of the year in many seasons. As a result, mills are paying $1 a thousand feet in excess of the association quotations, which are $6, $9 and $12. Although the association has not increased its schedule, an advance is expected in February.

The Prince Albert Lumber Company have purchased their third ice road steam engine. These engines are replacing the horse in logging operations in the woods north of Prince Albert. Altogether in northern Saskatchewan there are twelve in use. The lumbermen of the district are complaining that the mild weather is severely interfering with their lumbering oprations and they are praying for a good spell of cold weather.

Field Bros., of Victoria, B.C., have purchased a large block of timber lands on the east coast of Vancouver island located between Beaver Cove and Robson's Bight, for $8,640, from D. W. Heuston and Steve Cook, of Alert Bay. The timber lands, which have been held for some time by the vendors, are well stocked with yellow cedar, a recent cruise by Mr. Heuston showing an average of 22,000 feet to the acre. The timber land sold comprises 1,920 acres and is located a mile and a half from the salt water, the price paid being $4.50 an acre.

W. Butler has secured a contract for supplying the Moresby Island Lumber Company mill at Queen Charlotte with logs for the next three years, the logs to be cut on the limits owned by the Moresby Island Lumber Company on Skidegate Inlet. This company have their entire output contracted for with foreign buyers for several years. The capacity of the mill when the handsaw is added to its present equipment will be about thirty million feet per year. Several large tie camps will be started at various points of the inlet this year.

G. M. Annable, of Moose Jaw, Sask., and G. B. Campbell, of Wetaskwin, have taken over the Violin like timber limits from the Church interests. The company will be operated under the title of the Violin Lake Timber Company. A mill of 40,000 feet daily capacity is in readiness to begin operations, and the company are now building a flume two miles in length from the mill to the railway siding, where the dry kiln and planing mill are located. Approximately 150 men will be employed in the mills and logging camps. The limits are 4,700 acres in extent and estimated to contain 100,000,000 feet of timber.

Stocks of lumber throughout the Canadian West are reported to have diminished very considerably and it is feared that the supply of dry lumber for use during the building season of 1910 will be inadequate. In view of such a condition, the lumber companies generally are placing as many men in the woods as they can possibly handle. Another feature stimulating the logging industry is the demand for ties. For a supply of these for use in the Canadian West, the three largest Canadian railways are all directing their attention to the timber resources of northern Manitoba and northern Saskatchewan. In these districts during the coming winter over 3,000 men will be employed in the getting out of ties and logs. The Prince Albert Lumber Company will alone have 1,500 men at work, and the balance will be employed by various other lumber companies. The Big River Lumber Company, Saskatchewan, purpose during next summer erecting north of Prince Albert a mill with a capacity of 50,000,000 feet per annum. Plans for this mill are already completed, and it is expected, according to a statement made by the manager of the company, that the mill will be ready to operate about August next.

MANUFACTURERS OF QUALITY LUMBER AND SHINGLES

If You Aim to have a Full Line—of Lumber

the same is not complete without our

Spruce, White Pine, N.B. Shingles, Lath

THE SPRUCE, you know — the same old reliable stock, small, tight-knotted, smoothly dressed, the article that's helped you build up your trade.

THE PINE, you should know if you do not—a beautifully tight-knotted board, good grades, and a smooth job of dressing, if you wish it dressed.

THE SHINGLES—smoothest sawing, best grades, the shingles that made Fenderson famous.

THE LATH—made from slabs, a nice uniform article, in 1¼ in. and 1½ in. widths.

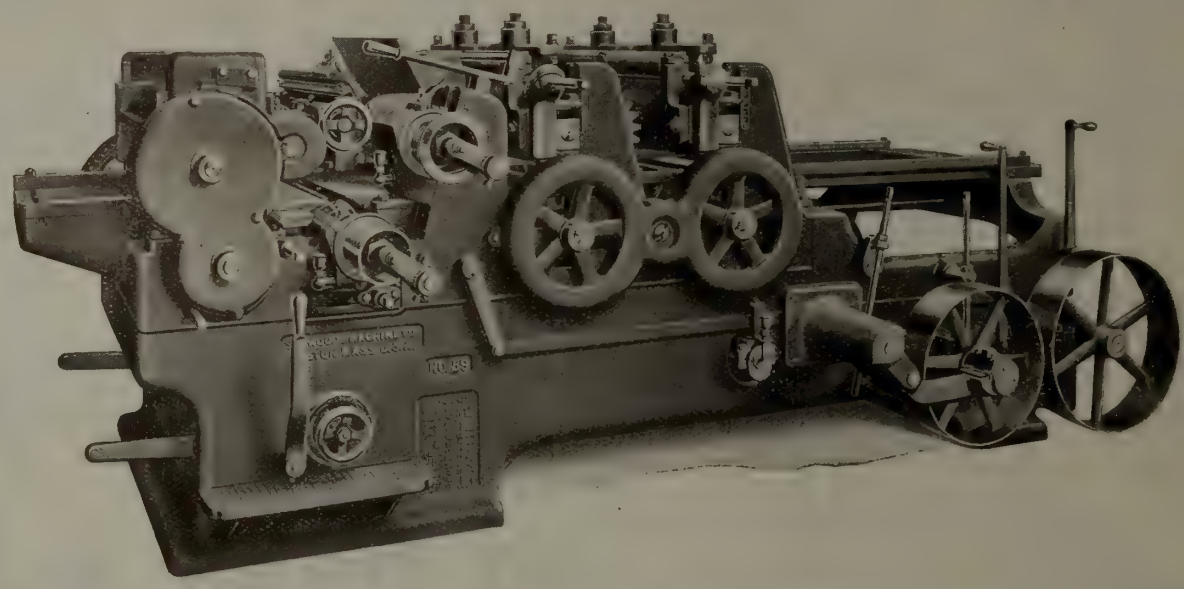
OUR QUALITY STOCKS: Flooring, Ceiling, Partition, Novelty Siding, Bevel Siding, Moulding, New Brunswick Cedar Shingles, Lath, etc.

"QUALITY IS THE BEST POLICY"



Largest and Best Assorted Stock of Dry Spruce in Canada

The Best Practice

in dressing lumber is to run a narrow surfacer at the fastest feed. This is just what the 15 and 18 inch widths of the new WOODS NO. 59 SINGLE OR DOUBLE SURFACER are designed to do at a feed of 100 feet and upwards. This machine will do double the output of a wide slow feed machine, will do it better and with half the labor cost per thousand.

The patent Round Solid Back Cutter Head gives strength, stiffness and safety, is easily balanced and practically free from distortion due to bolt strains.

The Patent Truing Devices joint the knives while running and give absolute assurance of equal cutting by all.

The Money Maker

That is just Another Name for our

Lath Mill

YOU might just as well have a couple of of our mills in your establishment making money, instead of smoke, out of your refuse.

This mill, like our well known Original "Dunbar" Shingle Machine, is an ideal specimen of what careful workmanship, best materials and a knowledge of the requirements, can produce.

Deeds count more than words — that's why our Lath Mill and our Shingle Mill are first in their fields.

Berlin Quality Counts

94X Fast Feed Planer and Matcher

The 94x is not the highest priced matcher on the market. It has features which can not be found elsewhere, yet we are not asking as much as you can pay for other machines on the market to-day.

In the 94x you are offered the following features which are distinct advantages over all other flooring machines:

1. A matcher of proven capacity which will turn out perfect work at 150 to 200 feet per minute.
2. A matcher, the construction of which is such as to absolutely prevent the tearing out of knotty or cross-grained places, thereby raising the grades.
3. Cylinder and side head construction of proven capacity. And we furnish eight or twelve bitted side heads designed by ourselves.
4. A side head mechanism which cannot be choked down at 200 feet per minute.

And notwithstanding that you are offered the above as a fair representation of what you purchase, the actual cost in dollars and cents is less than some other machines offered you.

One 94x will actually turn out more well finished lumber than three ordinary matchers because it runs steadily hour after hour and not several hours with tie-ups for break downs and time losses for sharpening knives.

A short time ago a firm put in *one 94x to do the work of four light machines.* Consider the saving in labor. The expense of maintaining the 94 x is also less because there are fewer parts to give trouble.

We would like to show you where the 94x matchers are going in. A circular will give you all the details and show you why the machine is making such a success.

The Shimer Cutter Heads

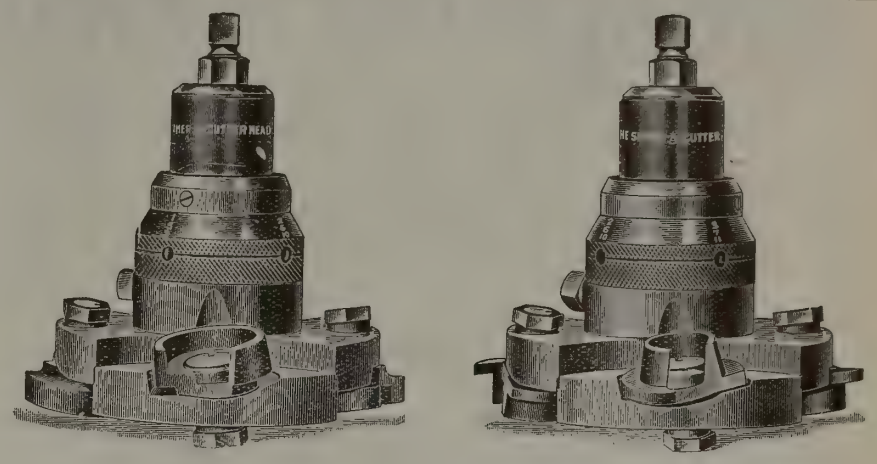
Economical Woodworking

To get the most economical results in your establishment you should put in the hands of your men the best tools—tools that will save the men's time in getting started on a job—that will do the work without causing delay and expense—that can easily be expanded or contracted for the next patterns to be run.

The Shimer Cutter Heads have been keeping pace with the growing needs of the woodworker, whose success depends upon the output of his mill and his freedom from "Fit and Try" worries. The special features of these tools consist of little details designed to make easy, convenient, methodical use of every matcher, moulder or tenoner and assist the operator in the economical use of such machines.

You may make Flooring with almost any of the heads that are gratuitously given with a matcher or moulder, but when you want something for economy—real economy, mind you—then get a Shimer Cutter Head. Our aim has been to make it so good—so convenient—so cheap—that you can't afford to make flooring with any other.

Don't Burn Your Moulding



Blackened edges so often found in hardwood Mouldings indicate the use of inferior tools, which friction and burn because of their failure to have proper clearance. The Shimer Reversible and Non-Reversible Cutters are made of the finest tool steel by experienced workmen. In design and construction they are superior to anything on the market. They cut well and retain their shape until worn out. Send us drawings or wood samples for estimates on special cutters. Many useful designs, with prices, are given in our catalogue.

Ship Lap Heads

to give you the best service must be of a kind that is always ready and to interchange with matcher and other Heads you may have fitted to your machine, thus avoiding a change of machine guides. This is one reason why the Shimer Ship Lap Heads are so generally used. The other reason is that they do work so satisfactorily that all who know their convenience take them in preference to others.

Price with 4 bits to each head, the set, 1½ in. thick $34.84
" " " " " 2½ in. thick 35.88

Thin Steel Knives

Advanced ideas referring to the planing and surfacing of lumber have developed into the use of the thin blades, made from high speed steel, which when properly tempered and treated, serve for one or two days of work on hard maple, oak or hickory.

These blades are known as our Bedee Knives and are recommended by users as the best that can be procured. For the benefit of those desiring to use this style of a knife we have facilities to furnish them in any length or thickness.

Write us about your requirements.

The Shimer Shear Cutting Cylinder

Made to fit any Planing and Matching Machine, Saves Power, Material and Labor, besides putting a smooth surface on the lumber. The cut is made with first one knife shearing the chip in one direction across the face of the board, and is followed by the next knife which shears the chip in the opposite direction. This distribution of the work reduces jars on the machine and belts, gives smooth action, and results in better work.

Box Board Matcher Heads

The Shimer Cutter Heads for Box Board matching will make a uniform cut and a close fit in every instance, as well after years of use as when the Bits are new. There is no friction upon the Bits, therefore no loss of power, no waste of material. The Bits can be expanded for thicker material, with corresponding change in the thickness of the tongue and groove.

Price for two Cutter Heads with 4 Bits each complete to match ⅝ to ½ inch, $29.15.

We also furnish when desired a Yoke Mandrel with self-oiling boxes, boxed f. o. b. Milton, Pa., for $11.05.

Bolts, Wrenches, etc.

We carry a full stock of supplies and can fill orders promptly for anything in our line, such as Wretches, Planer Head Bolts, Nuts, Washers, Gauges, Set Screws, Brass Washers for under Bits, etc.

Following are a few Net Prices of Tools which will be made after your measurements and guaranteed to fit your machine and to match your samples.

MATCHER HEADS—"Best of All"

Figs. 22 and 23 with concave bit seats, without Bits	$24.31
Figs. 202 and 203, with Expansion, $2.60 extra, each Head having 4 bit seats.

Branch of Milton, Pa.

Service and Satisfaction Come to the Users of

Hespeler Band Resaws

They Work even Better than They Look

Made in three sizes carrying saws 3, 4 and 5 inches wide. They embody all the newest conveniences and attachments for any kind of resawing within their capacity. They have ample power both on the blade and on the feed works for all important demands. These are some of their important features:

The Frame is cast in one piece, cored out hollow underneath, is heavily ribbed and perfectly rigid.

The Wheels are cast solid of ample strength, and are so designed as to give a large factor of safety when running at the tabulated speeds. The lower wheel (it will be noticed) is very heavy with a solid web in the centre. Faces and Edges of both wheels are accurately ground on their own journals and balanced as near perfectly true as human ingenuity will permit.

The Feed Works are driven by belt and changing from one feed to the other can be accomplished by simply turning a hand wheel one quarter of a turn. Each machine has five changes of feed.

The Rolls are driven by spur and bevel gears all cased in. All gears cut from the solid and as near noiseless as possible.

Six Feed Rolls carry the stock to the saws all of which are driven by gears cut from the solid. The right hand rolls are rigid in their boxes, but the left hand rolls have enough elasticity to grip all uneven stock.

The Self Centreing Attachment is so arranged that by one movement of handle the rigid roll becomes adjustable so that you can have a complete self-centreing machine, or by one movement of the handle the right hand roll becomes rigid again. This does away with the use of a wrench in making the machine self-centreing.

The Rolls will tilt from 0 to 1 inch in 6 inches to allow for the successfull sawing of clap board and general bevel work.

The Tension on the blade is accomplished by double acting knife balance levers with detachable weights.

The Guides have adjustable hardened steel back flat rollers with front and side blocks, adjustable or planed ways. The upper one is counterweighed and iustantly adjustable vertically to the width of the stock.

The Saws runs within 1 inch of the centre of the back roll, cutting the stock while it is firmly held. When doing bevel sawing the feed works can be drawn back by a lever to prevent the saw striking the rolls and the safety lock is so arranged that the rolls can not be tilted until the feed works are drawn back from the saw.

Cleaners are provided on both wheels. A packing box is attached to the lower wheel guard, which should be kept filled with oily waste to soften the gum which often collects.

We are the sole Canadian licensees for some of the most approved types of American Wood Tools. We pay for and secure the patterns and designs and run no risks of mistakes.

Prompt shipments of complete outfits for planing mills, sash and door factories, carriage, wagon, piano and furniture factories made to all parts of Canada. We have both the C. P. R. and G. T. R. at our doorway, which insures **rapid delivery** to the far East or the far West.

The

Gordon Hollow Blast Grate

The Heaviest, Most Durable and Most Efficient Blast Grate on the Market

Pays for Itself in One Week

"The Gordon Hollow Blast Grate saved us enough on FUEL the FIRST WEEK to PAY FOR ITSELF, BESIDES increasing the cut of our mill by ONE-HALF."—Kingsbury & Henshaw, Antigo, Wis.

Adds from 25 to 50% to the Efficiency of a Boiler

"We installed your Hollow Blast Grate System in connection with our saw mill boilers several months ago. We were VERY SHORT OF STEAM at that time, and were undertaking to burn considerable WET CYPRESS DUST from our shingle mill. After installing the Hollow Blast Grate System we HAD NO FURTHER TROUBLE with our boilers' steaming. We are getting AT LEAST 20% MORE STEAM and could possibly push them to 25% MORE. We consider the Gordon Hollow Blast Grate one of the BEST INVESTMENTS we ever made."—Aycock Lumber Co., Aycock, Fla.

"The blast grates you sold me at Sylvania, O., INCREASED OUR STEAMING CAPACITY 50%, and enabled us to make plenty of steam in the winter time from FROZEN SAWDUST."—R. C. Gillett, Waverly, Va.

Gives as good results with wet, green or frozen saw-dust as a Draft Grate gives with dry wood

"We have used your Hollow Blast Grates CONTINUOUSLY since they were installed, which we believe was about FIFTEEN YEARS AGO (The actual period was 16 YRS. 8 MOS. G H. B. G. Co.) Prior to that time we were compelled to SEASON our fuel—the best of WOOD—to have a grade that would make us sufficient steam to keep our plant running, and EVEN THEN were compelled to stop at times during working hours to raise steam. After putting in your grates we make a sufficient amount of steam WITHOUT TROUBLE, using GREEN ELM DUST. The grates are apparently in AS GOOD SHAPE AS WHEN INSTALLED, and we consider them A WONDERFUL INVENTION."—G. V. Griffith & Son, Albany, Ind.

Saves Labor in Firing

"Your grates have effected a saving of about ONE-HALF in LABOR in the fire-room, and while using nothing but SAWDUST and GREEN MILL CLIPPINGS, have given us FULLY 33⅓ PER CENT. HOTTER FIRES."—The Ohio Wheel Co., Delphos, O.

Is Practically Indestructible

"I used your Hollow Blast Grates at stave mills at different points for some TWENTY YEARS, and they are JUST AS GOOD AS WHEN PUT IN, and I can burn any WET BARK AND REFUSE that otherwise COULDN'T BE USED AT ALL. They are the cheapest grate one can use, for they NEVER BURN OUT."—S. P. Shelly, Holgate, O.

The men who have made the Gordon Hollow Blast Grate what it is—our president, our secretary and treasurer, our superintendent, our foreman and our designer—have all been identified with the business since the company was organized, while our vice-president has been with us for fifteen years.

Our services are, therefore, those of experts.

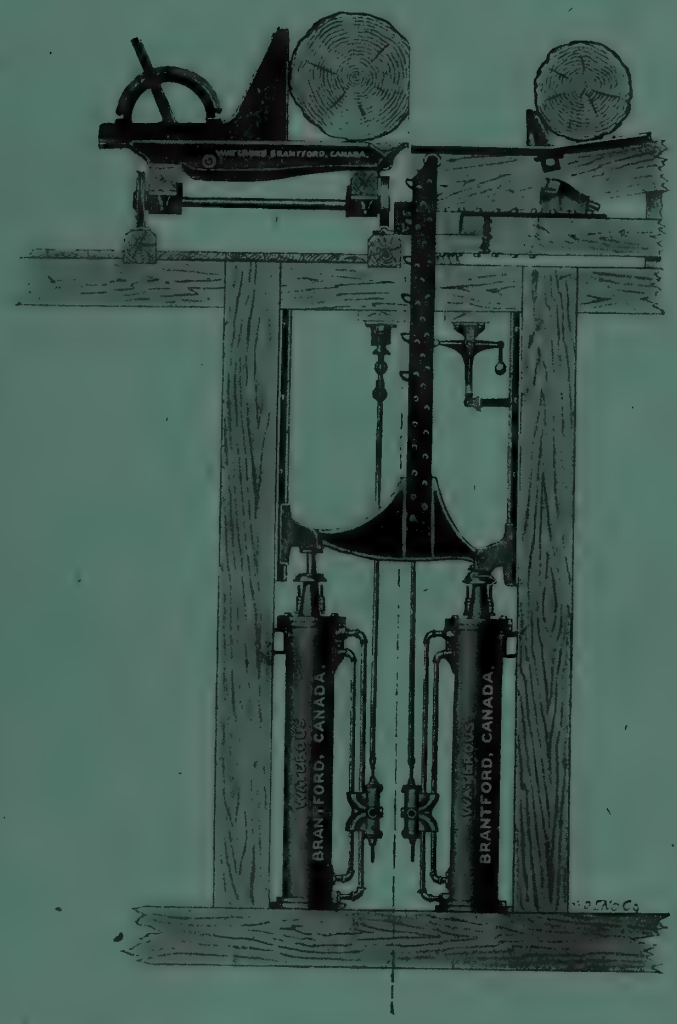
Steam Actuated



Single and Double

Log Deck Machinery

Our Stationary Niggers are built single and double cylinder, in sizes to fill the requirements of any mill.

The Cylinders are provided with steam ports instead of outside pipes, thereby avoiding leaky joints and loss of steam. They are made 8 in. and 10 in. in diameter, cast especially strong where necessary.

Valve Gearing and Valves of a newer and stronger design. Steam is admitted through a check valve, which regulates the exhaust to provide a steam cushion to the piston at both ends of the cylinder. This eliminates any danger of the cylinder heads being forced out by the piston. The valves operate easily and quickly by one lever only. Valve travel is short and the same distance in each cylinder.

Guide Rods of forged steel shafting, same diameter as piston rods, are carried with one end attached to the upper cylinder head to make the machine more rigid and self contained.

Cross Heads, extra heavy, bored to fit piston rods and guide bars, and provided with patent improved oiling arrangement.

Nigger Bars of cast and wrought steel, wider and stronger than the old style bars, fitted with forged steel teeth, hinged to drop back out of the way as the bar recedes.

New Spring Cushion Floor Plate, extra heavy, constructed to take up shock of the bar on the spring cushioned end pieces. All Cylinders and Valves are **thoroughly tested** before shipment.

NOTE: The accompanying cut has been used merely to show the general arrangement of our Stationary Nigger, as the cuts for our new Nigger, described above, are still at the Engravers.

We Manufacture a Complete Line of

PETERBORO ONTARIO

The Hamilton Steam Tension Band Mill

The application of steam to the band mill is being followed by the same good results that accompanied the introduction of steam operated log handling machinery and steam feeds.

Our band mill has two steam cylinders, one for operating the top wheel and one to raise and lower the upper guide. Being steam controlled, these parts *must* move quicker than same parts operated by any purely mechanical device, such as frictions, gears, levers, screws, etc.

This means time saved to you every day—time for you to use in sawing, or, in other words, more lumber at the same operating cost.

The mill is simply and strongly built, and any good sawyer can run it successfully.

If you will notice how the top wheel is supported, you will see that we have entirely eliminated vibration.

There are many other good features about this mill, and we think you will be interested in them. Shall we send you a catalogue?

B. C. Agents: A. R. Williams Machinery Co., Vancouver, B. C.

Reliable Veterinary Remedies

No logging outfit is complete without a supply of reliable veterinary remedies. Getting the wrong kind means the loss of the use of your horse when time is valuable.

JOHNSON'S VETERINARY REMEDIES
are guaranteed never to fail when used as directed. You get your money back if they ever do.
They are

Johnson's Horse Liniment No. 1.
A penetrating Alcoholic Liniment. Put up in one gallon jugs, with full directions, per imperial gallon $4.50

Johnson's Horse Liniment No. 2.
A combination of the best oils used as liniments, imperial gallon $3.00

Johnson's Horse Colic Remedy.
A sure and speedy cure for colic Imperial gallon $5.00

Johnson's Veterinary Healing Ointment.
Positively the best all-round healing ointment made. In use by the largest owners of horse flesh in Canada.
Put up in 2 lb. tins, each $2.25 or in ¼ lb. tins, per doz. $3.50

Johnson's Condition Powders. (Concentrated).
Put up in bulk, per lb....30c.

These goods being put up in bulk are more economical than others, as cost of bottling, etc., is saved.

CAMP REMEDIES.
In addition to our Veterinary Remedies we make a line of medicines for lumbermen, including a strong, penetrating liniment, healing ointment, cholera cure, liver pills, cough syrup, in fact anything in the form of Camp Drug Supplies. We know that there are no better remedies made than those we offer. There may be others nearly as good, but they lack our guarantee. Satisfaction or money back. A trade discount of 10 per cent. allowed off all orders amounting to $100. (Send postal for printed matter.)

Head Office and Works - - SEAFORTH, ONTARIO

Furniture manufacturers everywhere take off their hats to the improved Cabinet Planer of the Whitney Type

That the Whitney type of cabinet planer is **the acknowledged leader in its class,** hundreds of successful manufacturers of fine woodwork in America and Europe will gladly testify.

We are building this type machine on the advice of some of the largest furniture manufacturers in the United States, one especially whose advice that "irrespective of all other machines manufactured and offered on the American market, this machine stood in a class by itself, and that their policy was to buy this class of machinery and forget all about the price as soon as possible as a good machine was cheaper at any price and Furniture Factories by consulting their own interests could not afford to use anything else."

The improved cabinet planers of the Whitney type which we are building mark the extreme limit so far reached in economy, durability, regulation and smooth running. These machines are made in three sizes, 30, 36 and 45 inches in width. They are at all times in stock or under construction, and can usually be shipped **within one week from receipt of order.**

Among recent sales made was one 36 in. cabinet planer to Tudhope Carriage Co., Orillia, one 36in. cabinet planer to The Spiesz Furniture Co., Hanover, and one 36 in. cabinet planer to The Hanover Specialty Company, Hanover.

We also manufacture a standard line of Surface Planers, Planers and Matchers, Combined Planers, Matchers and Moulders, Moulders, Buzz Planers, or Jointers, Mortisers, Tenon Machines, Sash and Door Clamps, Shapers, Band Resaws, Self-Feed Rip Saws, Saw Tables, Band Saws, Borers, Sanders, Etc.

Disston Bandsaws

The First Bandsawing Machine in America was installed by Disston.

Bandsaws exhibited by Disston at the Centennial were looked upon as an extraordinary achievement in mechan cs. But they were scarcely more than toys when compared with the great Disston Works to-day.

"Always First" is the Disston Policy.

Many efforts have been made to equal a Disston Bandsaw — and the Disston Bandsaw is still in first place.

It gives better and longer service than any other bandsaws made.

It stands up under the hardest work; saves time; reduces expenses.

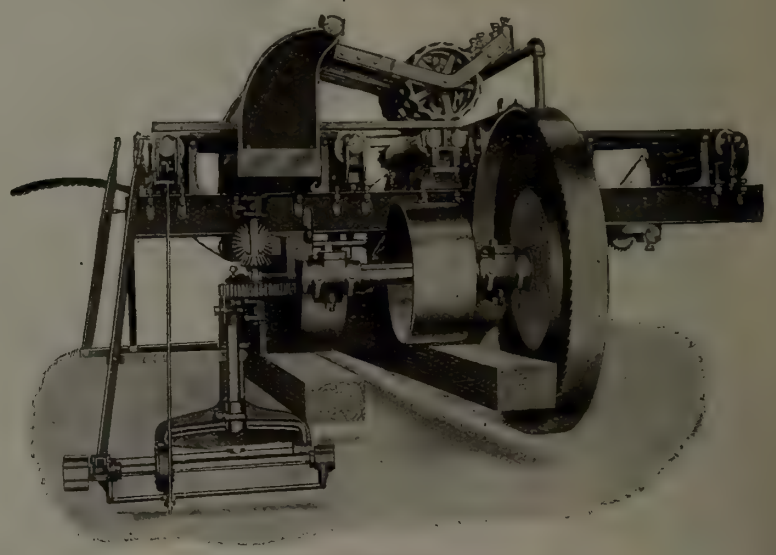
WIRE ROPE

Why experiment continually with wire rope you know is not up to "Dominion" quality—quality that means better material, better construction and better service?

MATERIAL—All our ropes are made from the best quality of imported wire, specially drawn to our own specification. Each coil is carefully tested for its tensile strength, torsion, flaxion and elastic limit.

CONSTRUCTION—Every step in the construction of our wire ropes is carefully watched over by experts. Our many years experience in manufacturing wire ropes enables us to offer the best to be had anywhere.



SERVICE—Every length of "Dominion Rope" gives satisfaction, because it is serviceable and dependable.

All lengths and sizes carried in stock for immediate shipment

TERMS OF SUBSCRIPTION:
Canada, United States and Great Britain, $2.00 per year, in advance; other foreign countries embraced in the General Postal Union, $3.00.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For Manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Vol. 30 Toronto, February 1, 1910 No. 3

Lumber Trade Conditions in 1909

The close of the year 1909 found the lumber situation in Canada in a far more satisfactory condition than it was in at the beginning of the year. In practically every regard the lumber manufacturers and dealers of Canada have reason to be pleased with the events of the past year. A period of financial depression has been safely passed. Several elements of disturbance have been dispelled and normal conditions have been attained once more, so that the boards for 1910 are well cleared for active and profitable trade. There is to-day nothing in the form of a cloud upon the horizon of the lumber manufacturer of Canada, save, perhaps, the uncertainty which still remains in connection with the United States tariff. This uncertainty will, in all probability, be settled before the summer season has commenced. Even if the worst should come to the worst, and a maximum tariff should be put in force against Canadian products entering the United States, the prosperous conditions of Canadian trade in general will enable us to deal with such a situation better than we could under the conditions which prevailed in 1908 and 1909.

Of all the elements of disturbance which retarded the return of profitable trade during the past year, the tariff uncertainty was the most important. Its effects are widespread. Until the tariff was settled by the passage of the Tariff Act of August 5th; the trade between Canada and the United States was almost at a standstill. Immediately upon the passage of the Act, however, the trade began to improve and the improvement continued steadily throughout the rest of the year. It is difficult to say whether the volume of business was increased by the lower tariff on rough lumber. No doubt it is now easier for Canadian lumber to find its way into United States markets, but whether the volume of trade will be materially increased remains to be seen.

There is no doubt, however, about the effect of the increase in the duty upon shingles. The United States demand for Canadian shingles has been greatly reduced by this change. Fortunately this has not affected British Columbia shingle manufacturers to any great extent because the increase in the demand for shingles from the Canadian prairies has made up for the decrease in the United States demand. It is even thought that with the return of prosperity to the United States, shingle operators and their employees will eat up the advance in the duty and again enable British Columbia shingles to enter the United States markets. In eastern Canada the result of the increase in the duty upon shingles was more marked and prices were considerably depressed. Whether time will permit Canadian manufacturers to adapt themselves to the change and to sell extensively in the eastern United States markets also remains to be seen. The indications at present are not favorable.

As to the maximum tariff of the United States and the possibility of its being imposed upon Canadian products, varying opinions are being expressed. The public statements made by Prsident Taft and Sir Wilfrid Laurier upon the subject, however, give the best ground for a feeling of assurance that such a course is only of the remotest possibility. During the tariff campaign heated opinions upon both sides were uttered, which made it look for a time as though the Canadian trade was seriously menaced by a possible maximum tariff. Now that the tariff clouds have cleared away there appears to be little excuse for anxiety.

Outside of the tariff issue in the United States the greatest element of a disturbing nature, so far as eastern Canada is concerned, has been the stagnation in trade caused by the elections in Great Britain. Fortunately, however, the improvement in the United States demand came at a time when the election disturbance in Great Britain was becoming keen and the effect of the elections upon prices and trade in Canada has not been of serious importance. In fact, one of the important developments of the lumber trade during 1909 was the increased tendency of the manufacturer in eastern Canada to cater to the United States markets instead of those of Great Britain. Better prices were secured in the United States and a strong movement developed in the direction of increased trade with that country. English dealers have to some extent expressed indifference to this situation, claiming to be able to draw supplies from Continental sources when Canadian supplies run short. One result of the increased demand for Canadian lumber in the United States was a gradual but material increase in the prices obtained for the English spruce deals. At the beginning of the year they were quoted at St. John on the usual specifications at $13.50 to $13.75. At the close of the year the price was $14.25 to $14.75. The pine deal situation strengthened considerably during the year. At the beginning of 1909 contracts made for the sale of the season's cut were generally at the prices which had prevailed during the previous year, but a small decline was made in the prices of 1sts. At the beginning of 1910 contracts are reported to have been made at prices similar to those of last year, with an advance of 5 per cent. for 1sts and 2nds.

The season of 1909 will be remembered more than anything else perhaps as a season of housecleaning. Manufacturers realized early in the year that the most important thing was to clean up stocks as thoroughly as possible and to avoid the accumulation of new stock. The lumber cut of 1908 had been smaller than that of 1907, and it was thought at first that 1909 would show a material increase. But the manufacturers took a conservative view of the situation and the result was that the cut of 1909 was only slightly larger than that of 1908. Practically speaking it was the same. With the improved condition which prevailed in trade, the manufacturers were able without freat difficulty to clear up their stocks very satisfactorily. This was not accomplished until the year was well advanced, but with the fall, after the crops had been harvested, the demand, especially for the upper grades of white pine, reached large dimensions. The improvement also spread throughout the lower grades, and manufacturers were able to reach the end of the year with comparatively light stocks in all grades. They are, therefore, in an excellent condition to approach the season of 1910.

More particularly is the above state of affairs noticable in British Columbia, where stocks have been lowered to so great an extent that the large firms were obliged to call in their travellers during the end of December and to refuse further orders. This had been preceded by an

advance in prices and it was followed shortly afterwards by a further advance. The farmers on the prairies had one of the most successful years on record during 1909 and their demand for lumber was responsible for this sudden improvement in the lumber trade. The indications are that during 1910 the demand from the prairies will be even greater than during the autumn of 1909, and that the manufacturers of British Columbia will experience the best year's trade they have ever enjoyed.

As an indication of the lumber markets in Canada at the beginning of the year 1909 and at the end, the following price variations are interesting. One-inch No. 1 pine cuts and better opened the year at Toronto at $40 to $44, and closed at $44 to $48. One and a half inch No. 2 pine cuts and better at Toronto, opened at $38 to $45 and closed at $46 to $48. One by ten box and common at Toronto, opened at $24 to $26 and closed at $24 to $25. One-inch dead cull sidings at Toronto, opened at $13.50 to $14 and closed at $12.50 to $13. Spruce mill run opened at Toronto at $17.50 to $19 and closed at $19 to $20. Hemlock, 1x4 to 6-inch opened at $16.50 to $18 and closed at $14 to $15. The hardwood list strengthened fairly generally, the following being opening and closing prices for the year at Toronto: White ash, 1's and 2's, $50 to $60, and $55; birch, common and better, 1-inch, $23 to $24. and $26; basswood, c. and b, 1-inch, $23 to $25, and $26; rock elm, c. and b, 1-inch, $28 to $30, and $35; hard maple, 4-inch x 4-inch, 10-16 feet, $30 and $40; red oak, plain, 1's and 2's, 1-inch, $44 to $47, and $52; white oak, plain, 1's and 2's, 1-inch, $44 to $47, and $52; quartered oak, 1's and 2's, 1-inch, $77 to $80, and $83. At Ottawa pine good sidings opened the year at $40 to $44 for 1-inch x 7-inch and up, and closed the year at $45 to $48. Lath, No. 1 white pine, 1⅜-inch, opened at $3 to $3.50 and closed at $3.75 to $4. 32-inch lath opened at $1.50 to $2 and closed at $1 to $1.50. At Winnipeg, No. 1 pine R or S, 1S and 1E, opened at $16.50 and closed at $19. Mountain stock, 2-inch x 4-inch—12, opened at $19 and closed at $22.50. B. C. fir, S, 1S and E, 2x4, 6—8, 8—16, opened at $19.50 and closed at $22.50. Lath, mixed white and red pine, opened at $3 and closed at $4. Three X B. C. cedar shingles opened at $3.10 and closed at $2.60 at Winnipeg. Two X opened at $2.25 and closed at $2. Generally speaking, therefore, throughout the whole country prices for good lumber advanced gradually from the beginning to the end of the year and the low grades, although fairly active, were only steady or else declined gradually, while the price of shingles dropped considerably.

The total exports of products of the forest from Canada during the twelve months ending with November 31, 1909, were valued at $46,009,717. In 1908 the value for the corresponding period was $38,961,835, and in 1907 $45,445,211. 1909, therefore, was much better than 1908, and was even slightly better than 1907. At the beginning of 1910 lumber manufacturers have everything to encourage them, with the single exception of a dull market in Great Britain. With the political unrest which exists in the old country, it is impossible to say how long this condition will last. Otherwise in the old country conditions are shaping themselves for better lumber trade conditions. There is good reason, therefore, taking everything into consideration, for Canadian lumber manufacturers and dealers to expect confidently a record year in 1910.

Hon. Mr. Sifton's Views upon Lumbering and Forestry

The First Annual Meeting of the Commission of Conservation appointed by the Dominion Government, was held at the Carnegie Library, Ottawa, from January 18th to 21st, and proved to be exceptionally interesting. The most important speech delivered at the meeting was the inaugural address by the Chairman, Hon. Clifford Sifton. He referred with much detail to the various natural resources of Canada, and dealt with the history of the conservation movement throughout the various countries of the world, which have been active in this regard.

Dealing with the matter of forest resources, Hon. Mr. Sifton said: "It is evident from an examination of the publications relating to the work in the United States, that many of the lines of policy which have resulted disastrously there have not been followed at all in Canada. As a fact, the policy followed in Canada in some cases is that which the United States are now trying to reach. A notable case of this kind is the disposition of the timber lands. In the United States the policy has been to sell the timber lands outright, which removes the land and timber from Government regulations. Forest experts deplore the fact that the great bulk of the timber in the United States is now privately owned and that the local taxation, based upon totally uneconomic principles, is made so heavy that it becomes an incentive to the timber owners to clear off the forest and realize on it as quickly as possible by the most destructive methods.

"In Canada, on the contrary, the amount of timber land privately owned is comparatively trifling. Only, I think, in the Province of Quebec is it a factor. Our Governments, Federal and Provincial, have followed the policy of leasing the right to cut timber under regualtions which permit the most absolute control by the Governments concerned and preserve the right to alter the regulations from time to time. There is, therefore, in the State-owned timber lands of Canada, Provincial and Dominion, a free field available for the adoption of improved regulations."

Referring to forestry matters, Hon. Mr. Clifford Sifton reviewed the growth of the forestry movement in Canada, and said that in this regard the work was only beginning. Continuing he said: "It is certain, that the quantity of merchantable timber in Canada outside of British Columbia is much less than was popularly suppossed up to a short time ago. It will be one of our first duties to thoroughly sift and supplement the presently available statistics and prepare a full and reliable statement.

"A few facts stand out very clearly. Under the policy adopted by our Governments, Provincial and Dominion, the timber lands leased to operators are still subject to the fullest regulation by the Governments concerned. The field is open, therefore, for improvement in regulations. The generally admitted evils in the present methods of lumbering are:—(a) Destruction of young growths. (b) Cutting of trees not sufficiently matured. (c) Leaving of inflammable refuse and debris upon the ground.

"The great foe of the forest is fire. A good deal has been done in the way of fire protection, but much more requires to be done. Notwithstanding everything that has been said and written on the subject. and the measures of prevention taken, it remains a fact that the devastation of forests by fire is going on at a rate that is simply appalling when one considers the ultimate and not-far-distant result. It is doubtful if one in ten thousand persons realizes the actual meaning of even the partial and fragmentary information which we have on this subject.

"Tree-planting in the west is important, the renewing of the white pine forest of Ontario is important, the pulpwood question is important. many other phases of the question are important, but the all-essential thing in regard to the question of the forests is to get the community wakened up to the idea that an absolutely new departure must be made and at any cost the destruction of forests by fire be stopped."

Hon. Mr. Sifton then dealt with the importance of the forests as a means of regulating the flow of waters, and referred also to the great forest fire of 1871 which devastated the country between Sudbury and Port Arthur. Continuing, he said:—

"There is nothing more absolutely certain in nature than that, unless steps are taken to protect it, the whole territory mentioned. with exception of the few and small tracts fit for agriculture, and occupied as such, and small settlements along the railway, will be completely denuded, not only of trees, but of the soil, within the lifetime of men now living. No one can tell the physicial effect on climate of such a catastrophe, but, apart from that, the mind shrinks from the very idea of such a rocky waste in the heart of the country. My information is to the effect that the fires are almost wholly caused by railway locomotives. Fires occuring from any other causes can be pretty effectually prevented by stringent laws and effective enforcement by the Province, but Dominion railways must be dealt with by Federal legislation. The laws of Canada relating to fires caused by railway engines certainly require amendment. Upon what principle do we permit railways to spread abroad destruction of public and private property? The time may have been when the necessities of transportation and the

comparative poverty of the railway companies made it impracticable to enforce stringent laws, but that time has surely passed, and I have no doubt the great companies will themselves readily realize their duty in this respect.

"This question of prevention of fires arising from railways is a very large and difficult subject, but we must be prepared to face large and difficult subjects if we desire to accomplish important results. Throughout the whole of the district which I have mentioned the land immediately adjoining the railway track is covered with inflammable material, which in dry weather will generate fire from the smallest spark. As conditions exist, frequent fires are inevitable. The condition is one for which a remedy ought to be insisted upon.

"With proper protection from railway fires, the Government of Ontario could make a reserve of the whole district, place it in charge of a warden and staff who would protect it from fire at a comparatively slight cost, and arrest the course of destruction which is going on. Give it the slightest chance, and the land will reforest itself. Even now there are extensive growths of young trees along the railway line, but, unfortunately, under existing conditions, they are doomed to destruction. Planting might be easily and economically carried on to a considerable extent, but without that throughout the greater extent of the territory reforestation will be effected by nature. Here is the greatest opportunity that any Government ever had to conduct an extensive operation in forestry—at trifling expense—and with certainty of valuable returns. The territory would be a mine of wealth.

"Railway ties are every year becoming more scarce and difficult to obtain. I am told that they are worth now from fifty to sixty cents per tie. Great quantities of ties are required now, and the demand is steadily growing. In the United States an important railway company has actually bought land and commenced to plant trees, in order to supply ties for the future. The cut-over and burned-over Crown Lands of Ontario and Quebec would, in time to come, if properly protected and fostered, supply ties for the whole of Canada, from the New Brunswick line to Regina, and the Governments of those Provinces would draw revenues from them which would be counted in millions.

"Concluding, Mr. Sifton called attention to the need for organic laws that when capital from the United States and elsewhere comes in the people may not be deprived of the control of natural resources, nor of their fair share of the wealth produced from them."

A number of other interesting papers were read at the meeting, among them being one upon "Forestry" by Dr. B. E. Fernow, Dean of the Faculty of Forestry, of the University of Toronto. Hon. Jules Allard, minister of Lands and Forests, of Quebec spoke upon "Forestry and Water Powers in Quebec." Dr. H. T. Gussow, Botanist of the Central Experimental Farm, Ottawa, delivered an address upon "Diseases of Forest Trees and Dr. C. Gordon Hewitt, Entomologist of the Central Experimental Farm, Ottawa, spoke upon "Insects Destructive to Canadian Forests." Among the standing committees appointed, was one upon "Forests" consisting of Senator W. C. Edwards, Ottawa; Frank Davison, Bridgewater, N.S.; W. B. Snowball, Chatham, N.B.; John Hendry, Vancouver, B.C.; Manager J. C. K. Laflamme, of Laval University; Hon. Frank Oliver, Ottawa, and Dr. B. E. Fernow, Toronto.

The commission will meet again next June in a place to be decided by the chairman and Sir Wilfrid Laurier.

Lumber Freight Difficulties Demand a Remedy

In spite of the assistance of the railway commission and the watchfullness of a few of the manufacturers of Canada, it seems as though there will never be an end to the difficulties which arise in connection with the carriage of freight by railways. Lumber manufacturers and dealers are dependent, absolutely upon the railways, for the transaction of their business. Good railway facilities, and a spirit of reasonable consideration for the shippers, on the part of the railway officials, are all-important. It would be useless to say that these conditions exist today. Notwithstanding the repeated assurances of the railways, that they take every care to serve the shippers with the utmost consideration, the fact remains, that concerns which ship in large quantities have continually to submit to losses which are not a reasonable factor in trade. In the matters of overweight and failure, to make allowance as provided in the tariffs for variations in tare of cars, absorption of moisture, accumulation of ice and snow, etc., lumber companies are subject to a regular and unjust tax.

Retail dealers throughout the country do not feel the tax so greatly as the large producers and wholesalers. They have long ago reduced their business to a basis which makes allowance for this tax and the actual work of making complaint, is assumed by the wholesalers and producers. The retailers, therefore, are somewhat indifferent to the situation. If the large firms were to cease paying attention to the matter, the retailers and consumers would be subject to this improper charge, and the railways would secure profits to which they are not entitled, in a greater extent even than they secure them at present.

The tendency of all natural products to increase in price of late years, has been a great anxiety to consumers and an unfair tax by the railroads, should not be allowed to add to the burden of living. Wholesalers and manufacturers of lumber, have been fighting against the overcharge for years and years, without any permanent success. They need the co-operation of every one in the lumber business. In many cases the overcharges are refunded, but not until a large, and uncalled for expense has been entailed. If the railway companies will not become reasonable in this matter of their own free will, the railway commission should see to it that they are compelled to do so. The Canadian Lumberman's Association, and the Canadian Manufacturers' Association, if backed by the trade in general, could take the matter before the railway commissioners with some prospect of success.

It is not as though the railway companies did not understand the situation thoroughly. They not only understand it, but they make a show of being anxious to avoid the overcharges. The Grand Trunk railway company's special freight tariff for the weighing of carload traffic, and for allowances for track scale weights, states that an allowance of 500 pounds, to cover the variation in tare of cars, absorption of moisture, accumulation of ice and snow, etc., is to be made on each box car of lumber from January 1st to December 31st, and on each flat car from May 1st to November 30th. From December 1st to April 30th, an allowance of 1,000 pounds is to be made on flat cars. In hundreds of cases this allowance is not made when the bill is made out, and shippers are obliged to make a claim for it in order to save the overcharge. The making of this claim is a heavy burden for which there is no excuse.

As a safeguard to prevent the railway companies from unreasonable inconvenience, by shippers making unfounded claims, a charge of 50 cents is made for reweighing when the consignees desire it, unless the weight is found to be inaccurate by 500 pounds or more. The burden of proof is placed upon the shippers, and the railway companies take ample advantage of this by failing to make the proper allowance. This is not the case in a few instances only. In the office of any large wholesaler one may find claims by the score, for allowances which have not been made. In one instance about 50 claims which were grouped together in one complaint, had an average overcharge of $2 per car, resulting from failure to make alowance, or from actual overweight. In the course of a year this overcharge amounts to a large sum which belongs to the shippers and, to which the railways have no right. The weighing of freight is a matter which must necessarily be superintended by the railway companies. The occurrence of mistakes is due to their work, and if the burden of proof has to be borne by anyone, it should be by the railways. It is not right that the shipper should have to pay the piper at both ends.

This is only one of a number of difficulties which arise in connection with shipments of lumber. It would be interesting to have the experiences, or opinions of shippers of lumber upon this subject. A general discussion of the matter would probably bring to light other features of the case, which involves just as serious a loss. Those who have reason to feel the unfairness of this tax, would do themselves and the lumber trade a service by sending their ideas to the "Canada Lumberman and Woodworker."

Statistics of the Lumber Trade in Ontario for 1909

Business Greatly Improved—Output of Lumber Increased by Forty Million Feet Over 1908—Ottawa Valley Output Increased by Seventeen Million Feet

The lumber trade in Ontario during the year 1909 has been on the whole very satisfactory. The season opened up with prices generally at a low ebb, and the demand dull, but even at the beginning of the year there were indications of more prosperous business when the spring trade opened up. This materialized to some extent, but comparatively speaking trade was dull until the crops were well assured. Towards the end of the summer the demand for lumber made itself felt from all quarters and especially was this the case when the Tariff Act of the United States was passed on August 5th, and the uncertainty which had prevailed so long in regard to the market was removed. What with the good crop and the improved demand from the United States the good ends of lumber throughout Ontario were rapidly disposed of, and a large amount of the accumulations of the lower grades was also sold. At the conclusion of the year, therefore, the lumbermen of Ontario found themselves with their stocks well depleted and with the prospect of an excellent year during 1910. Practically speaking, this is the whole story of the year's business. The improvement came gradually, but surely and pretty much as was expected. Hemlock was the only wood to drag. Early in the season the supply on the market became too heavy and until it was worked off, prices were depressed. A recovery commenced however, in the fall and by the end of the year Hemlock was in fairly good shape.

The mills in Ontario were fairly busy all summer. They had ample supplies all along to operate upon and the result was, that compared with 1908, the cut was considerably increased. At northern Ontario points including the district west, as far as the Soo and covering the Georgian Bay and Trent Valley districts the cut amounted to about 880,000,000, which is an increase of some 43,000,000 over last year's cut. The reports published in this issue of the "Canada Lumberman" show a much larger cut for the season of 1908 than was shown in the reports published last year. This is accounted for by the fact that many more mills reported this year than last and as the 1908 table published in this issue gives statistics which have been secured this year, the proper comparison shows about 837,083,960 in 1908 and 880,128,000 in 1909. These same mills reporting upon their cut of lath for 1909 give a total of 226,368,000 pieces, whereas the same mills reporting for 1908 give only 220,085,025. The shingle production as returned by the same mills shows for 1909, 54,257,000 against 46,003,000 in 1908.

The outlook for the sason of 1910 in Ontario is well illustrated by the reports which have been made to the "Canada Lumberman" healthy looking at present with a tendency to advance in price $1 per thousand."

"We have orders for 1910 to the extent of $100,000 on hand now."

"Considering the prices going for logs at present the indication is that there will be a rise in lumber for 1910."

"We found hardwoods in good demand this year, especially birch, ash and elm. Hemlock was very slow but inquiries are numerous and lock was very slow but inquiries are numerous and healthy looking at present with a tendency to advance in price $1 per thousand."

"We have already inquiries for our 1910 stock and anticipate a better year than 1909 if the labor problem does not come too much to the fore."

"Better conditions prevailed and the outlook for the coming season is good. We are selling lumber now for shipment on the opening of navigation."

"The outlook at present for 1910 business is considerably better than it was a year ago. This opinion is based upon inquiries received so far this year as compared with January 1909. We think hardwood lumber will be good in 1910 as stocks are nearly all cleaned up."

"We are all going to have more than we can do the coming year. It will not be a question of orders but a question to produce the stock to fill orders."

"The outlook for good lumber is better than last year and until there is an improvement in the price of southern lumber we do not look for any advance in the lower grades in which we will do well to keep the prices we have now."

"The outlook for 1910 with hardwood will be good, hemlock poor. We do not expect any advance in prices."

"There is certain to be an overproduction of pine this year but trade should be normal throughout the year. The better grades of lumber should hold out, but culls are likely to be sacrificed. Hemlock is slow, spruce, is in fair demand and laths will be good."

"The cut in the woods along the north shore will probably be 75 per cent or more above last year (1908 and 1909). It appears to us that there will be a general advance in all grades of lumber during the coming season. Stocks are low, labor in the camps is high and there is quite a demand from the United States points for pine and hemlock lumber."

"We are preparing for an extra large cut for 1910."

"We are getting more inquiries, are making sales and are looking for steady improvement."

"We manufacture principally hemlock. The market for hemlock has been dull for the past two seasons. At present we have a number of inquiries and look for better trade the coming season."

"Unless something unforseen happens we look for a good year."

"The price of hemlock is going up. Logs and labor cost just as much. There is more hemlock being used than in 1907. If mill men want the same price for hemlock as they received in 1907 they have only to ask for it. If they don't ask it they won't get it."

The following table shows the production of lumber at northern Ontario points exclusive of the Ottawa Valley.

Total	837,083,960	880,128,000

The log cut of the Province of Ontario during the season of 1908 and 9, was less than that of 1907 and 8, by about 166,000,000 feet. The total according to the returns made to the Ontario Department of Lands, Forests and Mines, for the season of 1907 and 8, was 725,411,944 feet. For the season of 1908 and 9, it is estimated that the returns will show a total log cut of 559,628,605 feet. Figures for the season of 1909 and 10, are not yet available, but it is expected that they will show a

The Ottawa Valley Production

considerable increase over those of the previous season. In this connection it is interesting to note the average cut of pine in former years. From 1867 to 1908 the average annual cut was 578,000,000 feet. From 1896 to the end of 1907 the average annual cut was 673,000,000 feet. For the years 1907 and 1908 the average annual cut was 710,000,000 feet.

Mr. Jos. B. Picard, lumber merchant, Quebec, has left for the Western States, visiting Denver, Salt Lake City, and Los Angeles, where he intends to stay for three or four months, returning via Seattle, Vancouver and the Canadian North-west.

Ottawa Valley lumber mills had a hard fight against high water in the early spring and but for the favorable season which followed, the production in 1909 would have fallen far below the usual quantity. As it was, the amount was about 500,000,000 feet. The most notable contrast with the previous year is afforded by the Hawkesbury Lumber Co., whose output jumped from 33,000,000 in 1908 to 56,000,000 in 1909. The Hawkesbury mills were idle for a long time, towards the close of the 1908 manufacturing season on account of low water but, last summer operations were helped by an abundant water supply. The large volume of the Ottawa rivers and tributaries had a beneficial effect on the industry in all sections, once the early floods passed off. There was no delay at any of the manufacturing points, waiting for supplies of logs. J. R. Booth was unfortunately closed for six weeks during the early freshets, and his mill was never able to overcome the setback. The output consequently fell some 12,000,000 feet. The W. C. Edwards Co., which heads the list in respect of quantity had a steady season and was not affected by flooding. Sheppard and Morse Lumber Co., added 8,000,000 feet to their cut, the extra amount being turned out of the Fraser Co. mill, at Deschenes. The cut of the Fraser Co. for its own purposes advanced from 2,000,000 to 6,000,000 feet and many other small advances are recorded at Ottawa Valley points.

The cut of Lath and Shingles was about an average and there was some increase in the cut of rilway ties. In ties the Edward's Co. cut 250,000 and J. R. Booth 100,000, an average production, but the Perley Lumber Lumber Co. doubled their output of ties, reaching the 40,000 mark. Gillies Bros., of Braeside also turned out a splendid cut of ties.

With the exception of the W. C. Edwards Co., shanty operations are proceeding at the usual pace. The lumber manufacturers unite in expressing most optimistic views for the trade next season. The Edwards Co. will cut as much lumber as in past years drawing on an old surplus of logs for the mills. The stocks are better sold up than for many years past. The only lumber held in considerable quantities is box and mill culls and some recent heavy sales in these sorts have given a better tone to the market. The lath trade promises to be buoyant, judging from demand and the low stocks. The duty of 20 cents extra imposed by the American Government on shingles hindered exports somewhat, and a few of the lumbermen were affected adversely by it.

The number of accidents occurring in connection with the lumbering industry in Canada in 1909 was 113.

Review of the British Columbia Lumber Trade in 1909

Prosperous Conditions Returned after the Crops were Assured—Government's Commission on Forestry Problems—Stocks Greatly Reduced and the Outlook Excellent

The year 1909 was fairly satisfactory to lumber manufacturers in British Columbia, so far as the volume of sales was concerned. Until the last few months of the year, however, the prices were far too low to make the result of the year's operations very profitable. The end of the year found the market much stronger, with prices on all grades of lumber only about $2 a thousand below those which prevailed in 1906, and further advances have brought them to within one dollar. The mills of British Columbia at the close of the year had in stock about 500,000,000 feet, distributed as follows: Mountain mills, 200,000,000 feet; coast mills, 100,000,000 feet; pine mills, 150,000,000 feet; spruce mills, 50,000,000 feet. Logging operations in the mountains in preparation for the season of 1910 are more extensive than ever before. A temporary shortage of lumber may be felt during the coming spring, but the great producing capacity of the mills will overcome this in a short time.

Optimistic Reports from all Points

Conditions prevailing at various mill points in British Columbia are well reflected by reports to the Canada Lumberman, upon the year's business and the outlook for 1910. Among the reports are the following:

"Lumber orders are coming in freely from dealers on the prairies for immediate shipment, at fair prices. Shingles are still low on account of overproduction."

"Overproduction caused many mills to reduce their output in 1909. We did not turn a saw this year until October. We shall watch our market carefully and operate only for immediate requirements. We believe there is a decidedly better tone to market for 1910. The stock on hand is more saleable than last year's. During the year 1909 the demand was limited and the prices about the same."

"Prices in 1910 will be better than in 1909. The outlook is good. The export trade to the United States increased."

"We look for a brisk demand during the first five months of 1910. There was no demand from the United States except for uppers, shop and special bill material."

"We have about all the business we can handle for three months at the best prices we have had for more than a year. Judging from the orders we have taken on during the past ten days we expect a good year. The export trade with Great Britain is quiet, but we are receiving considerable inquiries. The stock wanted is too low. Shingles and lath were slow in 1909. The prices and profits in 1909 were generally worse than in 1908."

"The trade outlook for 1910 is very bright for the first six months anyway. Shingles were very weak in 1909. Lath are strengthening. Stocks are lower all round, compared with a year ago. Prices and profits were slightly better in 1909 than 1908."

"Most of the shingle mills near New Westminster are closed down and the stocks on hand are only one-quarter to one-third of what was carried over a year ago."

"After the heavy duty on shingles going into the united States was put on it was too high and we could not put any shingles in at all. We hope Canada will put heavy duties on all American goods. The shingle market just now is very dull. In 1908 shingle prices started high and slumped. In 1909 they were low and steady. We did much better than a year ago."

"Buyers are coming every day from the prairies to contract. General prosperity, large immigration and good crops will make 1910 the banner year. Our stocks are all sold."

"Prospects for 1910 are of the brightest."

Business Increasing and Better Prices

A large manufacturing company referring to prices states that the prices and profits generally were smaller in 1909 than in 1908. They place the total average price of lumber in 1909 as $17 per thousand feet, and in 1908 as $18. This is to be accounted for by the fact that although the demand for lumber increased during the last half of the year, the accumulated stocks were so heavy that prices did not advance until almost the end of the year. Another firm doing a large business states that the prices were a little firmer and the profits increased according to the increase in the volume of business. The tendency, apparently, therefore, was towards increasing business at slowly improving prices, the profits being regulated largely by local conditions which had prevailed throughout the period of depression.

The timber land situation in British Columbia attracted a great deal of interest during the year 1909. Deputations of influential timber owners interviewed the Government, requesting that licenses be made perpetual instead of being limited to twenty-one years. This, it was pointed out, while appearing to be a concession to the timber owners, would be of great importance as a measure of conservation. The Government, realizing the importance of the question, appointed a forest commission, which held sittings at various parts of the province and took evidence relating to the whole timber situation of the province. The commissioners also travelled the east and south to enquire into methods in other provinces and states. Its report will be presented to the Government during the present session. Pending the report of the commission and the action of the Government based upon it, timber land purchases have been much reduced in number. Premier McBride has, in speaking to a delegation from Revelstoke, stated that licenses would be made perpetual. The important question to settle will therefore be the conditions or restrictions to accompany the change. The fir and cedar limits of Vancouver Island have been the centre of the most active timber purchases during the past year.

The receipts from timber licenses, transfer fees, and penalties, reported by the British Columbia officials during 1909, were as follows:

	West.		East.		Tran. Fees.	Penalties.
January	585—	$81,900.00	694—	$80,004.90	$1,328	$1,050
February	835—	117,046.90	552—	63,746.10	507	825
March	919—	128,800.00	394—	45,375.00	1,106	900
April	529—	74,305.00	409—	47,215.00	938	1,975
May	611—	85,960.00	311—	35,896.00	404	3,100
June	796—	111,823.25	488—	56,249.70	396	3,000
July	760—	106,400.00	378—	42,515.00	744	1,175
August	808—	113,173.81	726—	83,878.80	322	975
September	688—	96,911.15	415—	48,070.00	506	1,275
October	732—	102,558.75	421—	48,673.80	564	1,150
November	597—	83,658.75	993—	114,647.90	572	575
December	825—	115,657.50	700—	80,694.90	636	925
	8,683	$1,218,195.11	6,481	$746,967.10	$8,023	$16,825

The total of receipts from timber licenses was $1,990,010.21. In 1908 the total was $2,301,499.47, and in 1907, $1,363,131.

In connection with the pulpwood industry the Government took an important stand and decided that holders of pulp leases must engage in active development and deposit a substantial bond to show their good faith, or else forfeit their holdings.

Timber Transactions During 1909

Among the timber transactions occuring during the year, one of the most important was that by which the American Financial Securities Corporation secured 54,000 acres around Cowichan Lake, on Vancouver Island, for about $1,000,000. E. B. Caldwell, of Detroit, Mich., purchased on behalf of American capitalists the holdings and business of J. A. Sayward & Co., of Victoria, for about $500,000. On the west coast of the Island Detroit capitalists paid $70,000 for 33 sections near the Alberni Canal. A New York syndicate, including C. F. Hess and N. M. Waters, bought 30 sections at San Juan for $60,000. The most important transfer on the lower end of the island was the sale of the holdings of the Jordan River Lumber Company to the Michigan Pacific Lumber Co. for about $2,000,000, the holdings amounting to 32,892 acres. The following transactions give an idea of the values and general demand for timber lands: Sixteen thousand acres of fir and spruce near Cowichan Lake, $45,000; 1,400 acres of crown grants in the Langley district, along the line of the Great Northern railway, near New Westminster, $30,000, the buyers being DeBeck & Tait, of New Westminster, B.C.; eight sections on Craycroft island for $65,000 to Andrew Howat, Salt Lake City, Utah, and 6,500 acres on Broughton island for $55,000 to the same buyer; 2,000 acres on Phillips arm, $10,000, to a Seattle syndicate that has 40,000 acres altogether; seven berths on Portland canal, at the northernmost boundary of the province, $12,000; sixty-three sections of fine fir on the North Thompson river, 100 miles north of Kamloops, $$250,000, the buyers being Toronto people; seventy sections on the mainland, said to be the most northern belt of fir, $250,000, sold to Thomas Meredith, of New Westminster, and R. W. Gibson, of Victoria; 7,000 acres on North Valdez island and 2,000 on the lower Fraser, $110,000 cash, by Charles F. Heidrick, president of the Pittsburg, Summerville & Clarion railway.

In the lower interior timber sales were not numerous during the last year, but a large transaction was that of the entire holdings of the Crow's Nest Pass Lumber Company to E. G. Filer and associates, of Manistee, Mich., for $1,250,000. D. B. Stevens, of Rhinelander, Wis., bought eight limits and two crown grants on Lemon creek, near Nelson, B.C., making his holdings there sixteen limits and two crown grants.

In addition to the British Columbia Government's intention to make the timber licenses perpetual, a feature of much importance in the timber situation, was the provincial election of Nov. 25 last, when

the people of the province voted almost unanimously in favor of the Government's policy of guaranteeing the interest on the bonds of the Canadian Northern Railway to the extent of $35,000 a mile on 600 miles to be built in the province during the next four years. This will mean the opening up of large areas of timber which formerly were not open to lumber manufacturing because of their remoteness from the markets. These two steps on the part of the Government are expected to lend encouragement to those who have invested in timber lands or who are contemplating such investments.

The Kootenay district of British Columbia contains a large share of the milling capacity of the province. The annual cut of the mills is about 200,000,000 feet of lumber. About 2 per cent. of this goes to United States markets. A small quantity goes to Europe. Local markets take a considerable quantity and the balance, nearly 90 per cent., is sold on the Canadian prairies. The importance of the good crop of last year was therefore great. It was in fact the most important factor in the revival of the demand for lumber in the Kootenay district.

On the whole, the lumbering operations in the Kootenay district during the year 1909 were satisfactory. The business depression of 1907 found a large number of new mills under construction or about to begin operations. Fortunately the industry was in strong hands and with the assistance of the banks managed to pull through the long period of stagnation with no large failures. The logging operations of the winter of 1907 and 1908 and the sawing season of 1908 resulted in a normal output, but the demand for lumber fell off so greatly that the British Columbia mills accumulated stocks of about 400,000,000 feet, which were carried over into 1909. The normal stocks to be carried over by Kootenay mills are about 75,000,000 feet. In 1909 they commenced the year with 125,000,000 feet. As a result of the 1908 experience the mills kept on the safe side in 1909 and got out a smaller quantity of logs. As a result, when the business revival occurred the surplus stock was wiped out. The new cut was also loooked after. The net result of this is that the mills of the Kootenay closed the year 1909 with stocks of about 75,000,000, to be carried over into the new year.

The prices during the year were satisfactory, inasmuch as they enabled the lumbermen to operate throughout the year and to reduce the stocks to their normal level. Some of the mills, in fact, have practically no stocks on hand at present. Prices now are stiffening and from now on the mills expect to dispose of their stocks at a reasonable profit. Some mills, in fact, are to-day refusing to fill orders at current prices and are holding their stocks to realize higher prices later on. The majority, however, are filling orders and find that the demand promises to exceed the supply. At this time last year the stocks in the mountains were 200,000,000 in excess of the demand, while to-day there is a visible demand for all the lumber now cut. British Columbia itself is increasing rapidly as a lumber consumer. During 1909 the coast cities and towns coonsumed half the output of common grades from the coast mills. The logging operations this winter are extensive. All the mills have large gangs in the woods and the majority are preparing to take out more logs than usual.

The Lumbermen's Convention

An important event during the year was the convention of lumbermen, held at the coast in the middle of December, when many important subjects were taken up. Among these were the odd lengths matter and the insurance question, on both of which the convention took strong action.

Losses by fire during the year 1909 were light, although the conditions are very favorable to the occurence of bush fires. The Government and the lumbermen co-operated to prevent the spread of fire and their efforts were unusually successful.

Conditions upon the coast are accurately reflected by the business of the Fraser River Lumber Company, Limited. The year 1909 was one of the most successful ever experienced by the company. The mill operated 274 days of ten hours each last year. The cut amounted to 93,725,000 feet of logs, 104,827,000 feet of lumber and 15,569,000 lath. The car shipments during the year totalled 50,000,000 feet, the greater portion of which went to the prairie provinces. Nearly 2,500 cars were required to carry this lumber. The cargo shipments amounted to about 40,000,000 feet. Four sailing vessels and 17 steamers called at the mill for lumber for all parts of the world. The local sales of lumber amounted to 9,000,000 feet, including the sales in New Westminster and district and in Vancouver.

Mr. W. J. Bell, the well-known lumberman of Sudbury, Ont., was one of the passengers on the C. P. R. train which was wrecked at the Spanish River bridge with the loss of many lives. Mr. Bell had a miraculous escape, but was severely injured about the head and chest. At first it was feared that he would not live, but his excellent constitution pulled him through, and according to the latest reports he was recovering slowly but satisfactorily.

Fred. J. Fulton, K.C., chairman of the B.C. Forestry Commission, left Liverpool with Mrs. Fulton on January 8, and arrived in Kamloops about January 21.

A Prosperous Season Ahead for B. C.

A. D. McRae Predicts Great Activity for Two Years to Come—Everyone Feeling Happy in the West

Mr. A. D. McRae, president of the Fraser River Lumber Co., Fraser Mills, B.C., was a visitor in Toronto last week, having come east on a business trip. He only spent a couple of days in Toronto, and immediately rturned to the west. Mr. McRae had nothing but the most cheerful report to make of the past year's business and of the prospects for the season of 1910. He even stated that he was convinced that although 1910 would be a splendid year, the year 1911 would be even better. In fact it would be the very best that had ever been recorded in the lumber business.

Speaking of the business conditions which prevailed in 1909, Mr. McRae said, "The year opened up with the lumber market in very bad shape. Stocks were fairly large and the demand was almost nothing. We had just got through two years with no market. During the fore part of the season there was no demand and it did not really appear until the crop was fairly assured. In July the outlook for a good crop improved the situation, and in September and October conditions were excellent. From that time on the market has been splendid. The year 1910 has started out with an even better state of affairs, than that of last fall. As to the output of the British Columbia mills there was no perceptible increase during 1909, except perhaps, at the coast where the Fraser River mills came into the market and cut about one hundred million feet. The mountain mills cut about the same amount as they did in 1908. A conservative estimate of the output of the coast mills would be about six hundred million feet. The mountain mills produced probably about eight hundred million feet."

"Every lumberman in the west is feeling fine. There is no difficulty about prices. The only difficulty is to get stocks sufficient to fill the demand. Prices in the west have advanced probably $3 a thousand feet in the last three months and we will have further advances in the near future. The demand is splendid. We are getting orders which will take care of everything we can cut, and we have as much business as we want to take. The same is true of every mill on the coast. The mills are all getting all the business they can handle. Stocks are lighter than they have been for a long time past. Logs have stiffened up a good deal. Good camp run logs are worth $9.50 at Vancouver.

"The odd length situation looks quite promising in British Columbia to-day. The coast mills all started at the first of the year to manufacture odd lengths and as far as future orders are concerned the trade seems to be accepting them without objection. We are now putting in odd lengths and shorts in orders. Formerly we had a lot of trouble in selling shorts. Now we put in from 10 to 20 per cent. of shorts—that is lengths up to 8 feet. This applies, of course, only to the upper grades, flooring, ceiling, sidings, etc. One operator whom I spoke to recently said that the saving thus effected practically pays for the labor to operate his machines.

"There is no tendency to force the prices too high in British Columbia. Although 1910 is going to be a good year we will not reach the top of the wave. In fact, we do not want to. Prices will be kept well within the demand. The lumber situation is complicated to-day like every other trade situation by the increasing cost of living. The high-water-mark of prices of all commodities during each recurring trade cycle is a little higher than during the previous one, and the cost of living goes up accordingly. The cost of manufacturing lumber runs up in proportion each time. We are paying higher wages because it costs men more to live."

Mr. McRae referred interestingly to the experiment which is being made in connection with the bringing out of French-Canadians to work in the company's mills and camps. They expect to take out one hundred more Frenchmen this spring. The experiment has been an unqualified success as the men are well contented and are doing splendid work.

That the "Canada Lumberman and Woodworker" is an important business assistant to its readers and advertisers is continually being demonstrated. The following extract from a letter is a recent proof:—

Marmora, Ont., Jan. 21, 1910.

The Canada Lumberman and Woodworker,
Toronto, Ont.

Dear Sirs:

We wish to compliment you upon the steady improvement in the general news, as well as the price lists given in the Lumberman. We refer to these columns regularly, and hope that you will make them as reliable as it is possible to have them.

Wishing you continued and still greater success in the future, we are,
Yours truly,
THE PEARCE CO'Y, LTD.

The Maritime Provinces—Details of the Year's Trade

Shipments Slightly Greater than in Previous Year — Demand for Lumber Brings Gradual Advances in Prices—New Brunswick and Nova Scotia Statistics

The season of 1909 in New Brunswick was not unlike that, in other parts of Canada, so far as the lumber trade was concerned. Shipments from New Brunswick ports increased by about nine million feet compared with 1908, but even at that they were some forty million less than in 1907. The curtailed logging operations of the previous winters have now resulted in a practical clean up of raw material at St. John, and accordingly the mills will make a late start this spring, as they must wait for the arrival of the new logs, about the middle of May. The tendency of prices throughout the year was towards a gradual advance in most lines except shingles. English spruce deals at St. John, for instance, sold at $13.50 to $13.75 at the beginning of the year and at $14.25 to $14.75 at the close of the year. Shingles opened at $3 for duitable "extras" and $2.50 for duitable "clears." At the close of the year the prices were about $2.70 to 2.80 for duitable "extras" and $2.20 to $2.30 for duitable "clears." Lath opened the year at $2.75 to $2.85 for duitable. At the close of the year the prices was about $3.25.

The shipments from the New Brunswick ports during 1907, 1908 and 1909 were as follows:

Port.	1907. Sup. ft.	1908. Sup. ft.	1909. Sup. ft.
St. John	207,054,632	135,508,971	144,445,196
Campbellton	17,592,977	35,583,102	32,737,124
Dalhousie	17,500,000	15,000,000	19,500,000
Bathurst	10,787,900	10,087,319	13,937,000
Chatham	35,931,982	50,698,668	48,375,296
Newcastle	36,436,115	24,917,440	23,913,871
Richebucto	1,623,549	2,455,120	3,899,290
Buctouche	1,254,750	463,288	908,730
Outports of Sackville	3,722,652	11,683,896	14,029,204
Shediac	.....	2,094,000	3,305,589
Hopewell Cape	19,072,568	7,224.504	.....
Harvey	3,688,082	10,728,448	*10,728,488
Totals	354,665,207	306,445,756	315,779,788

*Harvey statement for 1909 has not been received. The same cut as 1908 has therefore been credited to this place, so as to assist in making the totals. If the figures for Harvey are omitted altogether, the total is 305,051,300 feet, or practically the same as the total, including Harvey, for 1908.

Compared with three previous years, the total shipments for last year were as follows:—

	No. of Vessels.	Tons.	Deals, etc. Sup. ft.
1906	379	754,274	420,182,246
1907	312	722,157	354,665,207
1908	296	720,904	306,445,756
1909	332	807,982	315,779,788

The value of shipments of lumber to the United States from New Brunswick during the years 1908 and 1909 is given by the American Consul at St. John as follows:—

Canadian Lumber—	1908.	1909.
Box wood	.....	$500.00
Clap boards	$74.00	.....
Cord and fire wood	832.00	1,335.00
Laths	234,720.00	336,933.00
Lumber	167,251.00	376,777.00
Piling	11,752.00	5,410.00
Pulp—Pulp wood	63,865.00	117,112.00
Wood pulp	402,995.00	674,539.00
Shingles	7,657.00	53,726.00
Ship knees	.....	2,056.00
Spruce, unmanufactured	.....	2,000.00
Staves	2,384.00	988.00
Total Canadian	$891,530.00	$1,571,376.00
Products of American logs:—		
Laths	$65,006.00	$127,436.00
Lumber	535,918.00	850,076.00
Shingles	23,657.00	80,163.00
Shooks	.....	136.00
Total American	$624,581.00	$1,157,811.00
Total Canadian and American	$1,516,111.00	$2,729,187.00
Increase in 1909	.....	$1,213,076.00

The deal shipments from St. John to the United Kingdom during the years 1907, 1908 and 1909 were as follows:—

	1907. Sup. ft.	1908. Sup. ft.	1909. Sup. ft.
John E. Moore & Co., Ltd.	70,294,047	43,727,541	48,182,020
W. M. MacKay	75,017,207	40,060,416	42.548.238
George McKean	24,822,944	15,970,059	26,662,679
Alex. Gibson Co.	29,915,822	25,173,212	20,238,517
Others	7,004,612	10,677,743	7,300,000
	207,054,632	135,608,971	144,931,454

During 1909 the shipments of birch timber from St. John amounted to 3,292 tons compared with 2,249 tons in the previous year and 2,820 in 1907. In 1906 the total was 4,507 tons. With the exception of 363 tons all of the birch timber was sent to Liverpool. Messrs. Moore & Co., forwarded 2,045 tons, and Mr. George McKean 1,248 tons.

The falling off in 1908 was due to the unprecendeted depression of the British lumber market. In 1909 conditions improved considerably and accounted for the corresponding increase in exports to that country.

The shipments from the Miramichi during 1909 were as follows:—

	Ft.
F. E. Neale	26,000,000
J. B. Snowball Co., Ltd.	20,347,000
D. & J. Ritchie & Co.	11,222,000
T. Lynch & Co.	7,887,000
Geo. Burchill & Sons	6,938,000
J. A. Rundle	4,340,000
A. & R. Loggie	782,000
Total	77,516,000

In addition to this there were 31,500 cords of pulpwood shipped by the Miramichi Lumber Co., to the International Mills in the United States. This pulpwood was rossed on the Miramichi,

The stock wintering at Miramichi at the end of the year 1909 was as follows: Merchantable spruce, 8,070,000 feet, merchantable pine, 2,827,000 feet, 4th quality, 428,000 feet, ends, 665,000 feet, boards, 1,286,000, scantling, 633,000 feet, birch, 117,000 feet, hemlock, 642,000 total, 14, 668,000.

The quantity of lumber on hand at St. John at the beginning of the year, available for shipment, was about 25,000,000 feet.

The English market during the year 1909 was by no means active. While 1909 shipments exceeded those of 1908 by some nine million feet, the shipments during 1908 were very small. Prices ruling in the English market have not been entirely satisfactory, as a result of the Riga goods. During the year 1909 the freight rates were exceptionally low, which in a manner assisted the shippers, otherwise the results in the trade would have been disastrous. During the coming year it is expected that with favourable weather conditions the New Brunswick cut will be about an average.

New Brunswick is expected shortly to follow Ontario's lead in the matter of prohibiting the export of pulpwood from crown lands. Premier Hazen in a recent speech referred to the matter as follows: "The time has arrived when New Brunswick should adopt a policy that will have the effect of causing the raw material of our forests to be manufactured by our own people and in our own province. It is now time to put a stop to the export of pulpwood from the crown lands at least. I believe the government of New Brunswick would be acting in sympathy with public sentiment if it placed a restrictive export duty on all pulpwood and raw material cut on crown lands."

The Canadian Forestry Conventon

The Eleventh Annual Convention of the Canadian Forestry Association will be held in the Legislative Buildings, Fredericton, N.B. on February 23 and 24. The sessions will be opened at 10 a.m. on the 23rd by addresses from the representatives of the government, municipal, educational and commercial institutions. Mr. Thos. Southworth, of Toronto, president of the Association, is expected to preside, and others who have signified their intention of taking part are: Hon. Clifford Sifton, Chairman of the Commission of Conservation; Hon. Jules Allard, Minister of Lands and Mines, Quebec; Hon. W. C. H. Grimmer, Surveyor General of New Brunswick; Dr. B. E. Fernow, Dean of the Faculty of Forestry, University of Toronto; Mr. E. A. Sterling, Forester of Pennsylvania Railroad; Mr. W. C. J. Hall, Supt. of the Bureau of Forestry, Quebec; Prof. Gordon Tower of the University of Maine; Prof. R. B. Miller, of the University of New Brunswick, etc.

Special rates have been granted by the railroads and a large attendance is expected. Further information may be had by addressing the secretary of the Canadian Forestry Association, Mr. James Lawler, who will be at Fredericton till after the close of the Convention.

A. B. Smith, died at Dundurn, Sask. on January 18th. Deceased came to Saskatoon only a few weeks ago from the coast, where he had been engaged in the lumber business.

The E. R. Burns Saw Company, Limited, have recently installed a lot of special machinery and have introduced some new and up-to-date features in their works—all with a view to making "Burns Saws" more popular than ever.

Nova Scotia's 1909 Lumber Output

Exports Amount to Nearly Three Hundred Million Feet—Prosperous Outlook for 1910

During the last two or three years there has been little money made in the lumber trade in Nova Scotia. The manufacturers are, in fact, waiting for the return of normal conditions, such as those which prevailed before the recent slump in the values of the world's commodities. At present, however, stocks of manufactured lumber in the hands of both producers and consumers in the world markets are low and the lack of demand is all that is keeping prices low. It is expected constantly that as soon as the demand for lumber products improves the values will necessarily advance satisfactorily, as the demand is practically certain to outrun the supply. Spruce, the staple lumber of Nova Scotia, has not fluctuated in price during the last two years to the same extent as other woods, notably hemlock and birch. During 1909 spruce remained at quite an even price, which was just sufficient to pay the operating expenses, whereas hemlock and birch were operated only at a loss. As a result very little hemlock and birch will be cut during the coming year. The cut of spruce will be normal, but no more. It is expected that the smaller portable mills will do more work this winter than last. Production of the larger stationary mills will be smaller. During the year 1909 it is estimaetd that the cut of lumber in Nova Scotia amounted to 220,000,000 superficial feet. About one-half of this went to Europe, Great Britain and the remainder to the United States, South America, the West Indies and the local markets.

Notwithstanding the depression in the export trade with England and a very slack demand during part of the year from the United States, the shipments were extensive and stocks were cleaned up to an extent which will result in the coming year's business depending upon the present winter's cut of logs.

The lumber exports from Nova Scotia during 1909 were as follows:

Port.	Feet.	Port.	Feet.
Halifax	40,000,000	Lunenburg County	38,800,000
Sherbrooke	4,687,282	Shelburne	3,500,000
Hants County	63,000,000	Annapolis	16,000,000
Pictou	5,283,721	Digby County	30,000,000
Pugwash	21,633,275	Parrsboro	34,000,000
Northport	3,500,000	Liverpool	15,000,000
River Hebert	4,500,000	Yarmouth and Tusket Wedge	13,000,000
Shulie	5,500,000		
		Total	298,404,278

The above figures do not include the export of laths, shingles, piling and some square timber and hardwood. These, taken together with the local consumption, would materially increase the value of the output.

In the county of Colchester, N.S., the lumber business is one of the most important industries. The cut last season in that county is estimated at 37,000,000 feet. During the current season it will probably be about 62,000,000 feet.

From Cumberland county, N.S., the shipments of lumber were as follows: From West Bay, 34,000,000; from Pugwash and North Port, 25,000,000.

One of the most important events to the lumbermen of Nova Scotia during the year 1909 was the taking of a forest survey for the whole province. This work was placed in the hands of Professor B. E. Fernow, Dean of the Faculty of Forestry, Toronto University, who with a staff of provincial timber experts and forestry students, cruised the whole province and are now preparing their report, which it is expected will be presented shortly. Nova Scotia is the first of the maritime provinces to undertake a work such as this. Another matter of considerable importance which developed during the year was a proposal for uniting the lumber operators of Nova Scotia in some manner which would eliminate competition at the selling points. It is felt generally throughout the province and through Nova Scotia, that some such step is imperative if the lumber business is to be continued upon a paying basis.

A large Nova Scotia exporter reports, under date of Jan. 19, that in western Nova Scotia trade has been good and stocks are well cleaned up, with some heavy shipments now loading for South America. Supplies for the coming year will depend on the winter's cut of logs. Since the first of the year it has been good logging in the woods, but there is a break in the weather now and the snow, which was not over a foot, has been wiped out. We have escaped entirely the blizzards and heavy storms recently occuring in the Eastern States. South American schedules are being placed at $18 to $20 f.o.b. Cuba stock random boards at $15 f.o.b. There is no business in deals in this part of Nova Scotia. There will be quite a large cut of hemlock and spruce for the American market.

J. A. Humbird, president of the Victoria Lumber and Manufacturing Co., with E. J. Palmer, the company's manager at Chemainus, B.C., recently spent several days inspecting the properties of the company, and consulting with its representatives in respect to business affairs. Mr. Humbird left later for his home in Minneapolis.

Newfoundland and Labrador

Much attention was directed during the year 1909 to the forest resources of Newfoundand and Labrador. The most notable event of the year in this direction was the opening of the extensive pulp mills established at Grand Falls, Newfoundland, by Lord Northcliffe, the well-known Englisher publisher. These mills are now producing large quantities of paper at what is said to be a surprisingly low cost. The Albert Reid Company have also established in Newfoundland one of the most modern paper mills in the world. The Labrador Pulp & Paper Company, a large British-American concern, of which John McMartin is president and R. H. Rein vice-president, have taken over extensive tracts of land in Labrador, and will engage in the manufacture of pulp and lumber on a large scale. About 2,000 square miles of well timbered lands are expected to supply plants at Sandwich bay and Hamilton inlet with an annual output of 140,000 tons of pulp and 30,000,000 feet of lumber. Manufacturing will begin early in 1910, and already a large part of the output has been contracted for, one Italian concern taking 50,000 tons of pulp annually for seven years. The rest is expected to be sold in England. About 2,000 men will be employed from the outset.

The Newfoundland Government has taken active steps to draw public notice to its forest resources. In a statement regarding the islands pulp areas, recently issued, it says: "In the Gander watershed are about 1,700 square miles of timbered country comprising the best pulp areas on the island, with unequalled water powers." It is claimed that it is impossible to find 10 per cent. of waste land in this area. Nine hundred square miles of this district are held by the Timbers Estates Company, and 800 by W. H. Taylor, of St. Johns, Newfoundland. The holdings of H. C. Thompson, of Philadelphia, whose pulp territory is located at Bay du Nord, are described as follows: "Operations will shortly begin on the 600 square miles owned by this company, which has excellent pulp and timber reserves and splendid water power to aid it in its development work." Another recent incorporation is the News Pulp & Paper Company, with a capital of $1,000,000, which is to engage extensively in pulp manufacture. The location of the mills and limits is not yet disclosed.

An event of much importance was the recent receipt of information by the Government that there is a pine belt of 2,000 square miles, running through the Exploits and Gander valleys, containing the best grades of white pine on the market, which is worth from $50 to $55 per 1,000 feet. The remaining pine in the country appears to be intermingled with other woods. To get it out, therefore, involves more labor, and it is unprofitable unless the other woods necessarily cut at the same time are also utilized.

The export of wood from Newfoundland amount to about 45,000 tons annually, valued at $350,000, in the form of lumber, laths, and shingles, and about 3,500 tons, valued at $40,000, are imported each year. There is also an annual importation of mast pieces to the value of $8,000. The woods exported go to the United States, United Kingdom, and Argentina, and the wood imports come principally from the United States and Canada.

Serious Lack of Snow in New Brunswick

A despatch from St. John, N.B. dated Jan. 25, states that the present winter is viewed by the lumbermen of the province as the most dismal prospect which they have ever experienced. "It is a death blow for the lumbermen," said Mr. A. McLeod, a practical operator of thirty years' experience, "I have closed down my camps near Annandale, on the Central Railway, and my men are all idle, with the exception of a few who are chopping in the yards. The fact that the little snow we have had is gone would not be so serious were it not that there is no frost in the ground at this advanced point in the season, and there is therefore very little prospect of good hauling before spring. Even tail dragging can hardly be attempted. The only winter I can remember which aproached this is that of just 25 years ago, when I was operating in Nova Scotia. On January 23rd of that year, there was not a handful of snow in all Nova Scotia, but the ground was very hard, and snow began to fall heavily the next day, with the result that I had every stick of lumber out by March 17th, and paid all my men off in Parrsboro that night. No good luck of that nature can be expected this year.

"There are a number of large lumber operations along the Central this year, and all are now in the same position as my own. I was in Moncton to-day, and met there great numbers of men who had come out of the woods from about Harcourt because of the closing of the camps. There is simply nothing doing. The men who get lumber out this spring wil make money out of it, for prices will be very high, owing to the scarcity."

Mr. Fred M. Thompson, of Teeswater, Ont., is on a business trip to New Brunswick. He will also visit Ottawa and a number of places along the St. Lawrence where he will make shipments of hardwood lumber to his Old Country firm.

Review of Quebec's Lumber Trade for the Past Year

Trade Increased and the Home Market Improved—Statistics Show Total Exports of Nearly Two Hundred and Fifty Million

The season of 1909 in the Province of Quebec was in practically every respect a most satisfactory one for the manufacturers and dealers in lumber and pulp. The exports were greater than those of 1908 and the demand was materially improved, especially from the home market. Among the more important events of the year the most noticeable was the fact that the Premier of Quebec, Sir Lomer Gouin, at the beginning of the summer stated that when the present agreement with pulp wood manufacturers had come to an end, no more pulpwood would be exported from Crown lands. Since that time the Premier and several members of the Cabinet have repeated this statement and legislation is now in course of preparation which will give this decision the effect of law at the coming session of the Quebec Legislature. It is believed that this law will have the important effect of inducing large American interests to establish modern pulp and paper mills in the Province of Quebec. The importance of this measure may be gathered from the fact that the province has 200,000,000 acres of Crown lands. Among the industrial developments of the year, possibly the most important was the beginning of an industry at La Taque which is now being established and which is known as the Quebec St. Maurice Industrial Company, in which two million dollars is being invested, and which will have machinery of the most modern type for the manufacture of chemical pulp. The output will be fifty tons a day and the plant is expected to be in operation by the middle of July. The output from this plant will be shipped to the New England States. In the matter of forest and bush fires, Quebec, like the rest of Canada, escaped much more easily during 1909 than in previous years. Better methods of forest ranging and a plentiful rainfall reduced the possibility of fires spreading. It is of interest to note also that the Quebec Government has under consideration the adoption of more strenuous laws to safeguard the forests from fires.

An event of much interest to lumbermen during the year was the sale by the Quebec Government of the timber cutting rights upon 508 square miles of the Crown lands along the line of the National Transcontinental Railway. The awards were made in each case to the highest bidder and the prices were unusually satisfactory. The Government stipulated in connection with this sale that all timber taken from the land must be manufactured in Canada. This sale was, to some extent, a part of the Government protection plan. By cutting the forest adjacent to the railway, it is hoped materially to lessen the danger of forest fires.

The prosperity which prevailed through Canada during the year 1909 had much to do with the improved prices of lumber. This improvement was general throughout all lines, red pine in particular advancing materially. Hemlock, white pine and box lumber also showed a strong movement towards higher prices. The end of the year found a most encouraging demand for oak. In fact, throughout the year it had been in better demand than for some time past. At the close of the year the prospects were that prices on all lines of lumber would advance during the next few months. In the matter of pulp and paper, the main interesting feature was the business in ground wood pulp. The poor supply of water in American manufacturing centres caused an active demand for this commodity. During the year 1909 there were exported from the Province of Quebec through the port of St. John's to the United States, 149,866 cords of pulpwood, all of which was entered at Rouse's Point, N.Y. Through the ports of Alburg, Fort Covington, Rouse's Point and Malone, there were cleared 10,614 cars of pulpwood at an average of 11 cords per car, or about 116,000 cords; thus making a grand total of 265,866 cords from the province.

Statistics of square timber measured at the office of the Supervisor of Cullers, Quebec, show that the falling off in shipments has continued. The total shipments during 1909 were 31,865 pieces ,the total in cubic feet being 1,544,040 against 1,985,120 in 1908.

Totals of the timber measured at the Supervisor of Cullers' office during 1909 are as follows:

Description of Timber.	No. of Pieces.	Cubic Ft.
Waney white pine	13,287	738,840
Square white pine	1,624	37,520
Square red pine	237	37,520
Square oak	10,188	568,960
Square elm	2,295	108,080
Square hickory	17	520
Waney ash	21	520
Waney birch	4,195	60,840
Waney whitewood	1	80
	31,865	1,544,040

The particulars of the Quebec lumber trade as furnished by J. Bell Forsyth & Company's circular published by the Quebec Chronicle Printing Company show that the total quantity of timber exported from Quebec during the past season was about the same as during the previous year. Compared with other years this shows a material reduction. The increase shown in the total export of wood goods from the St. Lawrence is attributable to larger shipments of spruce deals. The general trade in the United Kingdom showed improvement, although the advance of wood gods there barely kept pace with the increase of the cost on this side of the Atlantic. Values in the United States markets have advanced in sympathy with the better trade and the improved financial situation. The following statistics in relation to the Quebec trade are taken from the circular above referred to.

The Canadian export trade of wood goods from the St. Lawrence ports for the season of 1909 were as follows:

Shippers.	Montreal.	East of Montreal.	Total. Ft. Bd. Meas.
W. & J. Sharples	9,665,706	30,717,167	40,382,873
Dobell, Beckett & Co.	5,313,065	21,875,007	27,188,042
J. Burstall & Co.	10,573,598	6,404,059	16,978,457
The McArthur Export Co, Ltd	3,143,311	6,595,788	9,739,099
Price Bros. & Co., Ltd	.....	38,643,000	38,643,000
H. R. Goodday & Co.	.....	20,701,766	20,701,766
Harold Kennedy	.....	7,116,770	7,116,770
Watson & Todd	35,542,107	.....	35,542,107
R. Cox & Co.	18,804,045	.....	18,804,045
E. H. Lemay	11,449,989	.....	11,449,989
E. M. Nicholson	6,594,976	.....	6,594,976
Cox, Long & Co.	914,432	.....	914,432
Graddon & Owens	671,716	.....	671,716
Railways, st'mships & sundry shippers	12,372,960	.....	12,372,.60
Totals 1909	115,045,905	132,054,327	247,100,232
Shipments, season 1908	108,606,459	105,867,292	214,473,751
Increase 1909	6,439,446	26,187,035	32,626,481

Canadian exports via ports outside the St. Lawrence are not included in the above, and complete returns of Spruce shipments from ports below Quebec are not obtainable.

The stock of lumber in the port of Quebec, including merchantable and culls on the first of December, 1909, was as follows (the quantity being given in cubic feet for all but spruce and pine deals), which are given in Quebec standards: White pine, square, 29,455; waney, 220,734; red pine, 6,262; oak, 698,097; elm, 88,663; ash, 607; birch, 141; hickory, 1,225; red pine deals, 868; pine deals, merchantable, 7,300; culls, 1,280; spruce deals, meachantable, 221,956; culls, 63,052; pine and spruce plank, 1, 1¼, 1½ and 2-inch, 4,663,133 superficial feet.

White Pine.—The stocks of both Waney and Square Pine are of record lightness, and the supply seems certain to be under the very moderate figures of the past year. The price of this wood must continue to advance, provided the increased cost to consumer does not seriously diminish present consumption.

	Supply.	Export.	Stock.
1909—Square	57,520	1,038,750	29,455
Waney	738,840		220,734
1908—Square	132,560	1,098,779	50,776
Waney	1,060,880		372,681

Red Pine.—The business in this wood is now inconsiderable. The production is small in absence of demand, and the export very limited.

	Supply.	Export.	Stock.
1909	8,680	6,624	6,262
1908	8,200	9,022	4,591

Oak.—The supply has considerably exceeded the export, leaving a larger stock on hand. This accumulation can only be cleared off by an increased demand for export, which will come as soon as improved trade conditions in the United States restrict the shipment of sawn oak scantling to the United Kingdom. Meantime producers need only make what they are prepared to hold for the present. A very limited quantity of large wood seems likely to be the extent of production.

	Supply.	Export.	Stock.
1909	568,960	242,837	698,097
1908	596,160	317,453	395,720

Elm.—The stock remaining is a much reduced and exceptionally light one. The supply seems certain to be moderate, though probably larger than the very small one of recent years. There seems every probability of present advanced prices being maintained, as the increased value of standing timber and cost of manufacturing would make lower figures unprofitable.

	Supply.	Export.	Stock.
1909	108,080	214,682	88,663
1908	87,640	193,781	193,730

Ash.—The supply and demand seem to have almost come to an end, and neither production nor export show any signs of revival.

	Supply.	Export.	Stock.
1909	520	5,390	607
1908	8,040	7,671	3,965

Birch.—For some years past the export business in this wood has been un-

profitable to shippers. It cannot be produced at reduced prices, and unless export value increases, a reduction in quantity shipped must follow.

	Supply.	Export.	Stock.
1909.....	189,500	193,652	141
1908.....	150,920	145,285	4,190

Spruce Deals.—An established advance in the value of Baltic White Deals should assist manufacturers and shippers in obtaining better prices than those recently current. Prospects have materially improved. The stock given only covers the deals wintering in Quebec, in accordance with usual returns. The export returns are by no means complete as representing the entire St. Lawrence shipments, Montreal, Three Rivers and many Lower St. Lawrence Mills making no separate returns of Spruce Deals shipped.

	Supply.	Export.	Stock.
1909.....	2,998,818	2,714,810	284,008
1908.....	2,217,134	2,469,722	249,890

Pine Deals.—The figures given only include Quebec returns. The business of that port in Pine Deals is insignificant. The produce of the Ottawa Mills is shipped from Montreal, and the export returns from that port do not separate Pine Deals from Pine Sidings or Spruce Deals. The production steadily tends towards lighter figures, as the three-inch Pine Deal is replaced by Pine Sidings, two inches and under thick.

	Supply.	Export.	Stock.
1909.....	6,295	1,315	8,580
1908.....	3,960	6,583	3,600

Sawn Lumber.—The year has been a satisfactory one for mill owners. A considerable improvement has been established in prices of all but the lowest grades of pine lumber. Good sidings have further advanced and touched record figures, owing to reduced percentage produced by mills, and strong demand at very full figures from the United States. At present time value is too high for profitable export, though there has been a marked improvement in the United Kingdom.

Poor Business Methods of Small Mills

A short time ago The "Canadian Lumberman" in an editorial, drew attention to the unbusinesslike methods, followed by many of the smaller mills throughout the country. There is no question that failure to appreciate the fundamental principles of business success, is an all too common matter among small lumbermen. Frequently, letters of compliment along this line are received by the "Canadian Lumberman," and it seems to be our unwelcome duty to continually call attention to the matter. There is no reason under the sun, why a lumber manufacturer large or small, should not sit down and figure out minutely the probabilities in favor of his being able to sell his lumber at a price which will pay all his operating expenses and a sufficient profit to make it worth his while continuing in business. Beyond a doubt, if he does not do so he will lose money, and in the end come to serious grief. But the purely personal side of the matter is the least important one. The feature which is most disturbing, is the effect which these operators have upon the lumber trade in general.

Among the letters received upon this matter of late, by the "Canada Lumberman" is one from a large manufacturing company in Ontario, who are very bitter upon the subject. In the course of their letter they say: "In this connection we would remark that we believe the miserable little portable mills, operated as a rule, by men who know next to nothing about the lumber business, are responsible for a good deal of the unsteadiness and irregular prices. They are here to-day and gone to-morrow, have no taxes to pay, and as the farmers and others supply them with logs at prices barely sufficient to afford them wages, without any idea of the stumpage value, the lumber is sold to the small jobbers and middlemen accordingly, who use the prices paid in these small transactions, to keep down the prices of properly manufactured stock, to such a figure, that it leaves very little, if any, margin of profit. This is especially the case in Hemlock."

If it were not for the depressing effect, which this sort of business has upon trade in general, there would be no reason to complain. As it is, when markets are dull, mills which are run on these principles add greatly to the depression. In times of brisk trade they share in the general improvement, and possibly consider themselves as carrying on a sound business. It is sound, only because business is good. If the operator does not know to a nicety what is the difference between his cost of manufacture and the price he secures, he is a menance to the trade, and every effort should be used by those who follow reasonable business methods to have them shown their error. The small portable mill when properly run, is an important factor in lumber production, but when run as is so often the case, on a basis which takes little account of business conditions and principles, it is a disturbing element.

An American exchange has this to say with reference to the coming season's trade. between Canada and the United States. "Canadian lumber shippers will flirt more persistently with the American markets this year than last. A promised broader consuming demand in the United States and in Great Britain, coupled with that concession of seventy-five cents in the tariff charge, makes the U. S. look pretty good to the lumbermen across the border."

Mr. H .McHart has built a new mill at Bedford, N.S., which is now well equipped and ready to start manufacturing lumber.

Eastern Canada's New Vicegerent

Activity and Geniality His Leading Traits—Thirty Five Years in the Lumber Business

Thos. Patterson, Vicegerent Snark for Eastern Canada

Thomas Patterson, the original of the accompanying cut, who is the new vicegerent Snark of the concatmated order of Hoo Hoo for Eastern Canada, arrived on this scene of trouble about fifty years ago, just a few miles from where our mutual friend, Sam Higgins, first struck terra firma. This was in the County Tyrone in the north of Ireland, and after a sojourn of some ten years in the Emerald Isle, he took ship with the rest of the family for this land of promise, and in due course landed in the present City of Hamilton, where he has struggled and wrestled ever since and has mostly been on the job.

His first introduction to the mysteries of green and seasoned, culls and common was through the medium of a tail sawyer, at the age of thirteen years, in a planing mill, from which after a two years' course he graduated into a general utility stop gap. This held him down for another couple of years when he blossomed into a bench hand on sash and doors. At the age of about 20 years he embarked in the business of contractor with his brother John, forming the firm of Patterson Bros., which carried on a contracting and mill business for some fifteen years, when the senior partner, John, withdrew, and the firm of Laking and Patterson was formed, Mr. Laking retiring in 1905, and Mr. Tilley, an old office employee, being taken in, since which the firm has been known as the Patterson Tilley Co.

This experience of thirty-five years, Mr. Patterson thinks has been about as strenuous as almost any occupation can furnish, and his advice to any young man looking for an easy job is to keep out of the lumber supply business, particularly the planing mill and joiner work end of it. However, he has survived the ordeal, and can look back with satisfaction as being instrumental in furnishing a large share of the material which has built up the ambitious city of Hamilton.

As a member of Hoo Hoo, his first experience was at a concatenation held at Honey Harbor, where he and a friend from Hamilton, Guy Long, posed as practical jokers and paid their initiation fee in coppers (two thousand pieces, just think of it), but before the ceremony of initiation was over they came to the conclusion that the joke was on themselves as they certainly got everything coming to kittens.

Mr. Patterson has attended the annuals, with two exceptions, since his initiation, also the late meeting of delegates at Chicago, and speaks highly of the camaraderie and goodfellowship which exists amongst members of the order, with whom he came in contact at these meetings, and would recommend members who plan a trip for September next, to take in the annual at San Francisco, and bring along their wives and daughters.

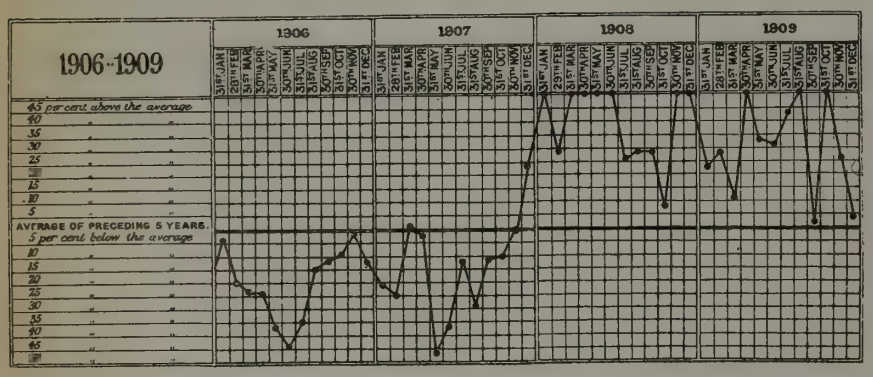
Important Interswitching Decision

A decision recently reached by the Board of Railway Commissioners of Canada, in connection with the interswitching charges of the railways at Montreal, which applies to all other parts of Canada where interswitching is done, is of great importance to lumbermen. By a decision dated September 1, 19$8, the Board of Railway Commissioners issued an order to the effect that the charge for interswitching between a distance of four miles should only be ten cents per ton on the shipper instead of the 20 cents that the railways were charging.

For switching between such points as Mile End and Hochelaga the railways refused to apply this ruling, claiming that they were exempt because these were separate terminals. Complaints were made by the Transportation Bureau of the Board of Trade and also by individual shippers of Montreal to the railways, and finally to the Railway Commission, that the rule applied between any two stations whether separate terminals or not. The Board has now upheld this contention. Since Sept. 1, 1908, the railways have been exacting the higher charge, and the amount of traffic interswitched during that time in and about Montreal has been enormous. Many shippers now declare that they will enter action for the difference of ten cents per ton, which they have been paying during that period.. The total will probably run into a great many thousand dollars.

The Past Year's Lumber Trade of the United Kingdom

Gradual but Healthy Improvement in the Demand—Slight Falling off in Imports—Prospects Encouraging for 1910—Statistics from the Large Ports



The consumption of wood in the United Kingdom, was again small during 1909, but all reports agree that the trade in 1909 was far more satisfactory to importers than in 1908. Prices rose gradually, but regularly from the beginning of the year to the end and there was less inconvenience from an oversupply than for many years past. The end of the year found stocks moderate and shippers asking increased prices for 1910 deliveries.

The Following table shows the quantity of wood imported into the United Kingdom from 1906 to date:

	1906. Loads.	1907. Loads.	1908. Loads.	1909. Loads.
Colonial deals, battens, etc.....	1,425,112	1,128,544	1,000,356	1,050,106
Colonial timber and hardwoods..	73,539	45,086	39,660	34,045
Foreign deals, battens and boards	5,267,148	4,856,879	4,488,091	4,671,975
Foreign timber and hardwoods..	3,174,247	3,467,898	3,843,665	3,394,116
Colonial and foreign staves	139,041	171,721	147,028	126,339
Totals, in loads	10,079,087	9,670,128	9,518,800	9,276,581
Value	£25,580,239	£24,873,976	£22,081,622	£21,799,880

London's Lumber Trade More Satisfactory

The following diagrams showing the perodical estimates of the duration of supply, in comparison with the averages of the same, at the same time in the previous five years are based on the monthy statistics issued by Foy, Morgan and Company, London.

Canadian Pine.

Canadian Spruce.

The lumber trade in London, during 1909 is dealt with by Denny, Mott and Dickson, Limited, in their wood market report as follows: "Business during 1909 has been of a less anxious and onerous character than obtained in 1908. The expected expansion in the demand was not realized to any very appreciable extent, but light supplies at most of the shipping ports removed the danger of excessive imports and consequently, unduly keen competition in quitting the generally modest landed stocks in the United Kingdom, with which the year opened. A soundly legitimate trading profit has therefore been generally realized, and this fact has greatly compensated for the want of expansion in the volume of consumption. It is to be noted, however, that some branches of the timber trade are contracting to unfortunately small dimensions, owing to the great cost of the timber, however unavoidable such increase in cost may be, so driving consumers to seek substitutes, not necessarily other woods. Such important shipbuilding woods as Teak an Waney Pine Timber are notable instances of the dwindling of what used to be very appreciable factors in the business of the timber merchant.

Waney Pine.—The import of 1st class timber has been light, owing to the shortage of stocks in Quebec. The demand has been normal for the short wood required in the Liverpool and Manchester districts, and stocks are light. The long deckwood has, during the late Autumn, been in demand, and stocks are very reduced in the chief importing centre—the Clyde. Shippers report that the quantity for shipment this year will be still less than that of last year, and still higher prices will be required; if so, there is no doubt the consumption will be further restricted, as already the cost of the converted material has reached an almost prohibitive level. Oak.—the demand has been unsatisfactory, and prices, both to shippers and importers unremunerative. Stocks are likely to be fully sufficient for all likely requirements. Elm.—Imports have been less than usual, as stocks on this side in the early part of the year were excessive. The demand has not been satisfactory, and stocks still remain more than sufficient for the indifferent rate of demand.

Spruce.—Stocks throughout last year have been generally below the average of the previous three years. Prices have not fluctuated to any large extent and, with average deliveries, the market has kept in a sound and healthy state, as stocks have not accumulated and there has not been no undue pressure to realize.

There has been a quiet demand for Oregon pine, and prices have been generally strengthened by the steady improvement in the f.o.b. rates, owing to the very large home consumption. The U.K. markets during the first half of the year were stady with fairly light stocks, but owing to several large cargoes arriving during the autumn, prices have been reduced, and until the excessive stocks go into consumption there is little prospect of any improvement in the present unremunerative rates.

Importations of Canadian woods into London during 1909, and previous years, were as follows:

St. Lawrence—	1905. Pieces.	1906. Pieces.	1907. Pieces.	1908. Pieces.	1909. Pieces.
Pine deals, etc.....	738,000	898,000	891,000	521,000	612,000
Spruce deals, etc.....	1,764,000	1,967,000	1,081,000	815,000	857,000

Birch, Nova Scotian, etc.	..	139	212	802	123	310	487

Messrs. Churchill & Sim in their annual London circular say: "The record of the pine deal market for 1909 is a repitition of that of the previous four years. A small importation, a grudging demand at very high prices, and a small stock kept in docks and mills to supply this demand in retail as it rises. Prices have perhaps gone a little higher in 1909 than ever before, but they were so high already that the difference is not very appreciable. Of Spruce deals the importation into London has again been a very small one. They have been in better demand elsewhere, and prices have gradually appreciated during the year. With anything like a normal consumption this tendency would have been much more pronounced, there having been less selling pressure than usual. It has been the lack of this consumption which has prevented a good year's trade. The prospects for the near future are favourable, and any revival in general conditions would lead to a more lively market in 1910. For Birch planks the market has been perhaps steadier than usual during the year. The supply has always been sufficiently ample to prevent much rise of price, but it has been worked through quietly, and the remaining stock is a small one. Birch logs have not been in much favour, and the stock has accumulated since 1908. Elm also has been in rather fuller supply than a feeble market has been able to take off. Yellow Pine timber and the rest of the Hardwoods, including Oak, are negligible, so small has been the trading in them during the past year."

A Quiet Season in Liverpool Trade

At Liverpool the trade of the past year was not such as to give importers much satisfaction. After a quiet and featureless year the members of the wood trade, generally report that their business is still dull and unsatisfactory. The coming year, however, shows many hopeful indications. Imports of Quebec, square and waney pine have been exceedingly light, amounting only to 87,000 feet, compared with 134,000 in 1908, and 177,000 in 1907. The consumption of these woods also

declined to 115,000 feet in 1909, as compared with 163,000 in 1908 and 186,000 in 1907. The stocks on hand at the close of the year were 86,000 feet for 1909; 114,000 for 1908 and 143,000 for 1907. New Brunswick, &c., spruce and pine deal imports amounted to 35,600 standards against 35,080 in 1908. Stocks on hand at close of the year, were 5,800 standards, compared with 7,760 at the end of 1908. Quebec pine and spruce deal imports during the year were 20,580 standards, against 23,150 in 1908 and 26,690 in 1907. Stocks amounted to 15,800 at the close of the year, compared with 16,140 at the close of 1908 and 12,260 at the close of 1907.

Following is a table showing the consumption and import of Canadian Lumber deals, &c., in Liverpool, Birkenhead and Garston, for the month and year ending December 31, 1909:

	Consumption. Jan. 1 to Dec. 31.			Import. Jan. 1 to Dec. 31.		
	1907.	1908.	1909.	1907.	1908.	1909.

At Manchester the imports of Quebec Board Pine during the year, showed a considerable decline, amounting to only 447,000 feet against 473,000 in 1908 and 661,000 in 1907. Stocks however, were also light at the end of the year, amounting to 286,000 feet, against 323,000 in 1908 and 383,000 in 1907. Spruce and pine deal imports for the year, were 60,680 standards against 58,430 in 1908 and 67,110 in 1907. Stocks on hand at the close of the year were also lighter, amounting to 15,420, as compared with 19,010 in 1908 and 21,600 in 1907.

Following is a table, showing the consumption and import of Canadian timber deals, &c., at Manchester Docks, &c., for the year ending December 31, 1909:

	Consumption. Jan. 1 to Dec. 31.			Import. Jan. 1 to Dec. 31.		
	1907.	1908.	1909.	1907.	1908.	1909.

	320	1,920	1,220	500	670	Loads
Birch planks—						
Manchester	67	879	564	388	1,224	
Liverpool	182	800	242	497	594	
	249	1,679	806	885	1,818	Stds.

Oak log imports dwindled to 56,640 cubic feet. Demand was restricted, but prices were firm. Stock amounts to about 75,000 cubic feet. 2nd. class oak was very difficult to sell.

Elm, (square rock), was imported sparingly. Consumption was small and stocks are light. Round wood was in better request.

Ash, (square hewn), was in poor demand, but a good business was done in the round log from the United States.

Quebec Birch was imported moderately and the demand was dull, with prices low. Stock is light.

Maple, has been in moderate demand, though the flooring business was extensive and prices have improved.

Sycamore, Chestnut, &c., were imported only in small quantities.

Quebec pine deals, sidings, boards, red pine, etc., was imported in smaller quantities than in 1908, viz., 19,670 standards in 1909, against

From Messrs. Farnworth and Jardine's annual timber circular, the following information relating to the Liverpool and Manchester trade in wood goods during 1909, is obtained:

The estimated tonnage employed in the timber trade to the Mersey ports, and the Manchester ship canal, was less in volume than the preceding year; being as follows, 1909, 690,000 tons; 1908, 779,000 tons; 1907, 824,000 tons.

The business of 1909 proved to be another year of inactive quiet trade, although, on the whole, of a steadier nature than the two previous years. Imports generally, were not overdone, though quite ample. The consumption in the aggregate, shews a decline of about 3 per cent., as compared with last year, but a little increase in spruce deals and Sawn pitch pine. The general demand remained weak, and the building trade very dull throughout. Stocks, with few exceptions, are moderate, but sufficient for probable requirements. Freights ruled steadily low throughout thee season,

Quebec Yellow pine timber imports showed a further shrinkage, although, practically on a par with 1904. Stocks are now light and prices high.

Waney pine, first class was imported moderately, and demand was quiet, but stocks are now light.

Square pine is very dull, and imports have fallen off.

Red pine was not imported, and is seldom called for.

Demand for pine deals continued poor, until late autumn, when a better demand brought higher prices. Stocks are too heavy. Red pine deals and boards arrived freely, and the demand was dull, though improving towards the end of the year. Stocks are ample and prices firm. Spruce deal imports were 7,400 standards, a little more than in 1908. Prices were steady. Stock is light.

St. John and other N. B. and N. S. ports, pine imports were practically nil and enquiry was very light. St. John Birch log imports were 182,000 cubic feet, against 142,000 cubic feet in 1908. Demand was dull and prices were low. Stocks are light.

Birch plank imports were too heavy. Demand was dull and prices were low. Stocks are too heavy. Birch squares were in limited demand.

Spruce deals (N. B. and N. S.), were imported a little more extensively than in 1908, being about 89,000 standards aginst 86,360. At the beginning of the season stocks were fairly moderate and values steady. This continued with little variation throughout the year. Stocks are moderate. Hemlock was in fair request with prices low. Pine deals from New Brunswick were imported more freely, and better shipments met with favor. Stocks are not too large but are ample.

B. C. and Oregon pine imports were considerably less than in 1908. The demand was dull throughout the season and the consumption small, about 30 per cent. less than in 1908. The stock of logs and planks on hand is very large, being about equal to two year's consumption, on last years figures. Decking also was reported moderate, but the demand was limited.

Uneventful Trade in 1909 at Glasgow

The lumber trade of Glasgow is dealt with by Messrs. Edmiston and Mitchell in their yearly timber circular, in part as follows:

"The year now ending may be described as having been of a comparatively uneventful character, the outstanding feature of the market being one of almost uninterrupted depression throughout. At this time last year we ventured to predict that the chances of early trade improvement were of remote character—unhappily borne out by events—but it is gratifying to be able to state on this occasion that the prospects for 1910 are much more favourable, there being indications that the prolonged trade depression is nearing an end. Prices were for the most part steady, with a tendency to advance as the season drew to a close—notably so in the case of Teak, Waney Pine, Mahogany, Spruce Deals, and American Hardwoods,

"The consumption of wood goods of all descriptions shows a reduction of nearly 45,000 loads compared with last year, but, as trade was dull then also, it is necessary to make comparison with an average year to appreciate the enormous shrinkage properly. Taking the average consumption of three years— 1903, 1904, and 1905—which amounted to approximately 300,000 loads of log timber and lumber, the comparing figures for the present year are 174,000 loads, or a difference of no less than 126,000 loads.

"Imports were also considerably lower than in 1908, the most prominent examples being Quebec logs and deals, and in the case of American Hardwoods there is a drop of nearly 30,000 loads alone. The stocks on hand are somewhat similar to those of last year, and may be described as light all over, with the exception of pitch pine of which there is about 15 months' supply on hand at the present rate of consumption Certainly from a statistical standpoint, everything appears to favour the maintenance of prices, and the probabilities are that an increased demand will have a tendency to bring about an advance.

"For some years past there has been a steady decline in the consumption of Canadian pine in this market, and while this may be attributed to some extent to the prolonged dulness in housebuilding, still a contributing cause has been the high price demanded, particularly for the lower grades, which appear to be out of proportion to the price of first quality. Whatever the reason, however, the fact remains that year after year the figures steadily decline, the reduction in 1909, compared with 1908, being 36 per cent., while it is only a little over half the consumption in 1907. By going back a few years further, some idea is conveyed of the great drop in the consumption, which in 1902 was, of Quebec Pine and Spruce, over 30,000 standards, against 8,500 standards during 1909.. Examples of other woods, which for various reasons have steadily lost ground in public favour of recent years, are American Black Walnut, Canadian Ash, Honduras and Tobacco Mahogany, Hewn Pitch Pine and Austrian Oak, while instances of a tendency towards in-

creased consumption, chiefly on the score of cheapness, may be mentioned African Mahogany, California Redwood, Oregon Pine Planks, and the lower grades of American Hardwoods. As regards the market prospects during the coming year, the feeling is hopeful that there will be a general trade revival throughout the country, which timber-consuming industries will participate in with others."

From Messrs. Calder, Henderson and Livingston's annual timber market, report the following facts, relating to imports of Canadian woods at Glasgow are obtained:

Waney Yellow Pine imports were about an average. Demand was good. Consumption was more than double that of 1908. Stocks are low. Square Yellow Pine was in little demand. Stocks are not heavy. but ample.

Red pine has nearly gone out of consumption. Stock is low. Prices were low but firmed considerably towards the end of the year.

Elm imports and consumption were about an average. Stock is slightly reduced.

Oak stocks are decreasing. Imports were practically nil. The demand is slow.

Ash imports have been light. Prices have been low, because of competition of Gaboon Mahogany.

Birch (St. Lawrence) has been in fair demand all year. Imports have not been heavy. Consumption has been good and stocks are in a healthy condition. Birch planks were imported freely and consumed readily.

Deals Battens and Boards (St. Lawrence) were imported moderately. The demand was steady but never strong. Stocks are heavier than a year ago, but are not excessive.

Spruce (St. Lawrence) imports were moderate and consumption was good. Stocks are heavy compared with a year ago, but are still moderate. Prices are steady with a firming tendency.

Birch logs (N. B. & N. S.), were imported extensively. Prices were lower early in the year and hard to move but with lighter deliveries as the year advanced, the prices firmed up. At the close of the year, stocks in the public yards were nil. Birch planks (N. B. & N. S.), were imported moderately and well consumed, so that the stock now on hand is light with prices firm.

Pine deals and Battens (N. B. & N. S.), were imported moderately, but the demand was practically non-existent. Stocks on hand are heavy and prices inclined to sag.

Spruce (N. B. & N. S.), was imported on a moderate scale and prices were steady. Consumption was fair and the stock now is moderate.

The stock of timber in Clyde at 31st December, 1907-8, and 9, included the following:

	1907.		1908.		1909.	
	Logs.	Cu. Ft.	Logs.	Cu. Ft.	Logs.	Cu. Ft.
Quebec waney board pine	1,677	98,981	2,092	116,956	1,339	68,605

A St. John, N.B., despatch, dated Jan. 26th, says: Next week will see a situation in the sawmill business here which men in business cannot remember to have ever developed before. Every sawmill about the city will be closed down at the same time. Cushing's big mill and Stetson & Cutler's two mills at Indiantown and Pleasant Point respectively usually saw all the year around, with stops of a few weeks during the winter to make repairs. They have all three been running to date, although the other eight mills have been closed for some weeks. Both are to be closed down, however, before the end of the present week, and there will then not be a saw working in the mills of the city. The exact date for the suspension of operations has not yet been decided on by any of the mills. All have plenty of lumber on hand and lots of orders. The delay, which will probably last for a month or six weeks, is altogether due to the absolute necessity for repairs.

Messrs. Graves and Bigwood recently visited Sudbury, and took a trip through the lumber camps.

The Fortnight's Trade at Montreal

Trading Limited Chiefly to Small Transactions — Prices Steady — Montreal Lumber Association Meeting

Montreal Office of the "Canadian Lumberman"
January 28th, 1910.

There has been very little activity in local lumber circles during the past week or two, and trading has been chiefly limited to small transactions. Dealers, however, continue to anticipate a good spring trade with a consequent upward movement in the prices of all classes of lumber. The scarcity of pine in practically all grades is forming an absorbing topic. The news comes from Ottawa that in the spring, prices on pine stocks, from shipping culls and better, will be advanced $2. all round. This news is not favourably received, for while, it is felt that the relative scarcity of pine warrants, slight price increases, it is felt that a heavy drive, such as the one contemplated is more than the market would stand. At the new figures pine would be offered at higher prices than ever before, and it is felt that substitutes would be found from among American woods.

The outlook of spruce, in Quebec, is for higher prices. Even if the been the case for years, and in the ordinary course of events this cut is average, the stocks being wintered this season are lighter than has should have a strengthening tendency on the market.

The lath market continues buoyant. There is an evident scarcity of the first quality, and those who have stocks are holding at firm figures.

Prices of Lumber, generally are unchanged at Montreal.

Sizing up the American lumber situation for 1910, the question of supply and demand, looks to be the ruling feature. If the demand for lumber is normal, the mills will apparently be able to keep abreast of all orders, but should there be larger consuming powers during 1910 there will be a scarcity of lumber and as a result a bullish market.

Pulpwood Situation

On February 1st, President Taft's Commission will visit Canada and make a report upon the pulpwood situation in this country. Their decision will be awaited with interest, since it will have an important bearing upon the tariff problem. It is not felt here, that Uncle Sam will impose a duty of 25 per cent. upon our pulpwood, because any retaliation on the part of the Dominion Government would be more keenly felt by our neighbors, since we are greater buyers, by far from their market than they are from ours. It is true, the States complain that the French treaty gives France advantages in our market that they do not possess, but it is the general opinion that the present tariff with regard to pulpwood will not be disturbed.

The outlook for the pulpwood trade was never more promising, than at the present time. The demand for both ground wood and sulphite pulps is excellent. Newspaper mills are runnig to full capacity, and book mills have more orders than they can fill. The price for ground wood pulp is quoted at, from $18 to $19 at Canadian mill points, and sulphite pulps are worth from $38 to $40.

Successful Issue to Tarriff rate Question in Sight

The Freight Rate Issue

At a meeting of the Montreal Lumber Association, of the Board of Trade, held on January 24th, a favourable report was received from the Board of Railway Commissioners, regarding the readjustment of local freight haulage rates. The Association have worked almost incessantly since the new rates were enforced, to have them lowered. The Railway Companies maintained that the new tarriff was framed in order to give them a consistent schedule, and not for the purpose of increasing their revenue. The association clearly demonstrated, that the increases were chiefly between points where the largest lumber traffic was handled, as for instance, Montreal and Ottawa, and the rates were left unchanged between points of no consequence to the lumber shipper. The Railway companies professed a willingness to draw a fairer schedule, and the commission now announces that Mr. James Hardwell, has framed a new tariff on behalf of the railway authorities.

Representatives from the Railway Companies, the Montreal Lumber Association and the Railway Commission, will meet in Ottawa sometime in February, to discuss the new schedule, and pass finally upon it. Mr. Frank Hawkins, secretary of the Canadian Lumbermen's Association of Ottawa, Mr. Walsh,, transportation expert, of the Canadian Manufacturers' Association and Mr. W. S. Tiltson, manager of the Transportation Bureau of the Board of Trade, have been authorized to act for the Montreal Lumber Association. Mr. Tiltson is open to receive, and would welcome any suggestions from Montreal Lumber dealers concerning point rates, which they are interested in directly, in order that he may be familiar with the requirements of the lumber trade, when the final adjustments are made. In regard to the export rates, the Railway Commission informed the association that a further hearing of the question would be necessary before any decision could be rendered.

Nicolet Falls Pulp and Lumber Co.

The annual business meeting of the Nicolet Falls Pulp and Lumber Company, was held in Danville, Que., recently. Among those present were the following: Hon. P. S. G. McKenzie, Richmond; J. A. Bouthellier, Sherbrooke; B. Quinn, Windsor Mills; J. H. Crepeau, St. Camille; F. B. Chadsey, Nicolet Falls; O. Lamoureux. N.P., South Ham; J. H. Vilandre, Danville; Joseph E. Lepine, St. George de Windsor. Satisfactory reports of the operations of the company for the past year were received. The officers elected for the ensuing year were: O. Vilandre, president; B. Quinn, vice-president; F. B. Chadsey, treasurer; O. Lamoureux, secretary; with the following board of directors; F. N. McCrae, Sherbrooke; Philias Milette, Windsor Mills; J. H. Crepeau, St. Camille; E. W. Tobin, M.C., Bromptonville; and J. E. Lepine, St. George de Windsor.

Personal and General News from Montreal

Mr. C. A. Spencer, is at present making an extended business trip through Ontario.

Messrs. G. A. Grier and Son, report that they practically are not wintering any stocks at their La Chute Mills.

Mr. J. Brosseau, one of Montreal's lumber merchants, is an aspirant for aldermanic honors and is a candidate in St. Dennis Ward.

Mr. Daniel W. Robinson, who died recently in Burlington, Vermont, was well known in Canada. He was president of the Robinson-Edwards Lumber Company.

A delegation from Chateaugay, Que., recently waited upon the Ottawa government with the request that the Chateaugay River be deepened four feet from Chateaugay Village to the New York Central Bridge, a distance of a mile, in order to permit small vessels to pass. The Government promised to have their engineers investigate and report upon their request.

Personal

The annual meeting of the Montreal Lumber Company, was held recently, and the following officers were re-elected. President John McKergow; vice-president, Geo, Dewar, managing director; W. K. Grafftey; secretary-treasurer, H. Brown; The report of the year's business was received and proved very satisfactory indeed. The company have a fair stock of lumber on hand for the coming season's trade.

The death of Mr. Owen E. Owens, which occured in Montreal on Jan. 18th, removes one of Quebec's well-known lumbermen. He was born about 47 years ago, in the village of Stonefield, Que., and at the time of his death was the manager of the Owens Lumber Company, at Montebello, Que., a position which he had held successfully for a number of years. He was a brother of Mr. W. D. Owens, of the firm of Graddon and Owens, of Montreal, and nephew of Senator Owens of Montebello.

Henry S. Graves, director of the Yale school of forestry, has been appointed chief forester of the United States to succeed Gifford Pinchot, removed. It is a striking fact in connection with the new chief forester, that he is a protege of Mr. Pinchot, His appointment therefore is looked upon as a master stroke by President Taft, which may have an important effect upon the involved situation which has followed Gifford Pinchot's removal. The new o1/8cial takes up his duties on February 1. Albert F. Potter, of California, will be appointed assistant forester.

Arch. Milne, a well known and prominent Arnprion, Ont., resident dropped dead at Kippewa on January 12. The late Mr. Milne was in the employ of McLachlin Bros. as manager of supplies for their Kippewa camp. A widow and two children survive.

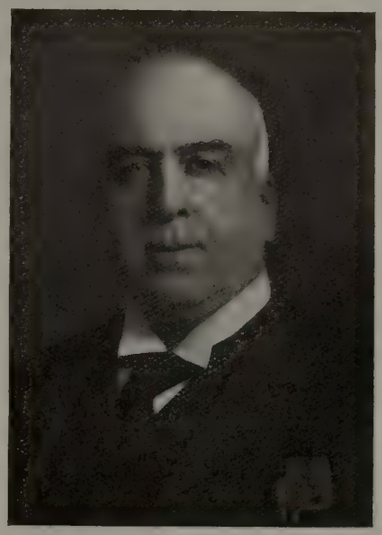
Montreal, Jan. 25, 1910.

The value of the "Canada Lumberman and Woodworker" to its readers and advertisers is based upon its widespread circulation. Evidence of the fact that it is very widely read is afforded by the following letter:—

The Canada Lumberman and Woodworker,
Toronto, Ont.

Dear Sirs:

Received the extra copies of your valuable paper, for which I desire to thank you, also for the kindly way in which you have written up the biography. It will interest you to know that I have heard from an old friend of mine, from whom I have not heard for fifteen years, all through the sketch placed in your valuable paper.



Again thanking you and wishing you continued success,

Yours truly,

E. L. TODD,
(Watson & Todd, Montreal.)

Prominent Lumbermen of Canada

Mr. E. H. Lemay of Montreal—Twenty-Five Years in the Lumber Business - A Pioneer of the Trade

E. H. Lemay, Montreal.

With the history of the Canadian lumber trade, are associated the names of a great number of men who have attained success and won their way to fortune through its ranks. Many of these men were pioneers in the industry and their careers were checked with many thrilling incidents of the early "lumber making" days. Others have won their success in the quieter field, which takes care of the distribution of the finished product of the forest. To this latter class belongs Eustace Hugh Lemay, who twenty-five years ago, loomed upon the lumber trade's horizon.

Mr. Lemay's capital at that time time was not extensive, but he set to work with a determination to succeed, and his every deal was carefully planned and thought out. With that successful lumberman, E. B. Eddy, of Hull, P.Q., his first business training had been gained. Step by step he strengthened his position, until he was placed entirely in charge of the firm's Montreal business. After a time with a confidence in his ability, that has always proven a vast asset to him, he launched out in business for himself. His first transactions were small, but gradually he extended his field of operations.

Twenty-five years is not a long period to look back upon, but in that time Mr. E. H. Lemay has made good and to-day is numbered with Canada's successful lumber dealers. He ships lumber extensively to various English and American points. His position has not been achieved without hard work. Untiring devotion to his business interests, coupled with his shrewd qualities as a buyer, have in the main, been the essential factors in his upbuilding. He was born 62 years ago, of French and Scotch parents in the little Quebec village, of St. Martins. He served the city of Montreal for twelve years on the Board of Harbor Commissioners, and is to-day a director of the Banque de Hochelaga, and of the Montreal Herald.

Practical Foresters Wanted

Editor "Canadian Lumberman."

Dear Sir,—I notice in a brief report from "Indianhead," the distributing point now instead of Ottawa, that two and a half million trees have been sent out from the forest nursery station. This would be about one-half the number of trees destroyed for "Christmas trees" during the same season. This is not gaining very fast on forest destruction.

The report further says, "In 1911 it is hoped to begin the distribution of coniferous trees," etc. The questions that are now being asked at Washington, D.C., are: What has been accomplished in the way of reforestation and tree culture during the past ten years; and what is there to show for the large appropriations made from time to time and the vast sums of money paid out in salaries to scientific forresters" What have the people got to show for it?

Some such questions might be properly asked of our own Canadian forestry servants. Eight years ago Mr. Ward, a millionaire lumberman of Pontiac, Mich., set out fruit trees on 2,000 acres of what was said to be worthless sand plains around his lumber headquarters near Otsego Lake, Otsego Co., Michigan. About this time Mr. Ward was said to be insane and application was made to the authorities to have him committed to an asylum and this reforestation act on his part was cited by his relations, friends and neighbors in support of the testimony as to his mental condition.

Last season, 1909, there was sold from this 2,000 acres of trees $45,000 worth of fruit. These are facts susceptible of proof, and Mr. Ward is reported to be somewhat better of his malady. It is plain to me, therefore, that what we most need in this country is not scientific foresters of the Pinchot type, but more crazy men of the Ward stripe.

Yours truly,

O. E. ELSMORE.

George K. Heard, a prominent lumber merchant of Strathroy, Ont., passed away on January 14th, after a week's illness, Mr. Heard is survived by a widow and young family.

THE MACHINERY WORLD

What Manufacturers of Logging, Sawmill and Woodworking Equipment are Doing

The Disstons' New Canadian Plant

It will be interesting news to lumber manufacturers throughout Canada to learn that the firm of Henry Disston & Sons, Limited, have moved into their large new factory at the foot of Frazer avenue, Toronto, and that they are now equipped to handle everything in the way of orders for saw and planing mill supplies, which was formerly handled from their plant on Adelaide street, Toronto. The new plant gives them about five times the capacity that they had formerly. Their property includes four acres of ground with sidings from all the railroads entering Toronto. The new plant is divided into two large buildings with an enclosed passageway between. The larger of the two buildings is 260 by 60 feet, two storeys high. The other building, which includes the office and the furnace room, is 177 by 60 feet, one storey high. In this building also is located the shipping and stock room, which is 50 by 60 feet. The whole plant is practically of fireproof construction and has been laid out in a manner which ensures the most economic handling of the work. The polishing room, which is all enclosed so as to avoid the spreading of the thick heavy dust which results from the operation of polishing, is 50 by 25 feet.

W. E. Radcliff.

S. Horace Disston.

The most interesting section of the whole plant is the band saw room, which is located in the second storey of the larger building. It is 60 by 260 feet, and is all clear space, not a single pillar being there to obstruct the workmen or the light. All the band saw steel which is used in this department is brought from the Philadelphia plant already tempered, ground and polished. So soon as the Canadian business is extended sufficiently to permit of carrying on this work at the Toronto plant, the tempering, grinding and polishing will be done there also. It is a most important point for mill men to know that in their band saws they are obtaining identically the same product from Toronto as from Philadelphia, and the company therefore make a point of drawing attention to this fact. The buildings are most comfortably ventilated and heated, the heating being done by hot air blast. An indication of the care which the company take to provide absolutely uniform and perfect results, is afforded by the fact that instead of using the ordinary type of forge they have what is known as an American gas furnace which is heated entirely by gas and gives results which can be depended upon to be identical in every case. These furnaces give a perfectly smooth surface and ensure an absolutely perfect braze. Similar care is taken in the matter of providing heat for the tempering and hardening furnaces. Fuel oil is used for this purpose and by this means a perfectly even heat is obtained from one end of the day to the other. The moving of all the heavy materials is effected by means of compressed air.

The Disstons' New Plant at Toronto.

One of the most interesting machines in the plant is a band saw sharpener which will sharpen band saws up to 20 inches in width. This machine is indicative of the company's whole equipment and methods. Everything is of the most modern type and the most recent improvements which have been found to give practical results at the Philadelphia plant have been adopted for the Toronto plant.

The power for the various departments is provided by Westinghouse electric motors. The toothing and grinding departments are run by 50 h.p. motors. The polishing department is run by a 40 h.p. motor and the band saw department by a 30 h.p. motor.

Band Saw Department—Disston Works, Toronto.

Circular and Gang Saw Department—Disston Works, Toronto.

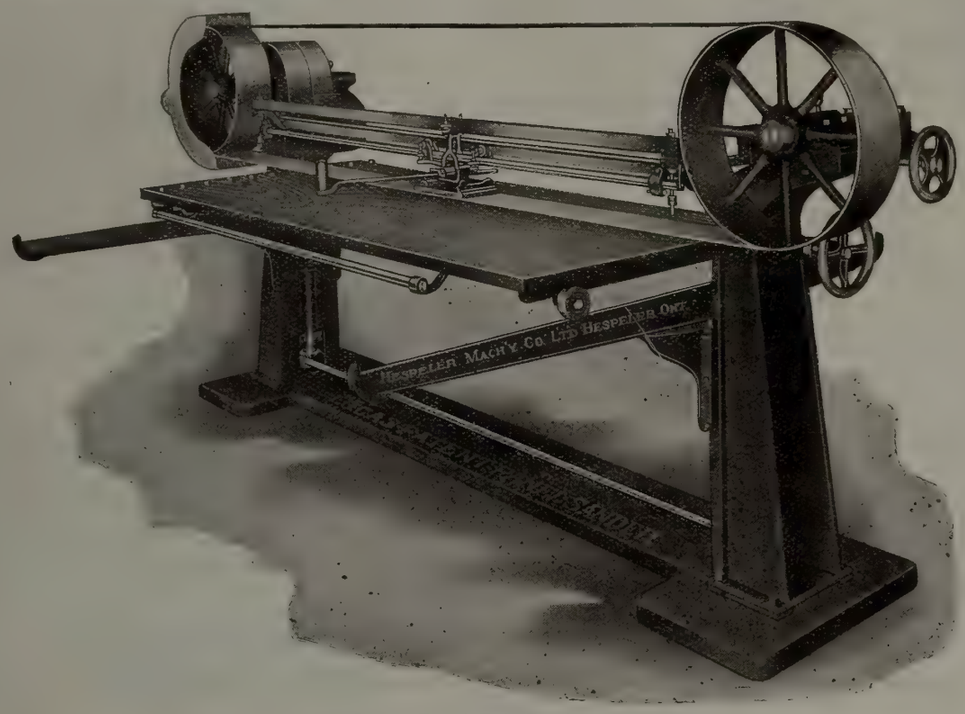
As soon as possible separate departments for the manufacture of cross-cut saws, machine knives and their other lines will be added which will necessitate occupying the whole of their four acres. In their plans the company are making everything as thorough and modern as possible. An indication of this is afforded by the fact that the whole plant has been equipped with intercommunicating telephones to ensure

promptness. In opening their new plant the company are manufacturing circular, band, gang, and mill saws.

Mr. W. E. Radcliff, the manager of the Toronto plant, is well known to sawmill men throughout Canada. All of the company's Canadian business is in his charge. Mr. S. Horace Disston is superintendent of the works, and much of the excellence of the Disston products is due to the minute attention which he gives to the details of manufacturing. The company have also opened a Vancouver office and factory at 128 Cordova street west, where they will do repair work and carry what they claim will be the best stock of saws on the Pacific coast. Mr. W. B. Terrell is in charge of the Vancouver office and Mr. C. E. McGahey is associated with him in that work. Mr. J. Kennedy Hill is the company's travevller in the eastern provinces and Mr. R. O. Stevens is their representative in Ontario. Mr. Stevens is taking Mr. Cecil Dixon's place in Ontario, and Mr. Dixon, who has a large acquaintance among sawmill men throughout the province, will in future devote himself to office work at the Toronto plant.

The company have spent already $175,000 upon the Toronto plant, and are now running full force, with 100 hands in their employ. They came to Toronto some three years ago. Since then they have been continually expanding their capacity. Their business increased so greatly that it was only by obtaining a large plot of ground and building a complete new plant that they were able to handle satisfactorily their increasing business. Toronto may be well pleased at having so extensive and progressive a firm among its manufacturers, and Canadians in general will be gratified by the production of Disston products on a large scale in Canada.

Woods Convertible Disc Side Heads



The S. A. Woods Machine Company, Boston, Mass. have issued an attractive catalogue relating to their Convertible Disc Side Heads in which they explain this new patent in detail, and claim that it represents one of the greatest improvements in planing machine devices ever placed on the market. The catalogue is attractively prepared and the reading matter is exceedingly instructive. For many years the capacity of flooring machines has been limited by the capacity of the side heads to turn out acceptable edge work, and in many cases the feed has been kept down to accommodate the side heads. Probably the greatest advance in recent years in planing machines has been the ability to joint or true off the knives while running. There were no side heads on the market upon which this feature could be accomplished and the S. A. Woods Company undertook to design a head with this idea in view.

The development of these features led to a number of others that showed unexpected advantages, and resulted in the head being brought to a high state of efficiency. The idea of having the head made up of detachable members that will readily build up into combinations with other members, for various classes of work, gave the head an unlooked for range and carried its possibilities beyond the original conception of a tonguing and grooving head for flooring machines only.

In order to understand the special features of the Convertible Disc Side Heads, one should write to the company for a copy of their catalogue which by means of excellent illustrations and carefully prepared description, gives a good idea of the machine and its capacity.

An Efficient Panel Belt Sander

Among the most important machines in a woodworking establishment, the belt sander takes a prominent place. The Lucas Panel Belt Sander, which is built in two sizes, is claimed to be one of the most efficient sanders upon the market to-day. It is manufactured in Canada by the Hespeler Machinery Co., of Hespeler, Ont., who have secured the Canadian rights and who, after investigating it thoroughly, satisfied themselves that it is a successful money saver. Among the claims which they make for this machine are, that its work approaches the nearest to hand-sanding of anything on the market; that hand-sanding and scraping are eliminated; that it is simple, durable and easy to operate; that by its use it is possible to sand irregular shaped panels, tops, panelled doors, mouldings, frames, swelled doors and door fronts. The machine is built to sand stock up to 6-ft. 2-in. x 52-in. x 16-in., and 8-ft. 2-in. x 52-in. x 16-in. The large size is particularly adapted for sash, door and house trim factories. Of the two sizes mentioned above, the former is known as No. 257 and the latter as No. 259.

Lucas Panel Belt Sander.

On account of the simplicity of this machine it is claimed that it does not require an expert machine man to operate it. While the sand belt is running, no other parts of the machine are in motion until pressure of pad is applied to the sand belt by the operator. Short or long strokes, or no stroke at all, are produced at the will of the operator. There is no dead pressure on the work and heavy pressure is possible, with but little effort on account of the leverage device on the carriage. A fine finish, it is claimed can be produced on uneven surfaces, thus preventing the danger of cutting through the veneer on stock which is not perfectly flat. Mouldings can be sanded on this machine by using forms. Readers who are interested will do well to communicate with the Hespeler Machinery Company for further particulars.

The woodworking factory of Hamilton & Gay, St. John, N.B., was destroyed by a fire on January 28, caused, it is thought, by the back draft forcing open the furnace doors. The fire reached the paint room and an explosion blew the factory doors across the street. Besides the factory, the dryhouse and stock room were badly damaged, and it is estimated that 300,000 feet of lumber were destroyed.

Mr. R. Richardson, of Bedford, N.S., will be manager for the new mill erected by Mr. H .McHart at Bedford.

N. S. Clarke, manager of the Fort George Lumber & Navigation company, is visiting Vancouver.

WANTED & FOR SALE DEPARTMENT

PUBLISHERS' NOTICE

Advertisements other than "Employment Wanted" or "Emplyees Wanted" will be inserted in this department at the rate of 15 cents per line each insertion, on the basis of 14 lines to an inch, payable in advance. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Employment Wanted" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies

Advertisements of "Employees Wanted" will be inserted at the rate of two cents a word net. Cash mus accompany the order.

Advertisements must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue.

WANTED—LUMBER, ETC.

Hard Maple Wanted

LARGE QUANTITY HARD MAPLE SAWN to order for delivery as soon as dry. Box 869 CANADA LUMBERMAN, Toronto. 4

Cedar Posts Wanted

200 CORDS CEDAR POSTS 5 AND UP AT the small end. Address Box 896, CANADA LUMBERMAN, Toronto. 5

Wanted Hard Maple and Beech

WANTED SEVERAL GOOD STOCKS OF Hard Maple up to 1,200,000 ft. and a quantity of Beech. Apply Box 888 CANADA LUMBERMAN, Toronto. 5

Basswood and Ash Wanted

1" WINTER SAWN BASSWOOD, 1½" ASH. Will pay good price for good stock. Cash less 2% on cars inspection at mill. Box 873, CANADA LUMBERMAN. 3

Pine, Hemlock, Etc., Wanted

WANTED—PINE, HEMLOCK, SPRUCE, Basswood, Lath, lowest price. Box 906, CANADA LUMBERMAN, Torono. 3

Wanted White Pine Culls

INCH No. 2 WHITE PINE MILL CULLS, Sidings and Stocks. State quantity and price F.O.B. cars shipping point. Box 902, CANADA LUMBERMAN, Toronto. 4

Basswood Wanted

TWO MILLION FEET OF WINTER CUT Basswood. Can use full run of logs. Cut to order. For particulars address Box 879, CANADA LUMBERMAN, Toronto. tf

Lumber Wanted

SPRUCE AND HEMLOCK LUMBER. Spruce and Pine Lath. Cedar Shingles or will contract for mill cut. Write with full particulars. Box 887 CANADA LUMBERMAN, Toronto. 4

Spruce Wanted

WANTED—ABOUT 500 M FEET B. M. OF round long Spruce Timber 20 feet and up, 10" at small end and up, delivery by water during next summer. Address JAMES SHEPPARD & SON, Sorel, Que. 5

Birch

WE ARE IN THE MARKET FOR 300,000 to 400,000 ft. dry Birch of all thicknesses for this winter's shipment. State lowest prices with full particulars re quality, etc. Address THE LONDON LUMBER CO., London, Ont. 3

Wanted—C. and B. Winter Cut Basswood

WANTED 15 TO 20 CAR LOAD No. 1 COMmon and better white winter-cut Basswood to be plump, 1 inch thick when dry. For further particulars apply to Box 889 CANADA LUMBERMAN, Toronto. tf

Soft Elm Wanted

WE REQUIRE ONE MILLION FEET OF Soft Elm sawn to our sizes for delivery as soon as shipping dry; will pay good price for choice stock. Parties in a position to supply some of this, please apply for further particulars to Box 849 Canada Lumberman, Toronto. tf

Logs Wanted

BIRCH AND MAPLE LOGS DELIVERED at railroad or convenient for water shipment. Highest price for right quality. Box 850, CANADA LUMBERMAN, Toronto. 4

Pine and Hemlock Logs Wanted

WE ARE IN THE MARKET FOR PINE or Hemlock Logs to be sawn during May or June on Georgian Bay—State quantity. FIRSTBROOK BOX CO., Penetang. 5

Soft Elm Wanted

WANTED 12/4, 14/4, 16/4, No. 1 com. Soft Elm, prompt shipment, also 20 cars Soft Elm 1x12" and up in lengths 6½, 7, 8, 14 and 16 ft. LUCAS E. MOORE STAVE CO., 11 Broadway, New York, N. Y. 5

Hardwood Squares Wanted

PARTIES IN POSITION TO SUPPLY Hardwood Squares of various sizes and dimensions kindly send for list of sizes required to Box 885, CANADA LUMBERMAN, Toronto. 5

Lumber Wanted for Early Summer Delivery.

800 M ft. 1" Hard Maple, common and better.

Review of Current Trade Conditions

Ontario

The market for all the good grades of white pine in Ontario continues good in spite of the fact that the present is usually a dull season. Stocks are moving satisfactorily and there is an indication of a stiffening tendency in prices, which may result in increases before spring. Hemlock is looking better. B. C. cedar shingles in Ontario have advanced ten cents, but it is a question whether the prices will be obtained very generally. The only thing that can keep the price of B. C. cedar shingles up will be a strong demand from the prairies. If the demand of last fall continues the situation may improve, but the present situation is none too pleasant in Ontario.

The lumber business at Ottawa improved somewhat towards the end of the month of January and prices went up slightly for the more popular high grades. There was an especially good demand for 1-inch good pine sidings, some lots bringing $50 per thousand. The thicker sorts of good pine sidings were also in good demand. 2-inch stock 7-inch wide and up sold at $60. 1-inch good strips advanced about $2 and are very scarce. In fact, good pine shorts have been drawn upon to fill some of the gaps. The improvement in the demand for the upper grades has also been felt among the No. 2 cuts, which are now selling at from $25 to $28. Lower grades are also holding firmly. The box lumber and mill cull situation is attracting much attention at Ottawa. Dry box lumber stocks are being rapidly reduced. Shingles are also advancing in spite of a reduction in export. White cedar XXXX, 18-inch, are quoted at 25 cents higher than at the first of January, and the corresponding brand of white pine are firm at $3.50 to $4. There is a large stock of low grade lath at Ottawa, but inquiries indicate that it will move fairly well. Dry lath is rather scarce, especially the good qualities. The best white pine lath is selling at an advance of 50 cents over last year.

Eastern Canada

Trade continues stead at St. John and Eastern Canada points. The demand from the United States markets is quiet. Boston dealers report that inquiries for spruce lumber are scarcer than they have been for many months. A few large orders for frames have appeared, but buyers generally are not placing much business. Present indications are that fair sized orders might be placed at about $23 or possibly a little less. There is, however, a feeling that as soon as some of the large orders have been placed the mills will become firm holders and the smaller buyers will have to pay higher prices. The demand for random at Boston is quiet and so is the demand for spruce boards. There are rumors of sales of shingles at reduced prices at Boston. Good extras are obtainable at $3.50 and holders are quite ready to sell at this price. Lath have been quiet and good lath are reported cheaper for 1⅝-inch. The prices asked are from $4 to $4.15 and for 1½-inch lath $3.50 to $3.60.

Western Canada

The lumber situation in British Columbia was never in a more satisfactory condition. The present season, which usually is very quiet, is as active as a good summer season. Prices on all good classes of lumber have been advanced within the last fortnight and the indications are that they will yet go up further. There is a bright prospect for the logging industry. The year opens with strong demand for lumber from all sources, domestic, local and foreign, and naturally there is a call for logs. Lumber is now quoted at $13.50 foreign, while it goes about $12.50 for domestic. The shingle situation is not so attractive. Demand is sluggish, and stocks are too plentiful. Prices are inclined to be easier and it is difficult to secure the list quotations.

Great Britain

The course of forward buying was not seriously interfered with by the elections in Great Britain. Importers, however, continue to declare that there are few signs of any special improvement in the building trade, although they admit that the indications for 1910 are brighter than they have been for two or three years past. General trade, moreover, is on the upward grade, and the prevalent opinion is that business is approaching a period of prosperity. Messrs. Churchill & Sim recently resumed their auctions at London, and 3x9 3rd Montreal pine sold at £13. Fourth quality brought on an average £10 15s., and 3x7 sold at £9 5s. Montreal spruce sold at £10 10s. for 3x11, 2nds. 3rds brought £9 16s. Common St. John, 9-inch, sold at £7, and 2½x7-inch at £6 10s.

An improvement all round is looked for at Liverpool. The political excitement is only expected to have a momentary effect. There is without doubt a more hopeful tone to trade. A small cargo or two of spruce deals have been sold at west coast points at prices which could not be obtained a few weeks previously. Stocks at Liverpool are moderate. It is reported that some of the Miramichi and neighboring cuts have been sold to large operators at extremely high prices. Dealers in Canadian pine deals are quietly awaiting fresh arrivals when the next open season sets in. In the meantime there is nothing to note in trade conditions. Pitch pine is quite quiet. Shippers' demands are too high for buyers' ideas and no future business is being transacted. At Manchester it is reported that the trade settled down to business gradually after the New Year's holidays, and a considerable improvement was noticeable, with some advances in price, particularly for yarded spruce, of which 4-inch x 3-inch was selling at £8 per standard ex-canal yards. Other sizes are selling in proportion. Large cossignments of spruce by St. John and Halifax liners were expected and further shipments from Riga, and it was believed that the improvement would be well maintained.

At Glasgow there is very little progress in business to report since the holiday season. Some apprehension was felt at the approaching visits of representatives of Quebec shippers to arrange for the coming season's business, as it was thought that the reported advance in prices would interfere with contracts.

United States

The condition of most of the markets in the United States at present is one of expectancy. From the number of inquiries being received it is evident that the spring trade will inaugurate a healthy movement of lumber. Yard dealers and large contractors as well as the railroads, and in fact all heavy yard buyers, are carefully ascertaining the tendency of prices, and there is apparently enough current demand to absorb dry stocks and prevent accumulation. The market for northern pine at Chicago is quiet, which is usual at this time of year. Prices for the better grades remain strong, but there is no improvement in Nos. 4 and 5. At Buffalo there is a good demand for white pine. The demand is extending to the lower grades, the high grades still selling strongly. At New York the demand for northern pine is fair and prices are firm. Retail stocks are light.

Hemlock at Chicago is rather quiet on account of the cessation of building operations, yet the current demand is very satisfactory. A good spring trade is confidently expected. Mill stocks are not heavy, and with yellow pine prices advancing, hemlock is expected to become firmer. At Buffalo the demand for hemlock is better than was expected. Top

Always ready to quote on heavy construction timber, bridge timber, ship timber, etc.

None better at filling your requirements in yard stock.

Cleveland-Sarnia Saw Mills Co., Limited

SARNIA, ONTARIO

prices are expected to hold well until the open season. Prices are not excessive as is shown by the fact that Canadian producers are experiencing difficulty in shipping to Buffalo at a profit.

The yellow pine situation at Chicago is fairly satisfactory. Inquiries have been rather plentiful and orders are expected to materialize shortly. Piece stuff is much stronger and the demand is good. Car material also is in fair demand. Prices are undoubtedly stronger by about $1 to $2 than they were three weeks ago.

At Boston, southern pine business is quiet, but dealers are preparing for higher prices before long. Red cedar shingles at Chicago are quiet at unchanged prices, viz., $3.32 for clears and $2.84 for stars. White cedars are selling fairly well at firm prices. Lath is strong. At Buffalo, shingles and lath are both stronger and the demand is good. Stocks are fair and a good spring trade is expected.

Market Correspondence

Ottawa Valley News—Dry Box Lumber Disappearing

Ottawa, Jan. 27.—Although the month of January was devoted to stock taking more than marketing, lumbermen of the Ottawa valley found business good enough toward the end of the month to send quotations up a few notches for the high grade stock most sought. One inch pine good sidings were in very brisk demand and $50 per M was paid for some lots. There was also active buying in the thicker sorts of good pine sidings and $60 per M was freely paid for 2-inch stock 7-inch wide and up. The market is almost sold out of one-inch good strips, which are quoted at a couple of dollars advance. In a few instances buyers were unable to get supplies and the stores of good pine shorts were drawn upon to meet the demand. Two-inch good strips were a little firmer, too, with a shade advance in price. In sympathy with the buoyancy of these upper classes of stock, No. 2 cuts are firmer. The general rate for them is now given at from $5 to $8 per M.

Shipping cull shorts and strips are maintaining their prices, although the market is better furnished than with better qualities. Both these qualities in two-inch have brought as high as $22 per thousand, but a dollar or two dollars less is usual.

The chief topic among lumbermen is the future of the market for box lumber and mill culls One of the large manufacturers and dealers told the "Canada Lumberman" that dry box lumber was being rapidly reduced and that before spring buyers would have to search before getting all they want. One concern has just disposed of over two million feet at a favorable figure, this being one of the largest transactions in that stock since the market for it became dull. The prospective good demand for box lumber in the spring will likely maintain quotations at their present standing at least. This is a much better outlook than when the mills closed down in the autumn.

The prices of shingles are moving upward despite a reduction in export due to the additional American duty. Some of the Ottawa valley mill owners who had been realizing $4 per thousand on white pine and cedar found themselves unable to do so under the increased customs tax and consequently the trade fell off. Still white cedar XXXX, 18-inch, is now quoted 25 cents per thousand higher than at the end of 1909, and the corresponding brand of white pine is firm at from $3.50 to $4. J. R. Booth is well sold up in the XXXX varieties, which has a strengthening effect on the market.

There is considerable low grade lath in some of the yards, but the prospect is that much of it will soon be disposed of. Inquiry shows that dry lath is rather closely shipped and good quality is scarce. The Ottawa valley is benefitting by the fact that the Georgian Bay stocks were sold out at prices which met the market early, and the docks were cleared there while there were still many well filled yards in the Ottawa district. Contracts for the best white pine lath are being closed at 50 cents advance on last year.

In preparation for a bigger cut next summer the Shepard & Morse Lumber Company are removing two old band saws that have given service for 18 years. They will be replaced by a pair of the newest and latest improved double cut band mills of the Waterous Engine Works Company, of Brantford, Ont. J. R. Booth is also installing one of these saws in the overhauling of his mill. The James Maclaren Company, of Buckingham, Que., which usually closes its pulp mill for a while each winter to make repairs, will not suspen doperations at all this year, so exhaustive were the improvements made last season.

The tendency to construct houses wholly of wood is fast on the decline, as shown by the building statistics of Ottawa just compiled. Out of a total of $4,527,590 in building permits issued in 1909, the value of "wood or frame" structures was only $139,575. During 1908, when the total building permits were only $1,794,000, the value of "wood or frame" structures was $125,000. The value of solid brick or stone buildings last season was $2,762,400; brick veneer, $1,253,840; concrete, $352,075; iron clad, $18,700. There was an increase of 167 permits over 1908, or a total of 683. An impetus was given to construction of tenement rows and apartment houses on account of the excessive demand for these dwellings among the middle classes. The city is now well supplied with them, and unless a rapid growth of population is in sight investors will not put much money in dwellings. Some of the largest buildings started in the past season will not be completed till 1910, and the demand for finishing lumber will not be felt until then. The large manufacturers do not, of course, have to depend on local demand for business. No boom could be great enough to affect them, but the middlemen and small manufacturers see plenty of reason in the easy money market and general prosperity for believing the onward strides of the city will bring about a building season as active in 1910 as in 1909. The municipality voted $10,000 to be spent annually on advertising for industries, and the Ottawa Board of Trade is raising an equal sum to make the city a bigger commercial centre. There is consequently a good prospect for new factories and homes for their employees before long.

The weather of the past fortnight has not been severe enough to suit lumbermen. The roads are poor and the hauling will receive a setback unless early freezing occurs. The work in the woods was almost at a standstill when the cold spell in the early part of January brought relief. Now the reports from the upper Ottawa lumber regions are worse than at any time before this season. The hiring of teams is dull.

Trade Enquiries

The Dominion Government Trade and Commerce reports contain the following trade enquiries. Readers of the "Canada Lumberman" may obtain the names of enquirers by writing us, enclosing stamped envelope and stating number of enquriy:

23. Maple logs and planks—A Manchester firm asks for dimensions and prices of maple logs and planks from Canadian exporters.

31. Spruce deals—A Manchester firm asks for dimensions and prices of spruce deals from Canadian exporters.

32. Pine logs—A Manchester firm asks for dimensions and prices of pine logs from Canadian exporters of same.

28. Pine sidings—A Lancashire firm asks for dimensions and prices of pine sidings from Canadian exporters of same.

34. Birch squares—A Manchester firm asks for prices of birch squares from Canadian manufacturers.

47. Pine lumber, doors, etc.—A north of England correspondent inquires for the names of Canadian shippers of pine lumber, doors and turned goods.

Publications and Calendars Received

The Climax Manufacturing Company, Corry, Pa., have issued an illlstrated catalogue of their patent geared locomotives, which are made for any practical gauge. The catalogue will be of much interest to logging operators. It also deals with the company's excellent logging cars, which are made for any gauge and have a number of special features to recommend them.

The Jeffrey Manufacturing Company, Columbus, Ohio, have issued two interesting booklets, Nos. 33 and 34, descriptive of their wire cable conveyors (33) and standard elevator buckets (34). The booklet upon wire cable conveyors will prove of much interest to lumber and pulp manufacturers, as these conveyors are excellently adapted for conveyings logs, lumber, bundles of pulp, etc.

F. Reddaway & Company, manufacturers of stitched canvas belting and linen fire hose, 56 St. Francois Xavier street, Montreal, have favored the "Canada Lumberman" with a fine large calendar. An interesting illustration on the calendar shows one of their 12-inch "Camel" belts which was installed in April, 1890, and which, although exposed to the weather, is still running and developing from 75 to 100 h.p.

"Clearing Up the Title" is the subject of a fine large colored picture, which decorates the calendar sent out this year by Edward Clark & Sons, wholesale dealers and manufacturers of lumber, Toronto. The painting is a reproduction of an excellent work by Wm. Verplanck Birnly, A.N.A., exhibited in the National Gallery, 1908, and reproduced in Osborne Art calendars. The picture and calendar pad are mounted on a handsome light greyish-blue board.

The Seaman, Kent Company, Limited, Meaford, Ont., entertained their staff and factory hands at a banquet on Friday, Jan. 7th. This was the first of a series of annual banquets and from the success which ttended the occasion it is certain that all who were present will anticipate future similar events with much pleasure. About 150 guests were present and in addition to the good cheer and fellowship, they appreciated greatly an announcement by Mr. Kent that the company was working out a co-operative plan whereby those who had been in their employ a certain number of years would obtain important advantages. The banquet and the toast list were greatly enjoyed by the guests. The speeches reflected the prosperity which the company has been enjoying and indicated a future full of promise.

You'll Have the Business

That 1910 will be a Year of Great Prosperity there is now no doubt. :: :: :: :: ::

Mountain Lumber News Convention

A most successful convention of the Mountain Lumbermen's Association was held at Cranbrook, B.C., on January 14. During the morning the secretary presented his report for the year 1909 and also a number of comparative statements of production and consumption for the last four years. The election of officers resulted in the present officers being re-elected for another year as follows: President, Otto Lachmund; vice-president, Otis Staples; secretary-treasurer, W. A. Anstie.

In the forenoon a lengthy discussion took place upon the subject of grading. No changes were made, but a committtee representing the whole of the interior was appointed to prepare a set of standard rules for grading lumber. Strong resolutions were adopted regarding the necessity for tariff protection against the dumping of American lumber into Canada, and against the proposed insurance bill, which the Canadian fire insurance combine is trying to have passed, whereby premiums on foreign insurance will be taxed 15 per cent.

Secretary Anstie in an interview, after the convention said: that it had been extremely successful from every standpoint and that he had been gratified in being able to report to the members that their aggregate business for the year 1909 was the largest in the history of the mountain lumber industry and further, that the outlook for 1910 promised an even better year, In the evening a most enjoyable ball was given in honor of the delegates, at which the attendance was very large. Much of the success of the ball and of the convention was due to the efforts of the chairman of the reception committee, Mr. A. Leitch.

The annual meeting of the National Lumber Manufacturers' Association of the United States, will be held at New Orleans, La., on April 19th and 20th.

The Canadian Lumbermen's Association Convention

The annual meeting of the Canadian Lumbermen's Association, which is taking place in Ottawa, on February 1, is an event of the greatest importance to the lumber trade. An excellent programme was arranged and a large attendance of representative Lumbermen, from all parts of the country was assured. A detailed report of the meeting will appear in the "Canada Lumberman" of February 15.

In addition to the regular business of the programme, the following interesting features were included for discussion:—

Reference from directors meeting, held October 29th, 1909, regarding organization of credit rating and trade report bureau.

Organization of collection bureau.

Resolution regarding amendments to by-laws R. and Y. with reference to longer notice being requisite for annual and special meetings. (Mr. J. B. Miller).

Terms of sale and discount. (Mr. J. B. Miller).

Issuing of a circular for the retail trade, with reference to being fully covered by insurance, at all times.

Discussion regarding men sent to woods, whose railway fares, etc., have been advanced by the employer, deserting en route.

Odd lengths in lumber.

Trade ethics, as adopted by the American Lumber Trades' Congress at Chicago, June 9th, 1909.

Relations between Manufacturers and Retailers, (Mr. V. R. Marshall).

Settlers, war veterans, etc., occupying timber limits as agricultural lands.

The proposed duty on lumber and shingles, from the United States coming into Canada.

Payment of Directors' and Members' of Committee expenses incurred, in attending meetings.

Campaign Against Insurance Bill Makes Progress

Active preparations are being made in Ottawa to campaign against the proposed insurance bill now before the Senate, which proposes among other things to place a tax of 15 per cent. on premiums with companies not registered in Canada. The sub-committee in charge of the matter recently held a meeting. The secretary read resolutions passed by the Lumbermen's Association, and by the Western Lumbermen's Mutual Fire Insurance Company, which approved of the course being taken. The following committee was selected to take charge of the programme before the Senate Committee at Ottawa: James Davison, Chairman; F. Hawkins, Secretary; B. P. Heaton; A. K. Cameron; John A. Gunn; E. F. Sise; Raymond Willis. The following were selected to speak on behalf of their respective interests: D. C. Cameron, for the Lumbermen; C. M. Bowman, and Francis King, for marine interests; R. M. Ballantyne, and John McKergow, produce; William McMaster, industrials; Joseph Quintal, grain; A. Laporte, wholesale grocers; James Gardner and Mr. Fraser, dry goods; J. W. Flavelle of Wm. Davies Co.; Mr. Gordon of Gordon, Ironsides and Fares, for the packing interests; John Goldie, millers, and Mr. Lindsay of Holt, Renfrew and Co., Quebec. It was resolved to secure as many concrete cases as possible to lay before the Senate Committee.

Burns

A Lumberman from Ottawa Valley writes us as follows:

DEAR SIRS:

The Solid Tooth Saws I purchased from you last spring have been doing first class work ever since. I have never had any trouble with them. The Burns Saws are the best, as they are evenly tempered and will keep an edge longer than any other make of saw used here. Yours truly.

EDGINGS

Ontario

Considerable timbering is being done in Henwood Township, near New Liskeard, Ont., this winter. Among those engaged in the work are Messrs. Robert Coles, George Roach, McChesney, and Irvine.

The Sawyer-Massey Company, Limited, Toronto. Capital, $7,000,000, have been incorporated to carry on business as manufacturers of, and dealers in steam, gasoline and oil engines, and also in timber, wood and metal. Incorporators, J. S. Lovell, accountant, W. Bain, book-keeper and R. M. Coates, all of Toronto, Ont.

The Munn Lumber company, of Orillia, Ont., consisting of a number of Orillia, Toronto and Peterborough gentlemen, are reported to have purchased the entire business of the St. Anthony Lumber company, of Whitney, comprising the mills, railway yards and limits, a large part of the latter being situated in Algonquin Park.

The Fort Frances Lumber Company's contract, which was awarded by the city under the impression that it was lower than it actually was, has been ratified by the board of control. The wrong impression was conveyed by an error in copying made in the city engineer's office. But even after being rectified, the tender remains the lowest received by the city.

Contracts were recently awarded in Toronto for electric light poles at the following prices: 30-foot, $2.35; 35-foot, $3.90; 40-foot, $5.25; 45-foot, $6.50; 60-foot, $9, and 65-foot, $11 each. Pine lumber was contracted for at $23.37 a thousand for inch and 2-inch lumber and $25.37 for 3-inch lumber. Hemlock of the same dimensions was contracted for at $18 to $20.37 a thousand.

Eastern Provinces

J. A. Gillis, of Gillis and Wall, Lumber Merchants, Halifax, N.S. is stated to have assigned.

It is reported that negotiations are in progress between Curran Brothers and the Swedish Canadian Lumber Company, for the purchase by the latter of the former's large sawmill and lumber business in Rexton, Kent, N.B.

The Nepisguit Lumber Company, Springfield, Mass., have awarded the contract for large Corliss and Tangye engines, 1,200 horse power, for their new mill at Bathurst, N.B., to Mr. Herbert Evans, of the Leonard Company,

It is reported that Mr. J. W. Logan, the well-known hardwood lumber manufacturer of Earltown, N.S., may lease the mill of the Canada Iron Corporation at Folly Lake. Should he do so, he will run both mills. Mr. Logan was at Londonderry recently.

W. H. Rowley and G. H. Milton, joint managers of the E. B. Eddy Company, at Hull, Que., are contemplating the location of branch factories in the West. Fort William and Winnipeg are being considered. Mr. J. B. Persse, is Winnipeg representative.

It is reported that a deal has been closed by which the firm of S. St. C. & H. Jones, Weymouth, N.S., have obtained possession of the Douglas property at Caledonia, N.S., and that the purchasers have already commenced working the property. It is understood that the price paid was about $20,000.

It is stated at St. John's, N.B., on good authority that Farnsworth and Jardine, of Liverpool, are negotiating for the purchase of the Bank of Montreal's interest in the business of the Alex. Gibson Railway and Manufacturing Company and if the deal can be arranged they will shortly assume entire control of the property.

The water power in the Rouge River at Huberdeau, P.Q., has been sold to the Arundel Lumber Company, Limited, of Ottawa, for pulp development purposes. A head of 26 feet can be obtained and about 2,500 horse-power and the company owns limits in the river sufficient to supply the mill. Mr. W. E. Bradley, C.E., of Montreal, was instrumental in putting the deal through.

Western Canada

Logging is active in the Kootenay, and the Yale-Columbia Lumber Company wants 12,000,000 feet.

H. Joyce, Quesuel, B.C., has purchased a sawmill which he will locate at Quesnel, early in the spring.

The large mill at Genoa Bay, B.C., has been put into running shape, and a number of improvements have been made to the plant.

The Huntting Lumber Company's mill, which was burned some time ago, will be rebuilt on Burrard Inlet, a site having been secured near Barnet, B.C.

J. H. Latremouille has secured a splendid mill site on Newikalliston Creek at Little Fort, B.C., and in the spring will install a sawmill at the Fort. He will do custom work as well as sawing lumber for sale.

J. Reid's implement warehouse and the office of the Beaver Lumber Company, at Deloraine, Man., were destroyed by fire on January 22. The loss will be about ten thousand dollars; well covered by insurance.

A sale has been concluded whereby 16,640 acres of timber on the Cheakamus River, B.C. have become the property of the Detroit-Vancouver Timber Company. The sale was negotiated by Mr. Percy Frazier of Frazier and McNair, real estate agents, Vancouver, and Mr. J. F. Reed, of Seattle.

J. W. Hargrave, of the firm of J. G. Hargrave and Co., Winnipeg, who is in charge of the firm's wood camps along the C. N. R., reports that operations in the bush are progressing satisfactorily but are rendered somewhat expensive owing to the great depth of snow throughout the entire district.

J. G. Robson, of New Westminster, B.C., after experimental shipments via the Tehuantepec to the eastern states, has shipped 500,000 shingles by the Lonsdale to Mexico en route to the Atlantic coast. He used to ship by rail but finds he can save about 40 cents per thousand by the southern route.

The French barge Empereur Menelik is loading at Chemainus for Australia. She has already taken on at Seattle 300 tons of California redwood to be used as ballast instead of sand. The experiment of taking wood for ballast on deep sea voyages is being watched with interest by the shipping men.

Letters patent have been issued incorporating Daniel E. Sprague, lumberman; Alice W. Sprague; Harold C. H. Sprague, lumberman; Daniel B. Sprague, lumberman; and John D. Sinclair, lumberman, of Winnipeg, under the name of Sprague Lumber Company, Limited. The capital stock is placed at $1,000,000.

The McInnis Lumber Company, of Edmonton, Alberta, secured a contract from the Colfax Northern railroad for 340,000 ties, 500,000 feet of hedge timber, 150,000 feet culvert timber and 140,000 feet of fence posts. This is one of the largest contracts let recently and 400 men will be employed until spring, when the lumber is expected to be delivered.

The Manitoba Gazette gives notice of the incorporation of the J. J. Crowe Company, Limited, Newdale, Man., to acquire, manufacture and deal in lumber, pulp, brick building and construction materials, and supplies. Capital, $20,000. Incorporators, J. J. Crowe, lumber merchant, Newdale, R. J. Gourlay, manager, J. B. Sinclair, secretary, both Winnipeg, Man.

Application isw being made to the British Columbia Legislature for the incorporation of a company to build and operate a standard gauge railway, either electric or steam to carry logs, timber and lumber, goods and merchandise from Menzies Bay, Vancouver, by the most convenient route to the junction of the Salmon River and Memekay River and from Menzies Bay to a point on the Quinsan River.

The sailing vessel William H. Smith which recently left Victoria with a cargo of one and a quarter million feet of lumber loaded at Chemainus for Port Natal, was found dismasted and drifting ashore by a passing steamer a few days later near, the mouth of the Columbia River. Assistance was sent to the disabled vessel and she was finally towed into port at Astoria, after having lost a considerable portion of her deck load.

An extensive addition to the premises of the Cameron Lumber Company, Victoria, B.C., is reported to be under consideration. The company find that the extension is necessary on account of their growing business. They have purchased three acres of water front property to the north of their present property, and a large addition to their yard room has also been secured. The company have also recently installed additional machinery.

Portions of the Dominion timber leases of various lumber companies will be flooded as a result of the building of the dam of the Western Canada Power company, of Stave Lake, B.C. In consequence, the Dominion government has notified them that the timber thereon must be removed before April, 1911. To this several of the companies have replied that the time is inadequate. Several homesteads in the same area will also be inundated by reason of the building of the dam.

Edward Brown, formerly of Portage la Prairie, Man., has paid $65,000 for the unsold stock of the North Star Lumber Company, whose properties are principally in the East Kootenay, B.C. The directors of the North Star Lumber Company are: John Hanbury, of Brandon; and J. A. M. Aikins, R. T. Riley, Andrew Kelly and W. A. Windatt, Winnipeg, The sale was carried through by O'Grady and Anderson, brokers, Winnipeg.

Negotiations for the sale of the Canadian Pacific Lumber company's mill at Port Moody, B.C. are reported to be under way between the owners and Messrs. Meredith and Irwin, who are largely interested in the Anglo-American Lumber Company of Vancouver. Details concerning the transaction are not at present available, but it is reported that matters have progressed so far that the intending purchasers have made arrangements to take over the operation of the mill immediately, and it is expected that the transfer will be formally effected within a short time.

A coroner's jury at Winnipeg found that Andrew Coleman died as a result of exposure, and that his death was due to carlessness on the part of John Comlins, who was in charge of a party of laborers en route to Comlin's camp. The evidence showed that the laborers arrived with a number under the influence of liquor, and started on an eight-mile march to the camp from Darwin. The deceased strayed at dusk, falling a few feet from the road, where he was found frozen stiff in the morning by volunteer searchers. It did not appear that Comlins made any effort to find the missing man. Comlins was arrested on a coroner's warrant, charging him with manslaughter.

A new sawmill of 60,000 feet capacity is being erected at Galloway, eight miles from Elko, B.C., on the Crow's Nest Pass railway, the owners being the Crow's Nest Pass Lumber company, with headquarters at Wardner, B.C. The mill is being equipped by the Waterous Engine Works, through their western manager, Mr. H. B. Gilmour, of Vancouver. It will have gunshot feed, niggers, kickers, log loaders, heavy edger, slab slasher, trimmers, lath machinery, and a full set of conveyors. The plant will be ready to commence cutting about the 1st of March. This will make the third mill operated by the Crow's Nest Pass Lumber Company —No. 1 at Wardner, 150,000 feet daily capacity; No. 2 at Marysville, 40,000 feet daily capacity; and No. 3 at Galloway.

In pursuance of its new policy of selling by auction, timber lands within the railway belt, the B. C. government, through its agent Mr. James Leamy, held the first public sale in the history of British Columbia on January 9th. The timber lands consisted of 14,400 acres near the confluence of the Lillooet and Pitt Rivers, situated a few miles north of the Canadian Pacific tracks, where the latter cross the Pitt River. The timber went to Mr. J. C. Shields, representing the Independent Lumber Company of Regina, a large concern, which already is owner of a number of crown-granted timber areas in the Westminster district. The price paid was $24,000. This was reached after lively bidding, in which Mr. Shields and Mr. William Holden of Vancouver were the chief participants. The upset price was $5770.

The B. C. Gagette gives notice of the incorporation of the following companies: The Canadian Lumber Company, Limited, capital $150,000; The B. C. Lumber Manufacturers' Agency, Limited, $50,000; The Canadian Cedar Lumber Company, Limited, capital $50,000; The Enterprise Timber & Trading Company, Limited, capital $10,000; The East & West Lumber Company, Limited, capital $50,000; Eburne Sawmills, Limited, capital, $200,000; The Sidney Manufacturing Company, Limited, incorporated to take over the building, lands, etc., of the Sidney Sash & Door Factory (unincorporated) at Sidney, Lumby Sawmill Company, Limited, capital, $25,000; Kernaghan Lumber Company, Limited, capital, $25,000; Warwick Shingle Company, Limited, capital, $100,000; World Building, Limited, incorporated to build, equip, furnish, etc., mills, warehouses, capital, $300,000; The B. C. Lumber Manufacturers' Agency, Limited, capital, $50,000; The Sidney Manufacturing Company, Limited, incorporated, to carry on the business of furniture, sash, door, lumber and general wood-workers and building business; Fort George and Alberta Telephone and Electric Company, Limited, captital, $250,000; B. C. Fir and Cedar Lumber Company, Limited, capital, $200,000; The Gordon Pasha Lumber Company, Limited, capital, $30,000; Western Canada Bag, Envelope and Boxboard Company, Limited, capital, $250,000.

MANUFACTURERS OF QUALITY LUMBER AND SHINGLES

Many are called— but few get up

Just so in the manufacture and sale of lumber—

Many make goods— but few make good

which leads us again to remind you that our "Quality Lumber and Shingle products" are all manufactured and sold under our strict personal supervision and with a full appreciation and regard of the requirements of the strictest retail buyer.

Quebec Spruce The same good uniform grades. The same dry stock. You know it!

White Pine Nice knotted, well graded "Tonawanda grades," dry stock. Something with the Fenderson reputation behind it. We want you to know it!

Logging Locomotives

Designed for all round service in logging operations. The minimum number of moving and wearing parts insure low up-keep cost, and their short rigid wheel base make them suitable for roads with sharp curves and uneven tracks.

Finished, interchangeable repair parts always on hand.

The Shimer Cutter Heads and Special Tools

Cost Reduction

Business men everywhere are giving attention to reducing cost of manufacturing by installing labor-saving and time-saving tools.

The Shimer Cutter Heads remove many of the troubles and worries incident to the business of the machine woodworker and place in his hands the power to increase his productive capacity in the manufacture of flooring, ceiling, siding, wainscotting, door and sash patterns, etc., besides saving much of the material that formerly reached the offal pile.

Look over this page carefully, or examine our catalogue and see if there is not some tool you need to help in the work of cost reduction. If your work is special write us about it. Almost every week we adapt the Shimer Cutter Head to the making of Specialties, or design some new fixture to further its usefulness.

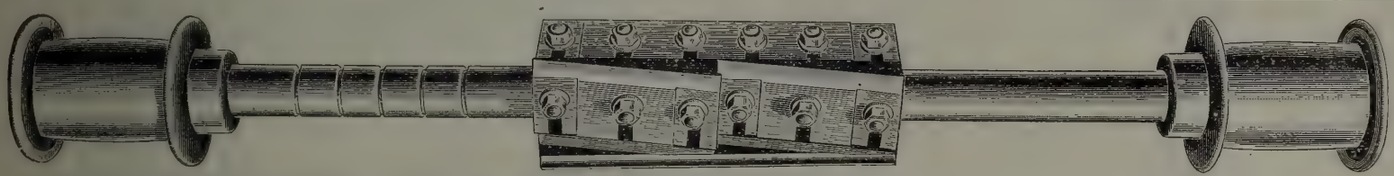
Expanding Dado Heads

These tools are arranged with Circular Bits and saw spurs for edging up the square shoulder of the groove when cutting across the grain of the wood. The Bits will expand to nearly double the thickness of the narrowest groove they make, and with wider or thicker Circular Bits their range of expansion is readily increased up to 2" or more. We make them to fit any saw mandrel, long or short. Price, complete, 8" diameter or less, net, $21.45.

Filing Stand and Tracker

This is a neat little device to fasten to a work bench for holding a Head when filing the Bits. It holds the Head with a stub spindle and is better than the ordinary pinch vise which, in time, mars the surface of a Head. The Tracker Attachment sets the Bits to share alike in the cutting.

Price, plain Filing Stand...$ 4.87
Price, Filing Stand with Tracker 11.37
Price, Extra Stub..... 1.00



In ordering give the number stamped on your Shimer Cutter Head.

The Shimer Cutter Head for O. G. Batten and Siding

These heads are especially designed to work O. G. Batten or O. G. Siding, having three circular cutters in line of the cut, seated and firmly bolted to one side of the head flange.

We make them to suit any matcher or moulder. They turn out O. G. Battens as regularly as our matcher heads work tongue and groove flooring. Give measurements same as for flooring heads; or, if flooring heads are already in use on your machine, give their record numbers, and send a cross section of the batten—wood sample or drawing.

Price for each Cutter Head, without bits, $9.75. O. G. Batten Bits to mould ¾" deep or less, net each, $2.08.

The Shimer Shear Cutting Cylinder

Made to fit any Planing and Matching Machine, Saves Power, Material and Labor, besides putting a smooth surface on the lumber. The cut is made with first one knife shearing the chip in one direction across the face of the board, and is followed by the next knife which shears the chip in the opposite direction. This distribution of the work reduces jars on the machine and belts, gives smooth action, and results in better work.

Send for further information, and let us quote you prices. With your inquiry give us the length and diameter of your cylinder, stating whether you use one or two drive pulleys.

Panel Raiser Heads

We are putting out an excellent tool that will work nicely on any panel raising machine with vertical spindles. It is made in two sections, the one having a central hub, upon which the other section is slidingly mounted and fastened with a set screw. The knives for Jointing extend from the flange on one section to the other, held by means of special dovetail shoulders which encircle each knife near its ends. It carries a heavy shearing cut, and works smoothly across end of panel as well as with the grain.

Price, each Head with Bits complete, $18.20

Box Board Matcher Heads

The Shimer Cutter Heads for Box Board matching will make a uniform cut and a close fit in every instance, as well after years of use as when the Bits are new. There is no friction upon the Bits, therefore no loss of power, no waste of material. The Bits can be expanded for thicker material, with corresponding change in the thickness of the tongue and groove.

Price for two Cutter Heads with 4 Bits each complete to match ⅝ to ½ inch, $29.14.

We also furnish when desired a Yoke Mandrel with self-oiling boxes, boxed f. o. b. Milton, Pa., for $11.05.

The Shimer Cutter Head for Matching Reversible Glue Joints

turns out a most satisfactory fitting of the tongue and groove, interlocking from the same piece of matched material, requiring but one Head with Bits to produce. The jointed material will fit together when the pieces are sawed to length by simply turning the one piece end to end.

Glue Joints must depend upon accuracy as well as permanency of pattern. We guarantee both.

Prices range from $15.54 to $17.30 for a four bit Head, and from $19.95 to $22.60 for a Head with 6 Bits complete.

The dealer who accepts your order for the Shimer Cutter head and supplies you with another means to deceive you in no small matter Look for the Name and Trade Mark "The Shimer Cutter Head" stamped on every genuine tool. Any other is spurious—send it back—demand the genuine, of quality and helpfulness, with a record of 40 years of upbuilding and improvement. It costs no more.

Herbert Smith, Manager

We could tell you some very good stories

but we would prefer to show you how to reduce the cost of lubricating your plant by the use of "PURO LUBRICANTS" and our "SPECIAL GREASE CUPS and BEARINGS." "Puro Lubicants" cannot be wasted by the oilman's special friend, the carless workman. Will save you 50% on the cost of lubrication and 100% on the cost of application. Has a melting point so high as to cling to hot bearings until ground up and worn out.

For application on stationary bearings use plain pressure cup, on bearings in motion use spring pressure cup, for line shafts and special bearings we have our special cup. When inquiring state whether pipe or bolt thread is required on shank, also size of shank.

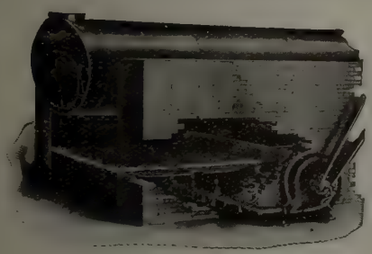
BERLIN MACHINE WORKS, LTD. - Hamilton, Canada

Results Are What Count

A Combined Skidding and Loading Machine that will clear up the largest area at a setting and can be moved and set up ready for business in the shortest possible time will get the best results. The latest Russel machine has some distinct improvements that save time and trouble, consequently money. Note the new method of suspending skidding sheaves, they are hung from a vertically hinged jib or triangle, the outer end of which is guyed by two lines one on each side, which are power-tightened and can be set while skidding lines are going out. The guy lines lead back so they do not interfere with skidding or loading.



The uppermost leg of this jib has a spring connection to the tower that reduces shocks.

All strains due to skidding are absorbed by the guy lines. The swinging boom is operated by wire ropes passing through sheaves suspended from a steel frame projecting from tower and leading to two drums on loading engine, controlled by one lever. Machine s raised or lowered by hydraulic or patented geared jacks. Built for 2 or 4 lines, with stiff or swinging boom, constructed entirely of steel, except loading boom.

This machine is without question the strongest and fastest machine of the day.

RUSSEL WHEEL & FOUNDRY CO., Detroit, Mich., U. S. A.

The Gordon Hollow Blast Grate

The Heaviest, Most Durable and Most Efficient Blast Grate on the Market

Pays for Itself in One Week

"The Gordon Hollow Blast Grate saved us enough on FUEL the FIRST WEEK to PAY FOR ITSELF, BESIDES increasing the cut of our mill by ONE-HALF."—Kingsbury & Henshaw, Antigo, Wis.

Adds from 25 to 50% to the Efficiency of a Boiler

"We installed your Hollow Blast Grate System in connection with our saw mill boilers several months ago. We were VERY SHORT OF STEAM at that time, and were undertaking to burn considerable WET CYPRESS DUST from our shingle mill. After installing the Hollow Blast Grate System we HAD NO FURTHER TROUBLE with our boilers' steaming. We are getting AT LEAST 20% MORE STEAM and could possibly push them to 25% MORE. We consider the Gordon Hollow Blast Grate one of the BEST INVESTMENTS we ever made."—Aycock Lumber Co., Aycock, Fla.

"The blast grates you sold me at Sylvania, O., INCREASED OUR STEAMING CAPACITY 50%, and enabled us to make plenty of steam in the winter time from FROZEN SAWDUST."—R. C. Gillett, Waverly, Va.

Gives as good results with wet, green or frozen saw-dust as a Draft Grate gives with dry wood

"We have used your Hollow Blast Grates CONTINUOUSLY since they were installed, which we believe was about FIFTEEN YEARS AGO (The actual period was 16 YRS. 8 MOS. G H. B. G. Co.) Prior to that time we were compelled to SEASON our fuel—the best of WOOD—to have a grade that would make us sufficient steam to keep our plant running, and EVEN THEN were compelled to stop at times during working hours to raise steam. After putting in your grates we make a sufficient amount of steam WITHOUT TROUBLE, using GREEN ELM DUST. The grates are apparently in AS GOOD SHAPE AS WHEN INSTALLED, and we consider them A WONDERFUL INVENTION."—G. V. Griffith & Son, Albany, Ind.

Saves Labor in Firing

"Your grates have effected a saving of about ONE-HALF in LABOR in the fire-room, and while using nothing but SAWDUST and GREEN MILL CLIPPINGS, have given us FULLY 33⅓ PER CENT. HOTTER FIRES."—The Ohio Wheel Co., Delphos, O.

Is Practically Indestructible

"I used your Hollow Blast Grates at stave mills at different points for some TWENTY YEARS, and they are JUST AS GOOD AS WHEN PUT IN, and I can burn any WET BARK AND REFUSE that otherwise COULDN'T BE USED AT ALL. They are the cheapest grate one can use, for they NEVER BURN OUT."—S. P. Shelly, Holgate, O.

The men who have made the Gordon Hollow Blast Grate what it is—our president, our secretary and treasurer, our superintendent, our foreman and our designer—have all been identified with the business since the company was organized, while our vice-president has been with us for fifteen years.

Our services are, therefore, those of experts.

THERE is no machine that is more profitable around your plant than a first-class freight elevator. It makes space in the upper floors just as valuable as space on the ground floor, and solves the perplexing problems, which constantly arise, where there is no elevator installed.

We manufacture freight elevators of every description and of all capacities, and we guarantee our elevators to be better than anything on the Canadian market.

We are an independent Company and sell our elevators at independent prices, and this accounts for our rapidly increasing business and pleased customers.

If you have not room enough in your factory for an elevator, ask us to submit plans for placing one on the outside of the building.

The cheapest way to skid and load logs is by steam power. The

Universal Logger

is a combined two line skidder and loader with separate engine for loading with steel skidding boom and steel swinging loading boom.
It is self-propelling, spots its own cars and moves rapidly from point to point, saving time and the usual switching expense.
Ample water tank capacity is located between the trucks, and the frame is constructed to permit empty cars to pass through the machine for loading by means of its own power.
This machine is especially adapted for light steel or wooden rails.

Mowry's Jumbo Edger and Gang

Separate or Combined

THIS IS ONE OF THE BEST MACHINES manufactured in Canada. We have sold quite a number of these machines and have some splendid recommends for them. Mandrel is 4½ in. diameter by 10 ft. 6 in. long. Drive pulley is 20 in. x 20 in. The machine is five feet seven inches inside of frame. It has two water boxes. Two stationary and two movable saws (or more if desired). It has eight stationary saws for the gang side (or more if desired). It will rip up cants to eight inches thick. Take a slab off two sides of your small logs and run the log through the "Jumbo" and it will come out in boards. It is impossible for the cant to fly back. It has reverse gear so that if a cant binds the operator can touch a lever and run the log back. 24 in. or 26 in. saws are used. Prices quoted on application, with or without saws.

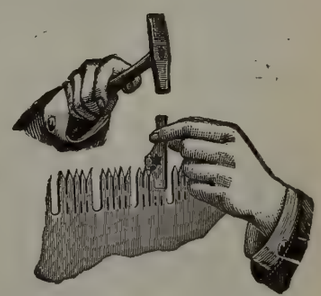
This Saw Stands Without a Rival

AND IS THE

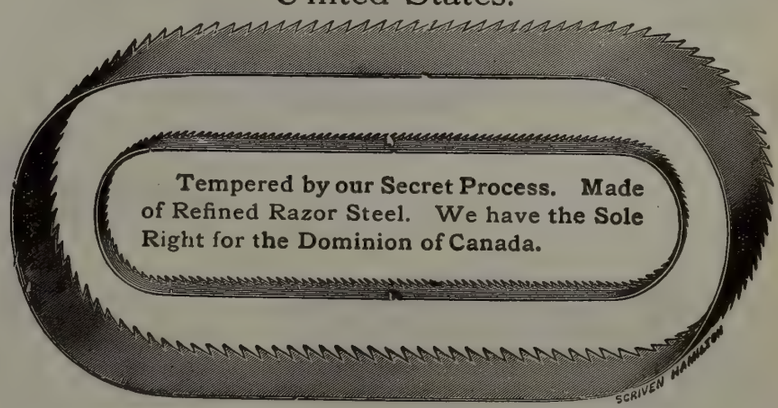
FASTEST CUTTING SAW IN THE WORLD!

Its Superiority consists in its Excellent Temper. It is made of "Razor Steel," which is the finest ever used in the manufacture of Saws. We have the sole control of this steel. It is tempered by our secret process, which process gives a keener cutting edge and a toughness to the steel which no other process can approach.



Maple Leaf Saw Set

MANUFACTURED BY

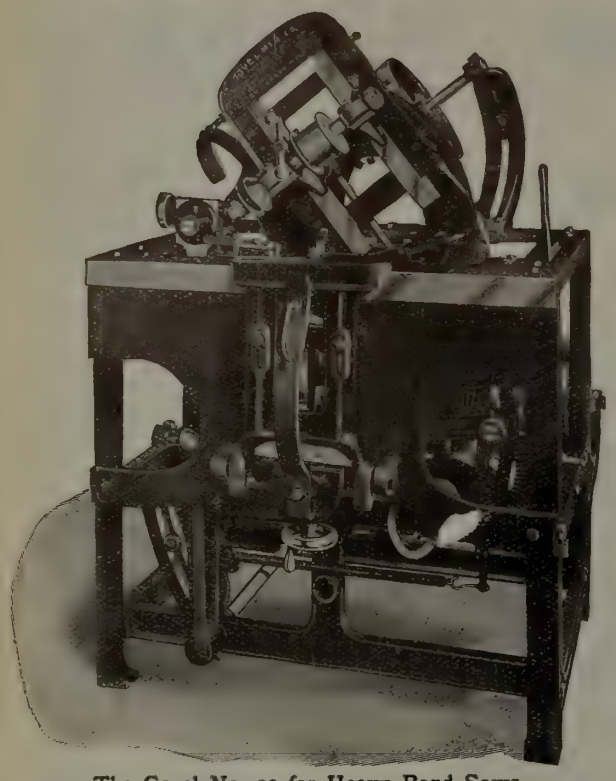


SHURLY & DIETRICH, Galt, Ont.

Directions.—Place the set on the point of tooth, as shown in the accompanying cut, and strike a very light blow with a tack hammer. If you require more set, file the tooth with more bevel.

If you follow directions you cannot make a mistake. Be sure and not strike too hard a blow, and it will set the hardest saw. **On receipt of 40 cents we will send one by mail.**

We are the only manufacturers in the world who export Saws in large quantities to the United States.



We Manufacture

HIGH GRADE BAND SAWS

Of All Widths and Lengths.

These Saws are made of Refined Razor Steel, and tempered by our Secret Process; for Fine Finish and Temper are not excelled.

We Make All Kinds of Machinery and Tools for the Care of Saws

"Hanchett" Circular Swage Shaper

A very useful tool in every filing room is the "Hanchett" Circular Swage Shaper. It combines all the necessary qualities for the giving of a perfect finish to the work of the saw swage. By its use every tooth is pressed into perfect shape, as in a mold widest on face, widest at extreme points, tapering downward from the points and backward from the face. In this manner a perfect shape and a perfect clearance is obtained and the shape of all the teeth is absolutely uniform.

The "Hanchett" Circular Swage Shaper is adapted for side dressing log, shingle and small circular saws, and makes the successful cutting of good smooth lumber possible. The shaper is easily adjusted to the circular saw. When the saw swage has done its work, it is removed from the pin and the shaper is substituted. Simplicity and speed are distinctive qualities of the shaper. From 30 to 40 teeth per minute can be dressed with it.

"Hanchett" Adjustable Circular Saw Swage

That filers everywhere appreciate a good machine, has been demonstrated to us by the phenomenal success of our swages. The "Hanchett" Circular Saw Swage is easily the most desirable in the market. The special points of excellence that are combined in this machine are: Simplicity of Construction, Great Speed, Ease of operation, Perfect adjustment, Remarkable durability.

LET US SEND YOU OUR NEW CATALOGUE NO. 6. LARGE, UP-TO-DATE, INTERESTING. TELLS ALL ABOUT MODERN FILING ROOM EQUIPMENT.

Because of the trouble arising through the manufacture of imperfect parts by outside parties, we have adopted as a trade-mark the name "Hanchett," so that our customers can prevent themselves from being imposed upon by being supplied with inferior parts. and hereafter all our dies, clamp screws and anvils will be stamped with this name "Hanchett," and if any of our customers receive these parts without our name stamped upon them, they may know at once that they are not genuine, and they should be returned and the proper parts secured from us.

We absolutely guarantee our swages and all swage parts, and any part furnished by us which fails to be perfect in every respect, both in workmanship and material, will be promptly replaced by us without charge.

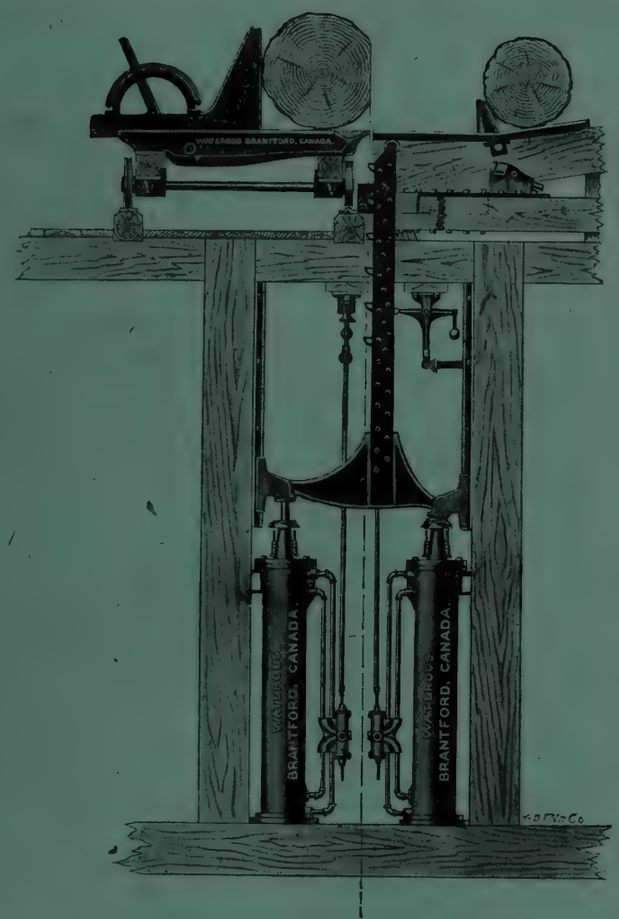
Steam Actuated



Single and Double

Log Deck Machinery

Our Stationary Niggers are built single and double cylinder, in sizes to fill the requirements of any mill.

The Cylinders are provided with steam ports instead of outside pipes, thereby avoiding leaky joints and loss of steam. They are made 8 in. and 10 in. in diameter, cast especially strong where necessary.

Valve Gearing and Valves of a newer and stronger design. Steam is admitted through a check valve, which regulates the exhaust to provide a steam cushion to the piston at both ends of the cylinder. This eliminates any danger of the cylinder heads being forced out by the piston. The valves operate easily and quickly by one lever only. Valve travel is short and the same distance in each cylinder.

Guide Rods of forged steel shafting, same diameter as piston rods, are carried with one end attached to the upper cylinder head to make the machine more rigid and self contained.

Cross Heads, extra heavy, bored to fit piston rods and guide bars, and provided with patent improved oiling arrangement.

Nigger Bars of cast and wrought steel, wider and stronger than the old style bars, fitted with forged steel teeth, hinged to drop back out of the way as the bar recedes.

New Spring Cushion Floor Plate, extra heavy, constructed to take up shock of the bar on the spring cushioned end pieces. All Cylinders and Valves are **thoroughly tested** before shipment.

NOTE: The accompanying cut has been used merely to show the general arrangement of our Stationary Nigger, as the cuts for our new Nigger, described above, are still at the Engravers.

We Manufacture a Complete Line of

Niggers

Combination Gang Edger

On this machine you can put cants up to 8 inches thick through a cluster of saws and do your edging at the same time.

It is also largely used for making flooring from small cants.

It helps you solve the small log problem.

On one side there is a battery of as many fixed saws as required, and the other side is arranged as an edger with movable and stationery saws.

Both the feed and press rolls are divided and the feed rolls on gang side can be run at any speed independently of speed of edger rolls.

There are two driven fluted feed rolls in front and two in rear of saws.

The top press roll behind saws is driven and is equipped with safety device so that lumber cannot fly back.

QUALITY

We feel sure there are none who can excell us in Interior Finish, Doors, Sashes, Casings, Box Shooking, Cratings, etc. We manufacture from lumber from our own limits.

Our Hardwood Flooring is made accurately, being supervised by experienced men. When your customers once order our flooring from you, they will want to get it always.

Pine Doors

We have long appreciated the fact that price is not the only requisite a dealer must seek in placing his order for doors. Poorly manufactured doors can scarcely be considered a bargain at any price.

Door Making is our Specialty

We have equipped our plant with the best door machinery made, and we are turning out doors that **are right in quality and right in price.**

Our doors need no commendation. They prove themselves. They are business builders for every dealer who handles them.

If you have not received our latest quotations on Doors, Sash, and Interior Trim, write us to put you on our mailing list. It will be mutually advantageous.

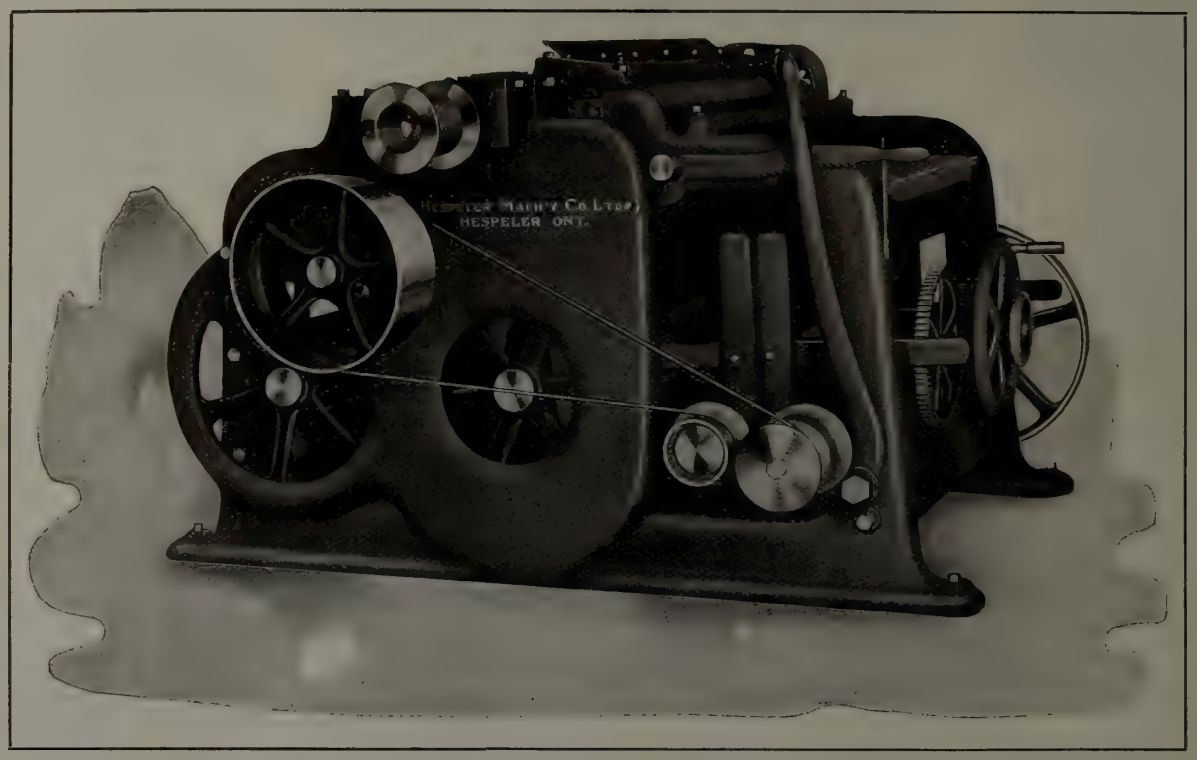
Logging Locomotives



Designed for all round service in logging operations. The minimum number of moving and wearing parts insure low up-keep cost, and their short rigid wheel base make them suitable for roads with sharp curves and uneven tracks.

Finished, interchangeable repair parts always on hand.

Montreal Locomotive Works, Limited

Bank of Ottawa Building, MONTREAL, CANADA

Furniture manufacturers everywhere take off their hats to the improved Cabinet Planer of the Whitney Type

That the Whitney type of cabinet planer is **the acknowledged leader in its class,** hundreds of successful manufacturers of fine woodwork in America and Europe will gladly testify.

We are building this type machine on the advice of some of the largest furniture manufacturers in the United States, one especially whose advice is that "irrespective of all other machines manufactured and offered on the American market, this machine stood in a class by itself, and that their policy was to buy this class of machinery and forget all about the price as soon as possible, as a good machine was cheaper at any price and Furniture Factories by consulting their own interests could not afford to use anything else."

The improved cabinet planers of the Whitney type which we are building mark the extreme limit so far reached in economy, durability, regulation and smooth running. These machines are made in three sizes, 30, 36 and 45 inches in width. They are at all times in stock or under construction, and can usually be shipped **within one week from receipt of order.**

Among recent sales made was one 36 in. cabinet planer to Tudhope Carriage Co., Orillia, one 36in. cabinet planer to The Spiesz Furniture Co., Hanover, and one 36 in. cabinet planer to The Hanover Specialty Company, Hanover.

We also manufacture a standard line of Surface Planers, Planers and Matchers, Combined Planers, Matchers and Moulders, Moulders, Buzz Planers, or Jointers, Mortisers, Tenon Machines, Sash and Door Clamps, Shapers, Band Resaws, Self-Feed Rip Saws, Saw Tables, Band Saws, Borers, Sanders, Etc.

T. FRANKFURD STORY, 96 AGNES STREET ST. HENRY **MONTREAL, P.Q.**

LONG DISTANCE TELEPHONE

We could tell you some very good stories

but we would prefer to show you how to reduce the cost of lubricating your plant by the use of "PURO LUBRICANTS" and our "SPECIAL GREASE CUPS and BEARINGS." "Puro Lubricants" cannot be wasted by the oilman's special friend, the carless workman. Will save you 50% on the cost of lubrication and 100% on the cost of application. Has a melting point so high as to cling to hot bearings until ground up and worn out.

For application on stationary bearings use plain pressure cup, on bearings in motion use spring pressure cup, for line shafts and special bearings we have our special cup. When inquiring state whether pipe or bolt thread is required on shank, also size of shank.

Soo Line Logging Tool News

Soo Line Cant Hooks, Peavies and Lug Hooks

Soo Line Swamp Hook

Loading Block

Evener D

Do you know that we have been constantly improving all lines of Logging Tools, and we have added many new lines. We make the largest variety of Loggers' Supplies on the market. We illustrate one of our Loading Blocks which sells for a dollar and a quarter, sheet steel shell, reinforced with iron billett, through which swivel is riveted. Heavy Link and Grab Hook, Solid Iron Sheave, either for rope or chain. Hole in sheave is drilled not cast rough. Special 5/8 in. Steel Bolt. Our new 1910 Catalogue will be ready for you in a few weeks and you'd better get one. Don't place your orders for Peavies, Pike Poles or extra Handles until you investigate our line, nor don't be afraid to ask for free samples, sent by prepaid express.

Select Maple, Elm or Hickory Handles

TERMS OF SUBSCRIPTION:

Canada, United States and Great Britain, $2.00 per year, in advance; other foreign countries embraced in the General Postal Union, $3.00.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For Manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Vol. 30 Toronto, February 15, 1910 No. 4

License Owners' Troubles

At the banquet of the Canadian Lumbermen's Association at Ottawa one of the most significant remarks made by the speakers was that by Mr. Thomas Southworth when he was referring to the matter of the relation of the Governments of Ontario and Quebec with the owners of timber licenses. For some time it has been a source of loss and worry to the license owners that the Government permits settlers to enter their limits and cut lumber from large portions of the land. This lumber is not cut by way of bona fide clearing. If it were, the license owner could have no great objection to make, for the settler, if he were a permanent resident of the district, would be a benefit to the license owner. As it is, however, the reverse is the case. The settler, so called, clears the timber and sells it to the license owner. Then, in many cases, he finds that he cannot obtain a living on the cleared land and he goes to a new district. The license owner has to pay twice for the timber and receives no benefit from the presence of the settler.

Mr. Southworth was for many years in charge of the Ontario Government's colonization work and is in close touch with the situation He is also president of the Canadian Forestry Association, and as such has studied the situation from its other aspect. When, therefore, he said that he believed the representatives of the Canadian Lumbermen's Asscciation should have little trouble in obtaining a hearing from the Quebec and Ontario Governments and in coming to an understanding with them which would permit of forestry being practised on the limits by the lumbermen, the members present felt encouraged to take a view of the situation which they had not formerly believed to be reasonable

The license owners of Ontario for a long time have not believed that the Government was treating them fairly. Having purchased their licenses they believe that they should be protected in their possession of the timber. Under cover of a colonization policy the Government have permitted them to be preyed upon by mock settlers. Under such conditions it is not to be wondered that the license holders have not felt any encouragement in the matter of reforestry. If they felt that the Government would protect them from settlers and assist them in the prevention of fire caused by settlers and others upon the limits, they would in many cases be ready to consider the matter of reforestry. The lumbermen themselves are the logical ones to undertake any reforestry work. They are acquainted with the actual conditions prevailing upon the limits, and their interests are the interests of the country as a whole With the assistance of the Government they would see that the benefits to be reaped from a scientific policy would be advantageous both to themselves and to the country. Without the assistance of the Government they can do nothing. They do not know where they stand. The Government receives from the limit owners of Ontario about $4,000,000 annuall,, and in consideration of this sum they have a debt which they owe to the people of Ontario and to the license holders, both to encourage forestry and to practise it.

The speech delivered by the Hon. Clifford Sifton at the same banquet was a forcible evidence of the importance of this matter. Hon. Mr. Sifton declared that after a long acquaintance with the northern section of Ontario he had come to the conclusion that much of that country was suitable for timber growing only, and that it should be used for that purpose and no other. He could imagine no greater crime, he said, than to allow settlers to enter land which was fitted for no other use than growing timber. Not only were these settlers a drag upon the country, but their own lives were wasted because they were placed upon land which could not give them a living. With the words of the Hon. Mr. Sifton and the advice given by Mr. Southworth to encourage them, the license owners of Ontario should lose no time in canvassing the situation carefully. They should come together at the earliest opportunity and discuss the feasibility of approaching the Government with a statement of the situation as it appears to them. The Governments of Ontario and Quebec have shown themselves to be keenly concerned about the future of the timber resources of their prvoinces. They have men in charge of their forestry departments who are capable of dealing with the subject in a scientific manner, and it seems as though the present were a peculiarly fitting moment for all concerned to come together and see if the present unsatisfactory and wasteful conditions cannot be remedied.

The C.L.A.'s Excellent Record

The most noticeable feature of the second annual meeting of the Canadian Lumbermen's Association, which was held in Ottawa on February 1st, was the fact that the Association gave every evidence of having passed rapidly and successfully through the organization stage and of having become a positive factor of usefulness to its members. The subjects taken up for discussion at the meeting, and the results which have been achieved during the past year, were such as one would expect only from an organization of several year's standing It is not to be claimed that lumbermen are more active in their own interests than are other classes of business men. The only explanations of the success which has been achieved are, that the need for such an association was very great, that the members realized this from the outset and that they were, above all things else, fortunate in securing the services of a secretary of wide experience and restless activity. Mr. Hawkins has been keenly awake to the Association's interests ever since his appointment and the confidence which he has awakened among the members has induced them to support the Association loyally. Those who were present at the second annual meeting included many of the most active and successful lumbermen in Canada. By their presence and discussions they showed that they understood the problems which they have to solve and that they intend to work steadily until each solution is obtained.

The Canadian Lumbermen's Association represents interests which one might fear would find their objects clashing in a manner to make successful working difficult. That this has not been the case is due to the spirit of give and take which is one of the chief characteristics of lumbermen. The objection was frequently heard, when the proposal for the formation of an association was first made, that the manufacturers and wholesalers would not be able to sail in the same boat, and

that the local interests of the different sections of the country would operate so strongly that it would be impossible to harmonize them. For these reasons it was feared that the Association would meet with little success. Those who were active in its formation, however, had other convictions. From the first the Association has worked upon the larger problems affecting the trade, which permit of a solution agreeable to all sections of the country. The most important of these was the group of difficulties connected with the relation between the railway companies and the lumbermen. For years and years these difficulties had been a source of trouble which it seemed impossible to remedy. In the matter of freight rates alone the Association has been instrumental in bringing the state of affairs to the attention of the Railway Commission, and it is confidently expected that the commission will shortly make an order vindicating the stand taken by the Association; namely, that the railways were charging rates under a new schedule which effected a substantial increase, whereas the Board had instructed the railways to draw up a new schedule with a view only of simplifying the tariff. The railways fought the case vigorously until the end, but were obliged by the figures presented by the Canadian Lumbermen's Association to admit the correctness of the charge.

In the matter of a simplified bill of lading for use by shippers throughout Canada, the Association during the past year took an active part. The railways and the shipping interests came together and the result is that all the large railways in Canada are to-day using a bill of lading which is not only much simpler than the one which it has superseded, but which relieves the shipper of the serious burden of proving that any loss or damage sustained is due to the railway's fault. The burden of proof is now placed upon the railways to show that they have handled the freight with proper care. Having settled some of their most important organization problems and gone actively into the field of trade problems, the Association have been encouraged by their success to approach the solution of difficulties that to-day are still troubling similar associations in the United States which have been in existence for many years. One of these matters is the problem of the creation of a credit rating bureau. Although no action was taken upon this matter by the Association, it was thoroughly discussed, and the consensus of opinion was that the Association was still too young to handle the subject successfully. The opinion prevailed, however, that within a few years it would be feasible for the Association to take up the question. A somewhat similar matter of considerable importance, that of the formation of a collection bureau, was also taken up. The service, in both these respects, given by the United States' association, is so extensive and reliable that until the Canadian association becomes much larger it would be unwise to go to the expense of instituting new bureaus which could not for some time be as complete as would be desired. That the Association, young as it is, however, is grappling with questions of this nature, shows that its members are alive to their responsibilities and to their opportunities; and shows also that so soon as occasion warrants it, they can be depended upon to take up these questions which are of so much importance to the trade.

At present, the most important question which the Association has to consider is that created by the bill now before the Senate of Canada regarding insurance. If this bill becomes law it will handicap the lumbermen seriously in obtaining insurance. It will make their insurance more costly and will subject them to an insurance monopoly. The Association is acting vigorously in conjunction with the premium payers' committee of Canada to prevent this from coming about. Everything legitimate that it is possible to do to prevent the bill from becoming law will be done. If they fail in this, however, the lumbermen are already preparing themselves for the new conditions which will exist after the bill is enacted into law. The Association, through its secretary and executive, is studying the advisability of creating in Canada a lumbermen's fire insurance company or a stock company composed of lumbermen, to insure lumber risks. They are already assured by the experience of similar companies in the United States that such a course would meet with success in Canada. If it becomes necessary to take this step the Association will have reports and statistics already compiled which will be of great assistance.

The above instances give a good idea of the work which is being done by the Canadian Lumbermen's Association on behalf of the lumber trade. That it has been able to effect so much within so short a space of time must be unusually gratifying to its members. If the Association receives the same support in the future as it has already received from the trade, it will be able to make itself not only a benefit to the trade in general but a distinct advantage to every individual member. In the United States the association movement has grown to great proportions and has had an excellent effect upon trade conditions. That the same will be the case in Canada there is now no reason to doubt.

Lumbermen Fighting for their Rights Before Parliament

The insurance problem which is before the lumbermen of Canada to-day is one which, though not of their own making, demands their attention and careful study. They are threatened with the formation of an insurance monopoly in Canada which will prevent them from securing the advantage of the cheap rates afforded by the lumber specializing and mutual companies existing in the United States. On the mistaken ground of patriotism the Government has been led to believe that the insurance companies licensed in Canada should be protected against the competition of those which are not so licensed. Accordingly, a tax of 15 per cent. on the premium paid to foreign companies is proposed against policyholders, and a regulation is to be included calling upon policyholders to make returns showing the amount of insurance in force with such foreign countries, and other details, which it will be a matter of much inconvenience for them to attend to.

Why the lumbermen of Canada should be singled out so distinctly is hard to understand. Probably the Government does not aim at the lumbermen any more than at any one else. It so happens, however, that the lumbermen of the Dominion of Canada will be hit more seriously perhaps than any other class. The irony of the situation is increased by the fact that the lumbermen are, of all manufacturers in Canada, the ones who have least to be thankful for from the Governments of the country. There are few industries in Canada which do not enjoy in one form or other a measure of protection against foreign competition. Not so the lumbermen. There is no duty upon lumber entering Canada from foreign countries. Lumbermen have applied in vain, time and again, to the Governments of the country for protection, but not one of them has yet been able to overcome the fear of the farmer, for to him lumber is a great necessity. The farmers' vote has been held so close to the eye of the Governments that they have been unable to see the injustice involved in connection with the lumber industry. So hopeless has this situation become that the lumbermen have almost ceased to discuss the matter at all. Having given the lumbermen no protection it might be thought that the Government would hesitate before making them the special victims of a policy of protection for insurance companies. The insurance companies enjoy a large measure of monopoly already, and with the proposed benefit added will be able to dictate freely to the premium payers of Canada.

The lumbermen of Canada, through the Canadian Lumbermen's Association, are taking a commendable stand in regard to this matter. They are fighting vigirously for their rights before the Parliament of Canada, but they are not losing sight of the fact that their opponents are well organized and numerous, and that they have great wealth to assist them in their campaign. It may well be, that the premium payers of Canada will lose. The lumbermen, however, do not propose to permit themselves to be imposed upon if they can avoid it. They will carry the war into Africa if necessary, and do their utmost to defeat the insurance people upon their own ground. If the bill becomes law and the tax of 15 per cent. is enforced the only resource of the lumbermen will be to form for themselves insurance companies similar to those with which they will no longer be able to do business. The insurance companies may even find, when it is too late, that they have encouraged the development of competitors at home much stronger than those they have destroyed abroad. Canadian lumbermen will be loyal to their own interests, and so, it is presumed, will Canadian manufacturers in general. With the development of mutual or stock companies specializing in insurance in trade industries, the old line companies will have competition

to face, of a character which they have not before in Canada had to fight to any great extent As in the United States, the formation of lumber specializing companies in Canada would unquestionably be followed by a lowering of the rates charged by the old line companies, and lumbermen would become more than ever in the habit of insuring in these companies. It would, in the end, be a benefit to the lumbermen of Canada if they established their own mutual companies to handle the business which they now have to send abroad. From this point of view they have little to fear from the bill now before the Canadian Government but they have good reason to complain that they and other Canadian manufacturers should not be put to the trouble and expense of such a course when the only object to be obtained is the protection of the insurance companies of Canada in what is already virtually a strong monopoly of the insurance business.

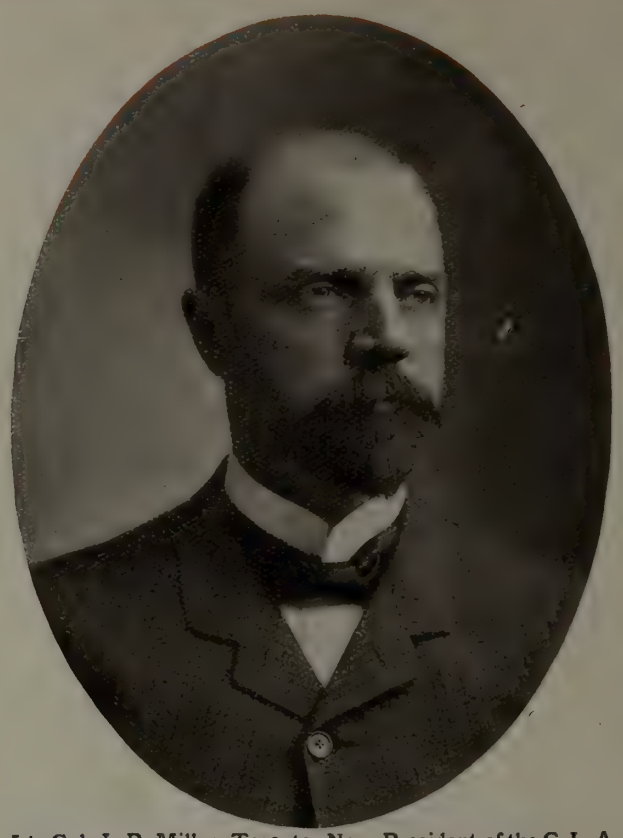
The position taken by the insurance companies is not only an unfair but an illogical one. They object particularly to Canadian premium payers securing the benefit of the low rates charged by the lumber mutual insurance companies of the United States. They declare that they should be allowed to do all the Canadian business. When they handle risks which are too large they themselves can reinsure in foreign companies and take advantage of the low rates. They would, however, make it a penal offence for Canadian premium payers to follow a similar course. A report of some of the evidence given before the Senate's Banking and Commerce Committee appears elsewhere in this issue.

The Pulp Wood Situation and the United States Tariff

The export of pulp and pulpwood will be made the subject of a debate in the House of Commons on Feb. 21. Two members of Parliament have resolutions upon the order paper, dealing with the matter and the debate is pretty sure to bring out some interesting ideas. It is scarcely to be expected, however, that in the present delicate condition of the relations between Canada and the United States, the Government will declare itself definitely one way or another. It will be thought by some that it is unfortunate that the debate should be brought on at present, when, by waiting for another month, the United States position upon the question may be better understood. After March 31, the maximum tariff of the United States will come automatically into force against those countries which are not specifically designated by the President, as treating the United States as favorably as other nations. Although it is scarcely to be expected that the maximum tariff will be imposed upon the products of Canada, yet there is an element of doubt about the situation and there are one or two disquieting elements, such as the Franco-Canadian treaty, which complicate the situation. If it had been possible therefore to postpone the debate in the House of Commons until the United States had shown their hands, it might have been better. The difficulty about delay, however, would have been that by the end of March the session might be so far advanced as to make it impossible to have the matter brought up at all. A thorough canvass of the situation, however, will probably do more good than harm, as it is certain to show the strength of the Canadian position.

Conviction comes with seeing, more than in any other manner. Any Canadian who doubts the wisdom of keeping our pulpwood in Canada and manufacturing it into paper by Canadian labor, should visit a large papermaking mill. Once he has seen the logs going into the grinders and the huge rolls of paper growing at the end of the papermaking machine, he should become a confirmed advocate of any plan to prevent the pulpwood of Canada from going across the border to supply work and make profits for a foreign people. As a commercial proposition alone the demand for preventing the export of pulpwood is sound. As a means of protecting our forests from rapid destruction it is also important.

While upon the question of duty it is interesting to note that there are more points of view than one regarding the outlook for the lumber trade in Canada, as affected by the tariff situation. The outlook for the lumber trade in Ontario is pretty generally accepted as being splendid; better, in fact, than it ever was. Here, however, is the view taken by a mill owner living in the United States but operating extensively in Canada. "In our opinion," he says, "the outlook for 1910, as concerns Ontario lumber manufacturers, is contingent largely upon the course of the yellow pine market, but much more so on the interpretation placed on the United States tariff bill as regards imports from Canada, and it seems to us that Canadians generally, and Canadian lumber manufacturers in particular, are taking entirely too much for granted when they assume that the duty will certainly remain as it is now. The United States certainly does not want a tariff war with Canada, and assumes that Canada does not want a tariff war with the United States, but as a matter of fact, it is a pretty well defined opinion on the American side of the line that the United States can stand such a tariff war much more easily than Canada, as it imports from Canada a great deal more than it exports to Canada. There is also a feeling among American manufacturers that the Canadian authorities are discriminating against certain American goods to a greater extent than would be indicated by the lumber tariff. For instance, in marine boilers, it is rather notorious that an American boiler will not be allowed the steam pressure that is allowed a Canadian boiler of exactly similar specifications and test. There is also a feeling on this side of the line that Canada is rather going out of her way to make it difficult for the President to construe the American tariff bill so as to admit Canadian goods on the minimum duty. The exportation prohibition on pulpwood and logs could be overlooked, because, although obviously aimed at the United States, it would apply also to any other country, and also the preferential duty in favor of England could be overlooked by the President, owing to the obvious relations between England and Canada, but the French treaty and others may prove a decided stumbling block.



"The Canadian lumbermen in Canada seem to take a view that if any tariff disturbance between the two countries is precipitated it will come from the United States, and so far as it can be done it is the duty of the Americans who are operating in Canada to see that nothing of the sort occurs. Several of them have added, in talking with the writer, that it would not make much difference to them anyhow, as their market is in Canada and England, and they ship very little to the United States and don't care whether there is a high duty or not. We think they are wrong on both of these points. If Canada gives preferential duty to other countries, which discriminate against the United States, it is impossible for the Americans who are lumbering in Canada, or for anybody else to change the interpretation of the American tariff law until Congress could repeal it, and we do not believe it would be repealed. We think that if the Canadian lumber manufacturers do not want their product discriminated against in entering the United States, it is up to them so far as possible by their influence with the members of Parliament from their districts, to prevent the essential cause of such discrimination, and the matter is really in their hands

"As to the effects of the maximum duty on Canadian lumber upon Canadian manufacturers, who are now selling their lumber primarily in Canada, we think that in case the maximum duty were imposed by the United States, that they would find their market a vastly different thing from what it is now. A very considerable amount of lumber is produced in Canada by Americans, or former Americans, who, knowing the American markets, naturally ship their lumber to those markets and leave the market in Canada practically free for Canadian manufacturers. If the American market was taken away (it would certainly be by a maximum tariff, which would be prohibitive), they would naturally seek the Canadian market, and we do not believe it would take two weeks after a maximum duty was enforced for every American manufacturer in Canada to have one or more salesmen seeking orders from the customers of the Canadian manufacturers. There could be only one result to this, of course."

This is a very reasonable treatment of the matter from the writer's point of view, but it should be kept in mind by Canadians and Americans alike, that the question at issue is not which country could stand a tariff war the easier, but how each country can preserve its own interests with the least injury to the other. There is really only one stumbling block in the road at present, viz., the Franco-Canadian treaty. It should be possible to find a method of preventing this from precipitating a tariff war. As to the prohibition of the export of pulp from Canada, it is inconceivable that any country would take offence at a measure of caution taken to preserve for Canadians their own birthright.

John Hendry, Vancouver, New Vice-President of the C.L.A.

Lt.-Col. J. B. Miller, Toronto, New President of the C.L.A.

D. C. Cameron, Winnipeg, New Vice-President of the C.L.A.

Noteworthy Convention of C.L.A.

Second Annual Meeting Attended by Representatives from Many Parts of Canada—Discussions upon Various Important Business Problems—Mr. J. B. Miller of Toronto, the New President

The second annual convention of the Canadian Lumbermen's Association was held in Ottawa on Tuesday, Feb. 1st, and was successful in every respect. The attendance was encouraging and the interest taken by the members present in the important subjects which were brought up for discussion showed that the Association is already a most important factor in their work. The attendance was representative of the lumber interests in many parts of Canada.

The meeting was of a character that one might expect from an institution which had already been in existence for a number of years. The reports presented by the officers and committees showed that the period of organization was well passed and that the Association had entered vigorously upon a period of active campaign in behalf of the interests of its members. The matters discussed included such interesting subjects as "credit rating," "the establishment of a trade report bureau," "the establishment of a collection bureau," "terms of sale and discount," "insurance," "the manufacture of odd lengths," "trade ethics," etc. The executive of the Association during the past year have done excellent work and have so imbued the members with confidence in their work that practicaly all large questions taken up for discussion were finally referred to the new executive for the taking of definite action. The new executive thus come into office with a number of clear-cut lines of action to follow during their term of office, and at the end of the year will no doubt have an interesting report to present showing practical advance along the lines laid down by the second annual meeting.

Mr. Gordon C. Edwards, president of the Association, occupied the chair during the annual meeting and was much assisted in his work by the secretary, Mr. Frank Hawkins. After the reading of the minutes, the president read his report, which was in part as follows:

"We had our first annual meeting on May 19th last, and it is now my pleasing duty to again preside at your annual meeting. While we have only about eight months to record, I think you will find the various reports of sufficient interest to warrant me in saying that the Canadian Lumbermen's Association has come to stay. Those reports and the details which will be the outcome of the discussion thereon I shall leave for your particular information. I would merely like to draw your attention to one or two points which I consider very important.

"With a view of increasing the membership, the secretary was sent out to British Columbia and as a result of the good offices of our friends in the West the membership was increased very considerably.

"A question as to the organization of a credit rating and trade report bureau in connection with this Association has received very careful consideration, and our secretary visited New York for the purpose of investigating the question. This Association is indebted to Mr. E. F. Perry, secretary of the National Wholesale Lumber Dealers' Association of New York City, for his courtesy and advice.

"The matter of forming an insurance company or companies in connection with this Association to specialize on lumber risks has been taken up by your directors. In view of the pending legislation it was decided to let this matter stand until the annual meeting, when the whole question could be thoroughly discussed.

"You will remember that when we last met, our freight rate case before the Board of Railway Commissioners was adjourned from May 18th to Sept. 21st, and although the final order of the Board has not yet been issued, we cannot look upon the result as anything but a complete vindication of our position

"The question as to who should pay for the costs of providing stakes and fastenings for lumber, etc., loaded on flat cars, was made the subject of an application to the Board of Railway Commissioners, and the case was heard April 6th, 1909. On July 24th the Board issued Order No. 7599, directing that the matter was one of rate and not of equipment. This necessitated filing a new application, which was done by the Canadian Manufacturers' Association, Dec. 20th, 1909. The following associations are parties to the application: The British Columbia Lumber & Shingle Manufacturers, Limited; the Mountain Lumbermen's Association of British Columbia; the Montreal Lumber Association; the St. John, N.B., Board of Trade, and the Canadian Lumbermen's Association. This matter will be heard on the 15th of this month, and if any of you have not already submitted your evidence in support of our contention I would urge upon you doing so immediately. When I say to you that the lumbermen of the United States paid their legal advisors $25,000 in fighting a similar case before the Interstate Commerce Commission, and that they are now appealing to Congress for relief, you will understand what this Association is trying to do for the trade in Canada, and so far there has not been one cent of extraordinary expense in connection with the prosecution of the matter.

"You will also be called upon to discuss the question of a customs duty on lumber imported into Canada. In this connection I think it well to call your attention to the clause in the United States tariff pro-

viding that automatically on March 31st, the maximum tariff of 25 per cent. imposed by the bill will apply to imports from all countries which are not specifically exempted by proclamation of the President. We should endeavor to avoid the appearance even of irritation. At the same time we should remember that Canada is for Canadians.

"The business manager of the "Canada Lumberman and Woodworker" wrote your secretary Jan. 6th, 1910, regarding the possibility of this Association considering the question of making rules for the grading and inspection of lumber. If it is your pleasure to take this matter up, possibly some member present may move a resolution to that effect.

"As this Association has now members in the provinces of Quebec, Ontario, Manitoba, Saskatchewan and British Columbia, it would appear advisable to consider the appointment of provincial presidents as provided for in Article VI. of the constitution. The suggestion is made for your consideration.

"Before concluding, I would like to take this opportunity of thanking you for the honor done me in electing me as your first president and re-electing me at your first annual meeting to that office. I would like also to tell you that I consider our secretary, Mr. Hawkins, the right man in the right place. He has worked very hard in connection with this Association."

In the course of his report, President Edwards also stated that he wished particularly to refer to the interest taken by Mr. John Hendry, of Vancouver, in the work of the Association and to the assistance which he had given to the secretary, Mr. Frank Hawkins, during the latter's visit to British Columbia. This visit had resulted in the addition of 23 new members to the Association

Before resuming his seat, Mr. Edwards also added to his report the following remarks: "I consider it an honor to be president of this Association, and I will be glad to help it in any way I can in the future. The good work done by Mr. Hawkins during the past year is deserving of the strongest commendation. He has worked early, late and hard in connection with the matters that we have had to deal with, and I think that you will all agree with me that the work could not have been done better. The next president will have some idea of what Mr. Hawkins is He is the most persistent worker I have ever known. I think he is the right man in the right place."

At the suggestion of the chairman the secretary was instructed to send a telegram of congratulation to Mr. W. J. Bell, of Sudbury, one of the members of the Association, who was injured severely in the recent railway wreck at the Spanish river, but who is now recovering rapidly from the effects of the accident. This was done, and a telegram of thanks was received later from Mr. Bell A letter of sympathy was also sent to Mr. Bremner, one of the members of the Association, who is at present undergoing treatment at the Protestant hospital at Ottawa.

The annual report of the secretary, which was read by Mr. Frank Hawkins, was as follows:

"Since our last meeting the work of the office has, I believe, progressed. The membership has been substantially increased and I trust that during the coming year we shall add considerably to our membership. May I say in this connection that each of the members can render service to the Association in this respect, and I would now urge that the time has arrived when a vigorous canvass to increase the membership should be made. Undoubtedly there are a number of the smaller mills which would gladly respond to an invitation to join this Association, and I would suggest the advisability of forming a committee of three to further this object.

"Since November the 9th, 1909, this office has been sending out to all our members, details referring to lumber and allied industries in inquiries which appear in the weekly report issued by the Department of Trade and Commerce. The number of addresses which have been furnished in response to these circulars is 38, and the number of members to whom these 38 addresses have been furnished is 14, and would seem to indicate that the results justify a continuation of this policy.

"It would serve no good purpose to attempt to enumerate the many services rendered by this Association. Suffice it to say, that your secretary holds himself ready at any time to attempt to solve difficulties under which the membership of this Association may be laboring. The Association is yours to use in the best interests of the trade. Your secretary desires to express his very keen appreciation of the confidence and loyalty which it has been his fortune to receive at your hands. For the coming year I bespeak your very hearty co-operation, and if there is one point which you will allow me to suggest, it would be the prompt reply to letters or circulars sent from this office."

The report of the treasurer, which was presented by Mr. R. G. Cameron, was brief, and showed that the Association was in a satisfactory financial condition

The committee on the constitution and by-laws presented a printed copy of the constitution and by-laws as drawn up by them. This was adopted by the Association with two amendments, relating to the time for calling the annual meeting. These amendments were made in order to give a longer notice to the members living in western Canada. Notice of the annual meeting, according to these amendments, will be sent to each member at least fifteen days before the date of the meeting, and if a special meeting is called, the notice will be tewnty days at least in advence.

The report of the committee upon transportation was received and adopted. The report was as follows:

"The prosecution of the freight rate case before the Board of Railway Commissioners, after having been twice adjourned, was brought up for final argument Sept. 21st, 1909. The complete analysis of statements of actual shipments during the months of June and September, 1908, and February and March, 1909, which had been furnished by the railway companies, proved conclusively that the effect of the tariffs complained of was to increase rates very materially. The effect of these increases was particularly noticeable between large shipping and consuming points and also on all export business. The importance of this application will be noticed when at the end of four months after the final hearing the Board of Railway Commissioners had not been in a position to give the final order in the matter. Your committee, however, is pressing them for an early and final disposition.

"Another matter of very grave importance to the members of this Association has been the prosecution of an application to which your

Capt. R. G. Cameron, Ottawa
Treasurer of the C.L.A.

New Director of the C.L.A.

Dwight J. Turner, Toronto, New
Director of the C.L.A.

Association is a party, regarding the furnishing of stakes and fastenings for flat cars. To your committee, there is no doubt about the injustice of requiring shippers to provide these stakes and fastenings, but the regulation imposed by the railways and the custom so well rooted, is often very difficult to overcome. Evidence has been asked for from our members, and when the case comes up for hearing we hope to be in a position to present the matter in a manner which will result in immediate relief to shippers.

"Though not a party to the application, your Association was represented at the hearing before the Board of Railway Commissioners protesting against the effort on the part of the railways to raise the classification on joiners' work from 6th to 5th class. The application of the railways in this matter was disallowed by the Board.

"The question also came up, of an application to the Board by the telegraph companies for an order specifying that on all words not dictionary words, tolls should be collected at the rate of five letters to a word on all land line "code" messages. This application, we feel, was the result of an abuse on the part of certain code makers, whereby a combination of letters in certain series produced a remarkable word, which the telegraph companies claimed was detrimental to their business. We therefore had no objection to raise, and the order of the Board does not interfere with nor increase the rates on our telegrams.

"Commencing with October 1st, 1909, the new form of bill of lading which was authorized by the Board of Railway Commissioners for Canada, in Order No. 7562, came into general use on Canadian railways subject to the jurisdiction of the Board. The simplified bill of lading is a distinct benefit to every freight shipper in Canada. Instead of the complicated clauses which characterized bills of lading prior to October 1st, 1909, we have now a bill with only eleven clauses. It is conceded that the interest of both shipper and carrier are fully protected, and one of the principal features of the new bill is the fact that the initial carrier is responsible for loss or damage to the freight. This simple bill of lading is the result of the work by the Canadian Shippers' Bill of Lading Committee, of which the secretary of this Association was appointed a member. It is gratifying to know that the Intercolonial Railway, which is not under the jurisdiction of the Board of Railway Commissioners on local traffic, has also adopted this bill of lading. The suggestion is thrown out that it would be in the interests of the shippers of this country if all railways, whether Government or otherwise, were subject to the jurisdiction of the Board of Railway Commissioners for Canada."

Insurance Committee's Report

The report of the committee upon insurance was then submitted, and the secretary read a communication from the committee of premium payers of Canada, which, he explained, represented all the large sections of Canada. The Canadian Lumbermen's Association, he said, had been asked to have a representative on that committee, and had agreed. The final decision of the committee had not yet been made known. A meeting was to be held very soon, when a plan of campaign would be definitely mapped out. The committee had asked the Association to make a grant of $50 as their share of the expenses of the compaign. After some discussion upon the subject, it was decided that this grant should be made and that if a further grant were necessary the executive should be empowered to deal with the matter.

The report of the Committee on Insurance was as follows:

"The insurance bill which passed the House of Commons at the last session of Parliament, but which failed to become law through Parliament proroguing before the bill could pass through the Senate, has again been brought up at this session of Parliament and is now before the Senate's Banking and Commerce Committee, having been read by that body a second time. There had been numerous objections to clauses 70 and 139, and your Association was asked to join a committee which was being formed in the city of Montreal for the purpose of conducting a campaign looking towards the protection of the premium payers of Canada. The discussion of these two clauses has not yet been reached by the Senate committee, and inasmuch as the committee of insurance premium payers of Canada are preparing to present the case of the policyholder when the objectionable clauses are reached, your committee suggests that this will be the most effective way of defeating such legislation. As this is practically the only matter of legislation which has come up during the year it has been decided by mutual arrangement between the committee on legislation and this committee that the one report would suffice for both."

The secretary drew attention to the fact that the insurance companies made a strong point in their campaign of the fact that most of the industries of Canada were already thoroughly protected, and that they, the insurance companies, were entitled to similar treatment. The lumber manufacturers of Canada, however, were not protected at all, and it might be advisable that in addition to assisting the premium payers' committee as much as possible, the representatives of the Canadian Lumbermen's Association upon the committee should be empowered to take an independent stand if necessary.

Mr. W. H. Rowley, of the E. B. Eddy Company, Hull, Que., agreed with the secretary in this regard. He did not think, however, that there was any possibility of the insurance bill being passed by Parliament in its present form. The insurance companies, however, were taking a more determined ground, and had issued a pamphlet claiming that the clause calling for a 15 per cent. tax upon premiums paid to companies not licensed in Canada, was not stringent enough. Mr. Rowley believed that this claim would help to ridicule the companies and might result in the bill being thrown out of Parliament. After further discussion the matter was allowed to drop without a definite decision being reached, the chairman remarking, however, that he did not think it was necessary to pass any resolution upon the subject as it was the sense of the meeting that the representatives of the Association should have a free hand.

The Credit Rating of Lumbermen

The question of forming a credit rating bureau was then taken up. The secretary in this connection gave a brief report of his visit to New York, during which he had made some ensuiries into the system as operated there. He said that the credit rating bureau in connection with the National Wholesale Lumber Dealers' Association of New York, was a very complete affair. He had been given copies of all the forms used in the conduct of that business. These forms indicated the tremendous amount of detail which was necessary in order to have a thoroughly equipped and organized bureau. The bureau was in communication with a number of rating companies in different parts of the country and had a complete corps of solicitors, attorneys, etc., of their own. They were also in communication with all the banks and with every possible source of infromation regarding the financial standing of people engaged in the lumber trade. It was indeed a very complete bureau, and the organization of such a bureau would be an extremely expensive matter. There was no doubt whatever that the formation of a credit rating bureau in connection with the Canadian Lumbermen's Association would be a very desirable step, but the Association was only a young institution at present and it was a question whether they should go to the expense involved in a matter of this kind immediately. The members of the National Wholesale Lumber Dealers' Association of New York levied a separate subscription of $50 to cover the expenses of the bureau. If the Canadian Lumbermen's Association were to establish such a bureau their membership was much too small to be able to meet the expense with such a small payment. It seemed to him at the present time a little beyond the Association's reach. In addition to this, there was also another feature of the matter to be considered. The National Association were covering the ground in Canada pretty thoroughly. It was possible that eventually the Association might make some sort of an arrangement with the National Association to take over the Canadian reports as a nucleus for a Canadian credit rating bureau, and they might make some reciprocal arrangement to supply the National Association with Canadian reports in return for United States reports. At the same time, however, his advice would be to pass the matter over for a little time at any rate.

Mr. J. B. Miller, Toronto, agreed with the secretary in this regard. He believed it would be cheaper for the Canadian Lumbermen's Association at present to join the American Association, and get their reports, which would be much better than the Canadian Association could possibly get for themselves for some time to come. After five or six years perhaps, when the membership of the Association had become large enough, they might be able to go in for a separate bureau.

The organization of a collection bureau was also discussed. The secretary explained that he had details of the method in which this work was carried on by the National Wholesale Lumber Dealers' Association. They charged a regular schedule of fees for the collection of debts. It was a question at the present time whether the Association was disposed to organize such a bureau It would not, of course, call for so great an expenditure.

The president remarked that the value of the collection bureau was based largely on the fact that a great many people would rather pay their bills than have it become known that their accounts had been put in the hands of a bureau for collection. However, this could also be attended to by the National Wholesale Lumber Dealers' Association. After some further discussion the subject was dropped without any action being taken.

A short discussion followed upon the matter of arranging the date of the annual meeting so that it can be held at the same time as the Forestry convention. It was decided that the Association should fall in with the proposal that the two conventions should be held on succeeding days, but it was thought best not to alter the date of holding the Association's meeting. It is understood that it will be possible to have the Forestry convention follow the meeting of the lumbermen and to arrange for a joint banquet.

Terms of Sale and Discount

An interesting discussion occurred upon the matter of terms of sale and discount. Mr. J. B. Miller introduced the discussion by calling attention to the difficulties which arose out of the different ways that different firms had of doing business.

Mr. John Hendry thought the matter could not be successfully attended to by the Canadian Lumbermen's Association. In British Columbia, the local associations were attending to it, and the conditions

were gradually improving. The circumstances of the trade were becoming such that they could not do away with the different rates prevailing in different sections, and he believed that the local associations were the only ones which could handle the matter with any success.

Mr. H. J. Bartlett, Orillia, said that they had to consider the means of the people to whom they were selling. They could not tie up money tightly or else they would loose business. Frequently a little difference in discount decided a sale. The difficulty seemed to be one upon which they were not able to unite.

The secretary stated that the Western Canada Lumbermen's Association at their meeting in December had passed a resolution fixing the rate of discount at 2 per cent. for 15 days, 1 per cent. for 30 days, and net for 60 days; renewals to be subject to 8 per cent. interest and exchange. This was for the retail trade Mr. Hendry remarked that this resolution had been passed all right, but at the same time they did not always adhere to it.

Mr. Peter Whelen, Ottawa, was of the opinion that any change made by the Canadian Lumbermen's Association would be premature.

The chairman asked what Mr Whelen would think of changing the net rate from 60 to 90 days. Mr. Whelen did not think it would work out satisfactorily in the Ottawa trade.

The chairman replied that he thought the day was coming when they should have uniform terms and enforce them. He believed it was a mistake to have different terms.

Insurance Carried by Retailers

Mr. Walter Laidlaw, Toronto, brought up the important subject of the insurance carried by retailers on their stocks. The matter was very vital to the wholesalers and manufacturers. They were themselves trying to secure reports from their travellers as to the amount of insurance carried by their customers. They found it a difficult matter, however. If they tried to interest their customers individually, the latter would say that they would buy from someone else, and accuse them of trying to "plug for the insurance companies." He thought the Association might issue a little pamphlet with a view to educating the retailers. If a fire occurred in a retail yard it might wipe the company out and the firms who had given them credit would lose their money.

The chairman said that the matter was very important because they were doing business all the time more or less with men who were not carrying insurance.

On the suggestion of Mr. Laidlaw, it was decided to get out a little circular calling the attention of retailers to this matter. The circular is simply to be suggestive, calling the attention of the retailer to the fact that, if he is not carrying sufficient insurance, he should look into the matter at once.

Losses by Jumping of Lumber Jacks

A letter was read from Mr. W. J. Shepherd, of the Georgian Bay Lumber Company, Waubaushene, Ont., calling attention to the prevalence of the habit among men employed to work in the woods, of deserting after they have secured their transportation to some point which they wish to reach. This was the cause of the loss of a great deal of money to operators annually. He hoped the Association would take the matter up and see if they could devise some means which would ensure that the men should go to the woods to work if they had been advanced the price of their railway fare. Under the present conditions the men simply walked away and the employers had no recourse at all against it. He suggested that a circular should be sent to lumbermen to secure their opinions upon the subject. The conditions prevailing to-day were not only costing the operators a great deal of money but were having a bad effect upon the men, by turning many of them into tramps.

A similar letter was also read by the secretary, which had been received from Mr. Melville Bertram, of the Collins Inlet Lumber Company. Collins Inlet, Ont. One of the members present remarked that until five years ago it had been a criminal offence for the men to desert after securing their railway fares, but since then it had been only a civil offence and the men simply jumped. The operator might sue them, but that would be no use, as the men had no money. Their company had lost $200 in this way last year.

The secretary announced that the Association had sent out a number of circulars in regard to this matter and had received several replies, which indicated that the practice was apparently a very general one.

Mr. J B. Miller said that his company found it necessary to send an agent to look over the men before hiring them. In that way they got off a little better, but still they lost a great deal of money.

The secretary stated that one of the letters he had received was from the Booths, saying that they lost a considerable sum of money annually in this manner. Another was from Mr. Gillies, suggesting that a clearing house should be established with a clerk in charge or a separate agency of the Association, to send lists of all the firms who would agree to give information upon the matter. Mr. Miller said that this would be a very difficult matter because the men so frequently changed their names The only thing to do, he believed, was to send out their own men to look over the employees before they were taken on

Mr. H. K. Egan, Ottawa, said that the system of hiring men was a bad one. The agencies which supplied the men got two dollars for each man they sent out. They did not care who they hired or how they hired them. This was the weakest end of the whole lumber business. He did not know how it could be remedied. He believed, however, that under the common law they could arrest a man who deserted in this manner, on a charge of obtaining money under false pretences.

Mr. Rowley asked why the employers should accept men who had come from some other camp. The employers could stop the trouble pretty much themselves without having to call in any lawyers, if they would refuse to take a man who had deserted from some other camp. If the operators would agree with one another not to hire men who had deserted, it would pretty soon put a stop to the whole business.

Mr. Laidlaw suggested that the secretary should write to the Minnesota Lumbermen's Association about the matter. He understood that a few years ago this Association had taken up the same matter and had adopted a remedy which had turned out very satisfactorily. If the secretary were to write to the Minnesota Lumbermen's Association asking for information upon the subject it might help them materially. Mr. Laidlaw's suggestion was adopted, and upon the recommendation of the chairman the question was left in the hands of the executive, with instructions to appoint a committee to deal with the matter at once.

The Manufacture of Odd Lengths

The matter of manufacturing odd lengths of lumber was taken up next. The secretary read a letter from the Oregon Lumbermen's Association pointing out that a resolution had been adopted by that association, calling for the manufacture of odd lengths of flooring, ceiling, siding, rustic and finish. At a meeting of the Western Canada Lumber Manufacturers in December last, a resolution had also been adopted approving of the course taken by the United States Association, and pledging its members to adopt a similar course from January 1, 1910.

An interesting discussion followed this, at which it was brought out fully that odd lengths were already being manufactured in various parts of Canada, particularly in the Ottawa valley and the Georgian Bay district. The chairman thought that the question was one which should be left in the hands of the executive.

Mr. Miller was inclined to disagree. The manufacture of even lengths only, involved a loss of two per cent., and pine was becoming scarce enough already.

Mr. Bartlett took issue with Mr. Miller. In Ottawa, he said, the manufacturers got less money for their lumber, because they included the odd lengths. Manufacturers had to take into consideration the architect, and he was a very peculiar individual. They could not get away from him.

The chairman thought it would be a hard matter to deal with because in some sections it was customary to quote with the odd lengths included, and in other sections without them.

Mr. Bartlett said it was too local a matter for the Association to deal with.

The chairman added that he thought it ought to be left in the hands of the manufacturer.

Mr. Bartlett did not think the manufacture of even lengths only, involved a waste. He had looked into the matter very closely and found that often a board which might have stood 16 feet was cut down to 15 feet. This was not always the case, but it occurred sufficiently often to say that the man who makes even lengths was not losing that odd foot. Moreover, those who made odd lengths sold their lumber for less money. They might not realize it, but the buyer always had in consideration how the lumber would fit into his market.

No definite action was taken upon this subject.

The adoption of a code of trade ethics was next discussed. The code recently adopted by the American Lumber Trades Congress was submitted to the members and after a brief discussion it was referred to the executive committee, with instructions to appoint a committee to deal with it.

Relations of Wholesalers and Retailers

A discussion upon the relations existing between manufacturers and retailers was introduced by a letter from Mr. V. R. Marshall, of the Brockville Lumber Company, who was unable to attend the meeting. He stated in his letter that manufacturers frequently sold direct to contractors and builders. Unless some rules were adopted to protect the middleman in some measure, he said, it would be of no use to them to belong to the Canadian Lumbermen's Association. Mr. Geash, of the Brockville Lumber Company, enlarged upon the same point.

The chairman explained the difficulty connected with the matter. His company were retailers as well as manufacturers, and there were many others in the same situation, so that the matter was a very difficult one to adjust.

Mr. Geash complained that when a private individual sent a bill to a manufacturer for one or two buildings, they would quote on it as soon as they would to a retailer.

The chairman said that these quotations were made from the retail department. Individuals submitting bills in this manner did not get the wholesale prices. His company's travellers sold to the retail trade only. They never went to the contractor.

Mr. Laidlaw said that it would not pay wholesalers to sell to builders and contractors. His firm, however, had a retail department, and several retail yards. These yards received retail bills and quoted retail prices on them. As wholesalers they thought it was not to their own interests to interfere with any of their retail customers. He believed, however, that it might be a good thing if the secretary would write to the members of the Association and suggest to them that they confine their trade to the retailers strictly. On Mr. Laidlaw's suggestion, it was decided to refer the matter to the executive.

At the afternoon session, the first matter taken up was the situation arising out of the failure of the Government to take reasonable measures to prevent the abuses existing in connection with settlers and veterans who take up land which is not suitable for agriculture, remove all the timber and then, being unable to obtain a living upon the land, move to some other locality and repeat the process. In this way limit holders are subjected to the loss of large quantities of timber. The situation is really one of legalized thievery. The settlers take off timber which the limit holders have already purchased from the Government. Having no mills, the settlers simply sell the timber back to the limit holders, who have already paid for it once.

The discussion upon this matter was brief. The members were of one opinion only upon the matter, being persuaded that they are being unjustly deprived of that which actually belongs to them by right of purchase. The matter was left in the hands of the legislation committee.

Duty on Lumber Entering Canada

The duty on lumber and shingles coming into Canada from the United States was next discussed. The secretary read a communication from the British Columbia Lumber & Shingle Manufacturers, Limited, stating that they concurred in the resolution adopted by the Canadian Manufacturers' Association upon the subject, which was as follows:

Item 502 —That the words "shingles of wood" be struck out (from the free list.).

Item 503 —Planks, boards, beams, joists, and similar timber or lumber of wood, n.o.p., when not otherwise manufactured than sawn, split or cut, whether creosoted or treated by any preserving process or not.—Free in all tariffs.

Item 504 —Planks, boards, beams, joists, and similar timber or lumber of pine, not elsewhere specified, spruce, cedar, fir, larch, hemlock, or tamarack, when not further manufactured than sawn or split, whether creosoted or treated by any preserving process or not —General tariff rate $1.25 per M.

Item 504A—Shingles of wood.—General tariff rate 30 cents per M.

Item 504B—Laths of wood.—General tariff rate 20 cents per M pieces.

Item 504C—Clapboards of wood.—General tariff rate $1.25 per thousand superficial feet.

Item 504D—Pitch or southern pine, when imported by manufacturers of agricultural implements, or span manufacturers, for use only in their own factories in the manufacture of agricultural implements or spars.—Free in all tariffs.

Mr. Hendry said that he did not think there was much to be said upon the matter just now. It appeared to be impossible to get the Government to act in connection with the lumber tariff alone. The Manufacturers' Association was trying to get the Government to appoint a tariff commission.

After a brief discussion it was agreed to leave the matter in the hands of the executive, with a suggestion in favor of their appointing a committee to work in conjunction with the committee of the Manufacturers' Association upon the question.

Uniformity of Grading Systems

The desirability of adopting a uniform system of grading lumber throughout Canada was next discussed. The secretary drew attention to the varied nature of the grading systems in use in different parts of the country and said that he believed the matter would be a very difficult one to arrange.

Mr. Hendry said that in British Columbia they had dealt pretty fully with the matter, both in regard to foreign trade and in regard to the rail trade. Their grading, of course, would not apply to eastern lumber In British Columbia they had different grading rules for the mountain and coast mills. They believed that they had arrived at a very successful grading to suit the lumber they were handling, but it would be pretty difficult, without making further enquiry, to know whether the same grading would apply all over Canada. He did not think that grading rules could be adopted which would apply all over Canada. He proposed, however, that they should communicate with the different local associations and have them submit their grading rules. The matter could then be taken up at the next meeting in Ottawa and they might be able to do something effective in the way of systematizing the grading rules for the different localities.

The chairman said that it would certainly be a decided advantage if they could arrange their grades somewhat after the manner of the grading adopted in the United States, viz., No. 1, 2 and 3 barn, etc.

Mr. Egan said that he did not believe they could succeed with it for some time to come. It would necessitate a considerable amount of education before they could carry it out.

On the suggestion of Mr. Hendry the matter was left in the hands of the executive, with instructions to secure the grading rules in use in the various sections of Canada.

Growth of Mutual Insurance in the U.S.

Outline of the Movement Among Lumbermen—Successful Reduction of Rates and Consequent Saving — Address Before C. L. A. by Justin Peters of Philadelphia

The most interesting and important part of the afternoon session of the convention of the Canadian Lumbermen's Association was that devoted to a discussion of insurance matters. The critical situation produced by the insurance bill which has been passed by the House of Commons and is now before the Canadian Senate has aroused the lumbermen of Canada to an anxious realization of the dangers which are ahead of them if the proposed legislation is not amended. If the bill in its present form is allowed to become law they will be subjected to a heavy tax upon their insurance, and they are already casting about for a remedy to this situation if they are unable to prevent its occurrence. The most logical course will be for the lumbermen to consider the establishment of a lumber specializing insurance company of their own. With a view to studying the feasibility of such a course, the secretary of the Association recently visited the United Sates, and while there made the acquaintance of Mr. Justin Peters, manager of the Pennsylvania Lumber Mutual Fire Insurance Company of Philadelphia. Mr. Peters gave him much valuable information and kindly consented to come to Ottawa and address the Association upon the subject.

Mr. Peters said that he had come to say a few words regarding the success which had been attained by the lumber insuring companies of the United States. The present movement really dated back to the early 90's, and the reason for it was that the old line companies had made exceptional charges to lumbermen for their insurance. It was thought at that time that the formation of mutual companies would relieve the situation. In Philadelphia, scarcely had the Pennsylvania Lumber Mutual Fire Insurance Company been organized before the old line companies made a substantial cut in their rates. The Pennsylvania company began in 1895. At about the same time the Lumber Mutual Fire Insurance Company of Boston was formed. A little later came the Lumbermen's Mutual Fire Insurance Company of Mansfield, Ohio, and the Lumbermen's Mutual Insurance Company of Indianapolis, which has been eminently successful. They had accumulated good cash assets and were paying, the first three mentioned, a 40 per cent. dividend, and the Indiana company a 35 per cent. dividend. The Indiana company also hoped to reach a 40 per cent. basis at the end of the present year. The effect upon the rates in the districts in which these companies were operating had been a lowering of the charges which the old line companies made. In fact, at the present time there seemed to be a general inclination to reduce rates to such a competitive basis that the mutuals doubted the propriety of following these rates. In talking the matter over with lumbermen whose rates had been reduced, it was a pleasure for him to learn that they showed a spirit of loyalty to the mutual companies. The lumbermen recognized that if they did not support the mutuals it would be only a matter of time before the mutuals would have to go out of business. The old line companies would then have the lumbermen at their mercy.

The success which the mutual companies had had, was largely due to the care which they had exercised in the selection and inspection of their risks. The movement had been largely an educational one. They found to-day that it was much easier than it had been at first, to get the policyholders to adopt the suggestions of their inspectors. An important factor in the success of the movement had also been the fact that the mutual companies kept their expenses down very low. The standard of character also among lumbermen was higher perhaps. No doubt it was higher than in the general lines of business, and the moral risk was not so great an element in their business. Last year the Pennsylvania company had only been paying a 35 per cent. dividend, but a few weeks ago the board of directors had increased the rate by 5 per cent. They had paid out last year $84,000, and had added to the surplus, which was nothing more or less than undivided profits, $52,000, making their surplus $290,000. They had increased the amount of their insurance in force by $2,000,000, and had paid $40,000 to their premium account, and were well on the way towards the half million point in their assets.

The company had not had as much insurance in Canada as they would like, as they were not licensed in Canada. During their 15 years they had written in Canada about $45,000 in premiums, and they had had losses amounting to $11,000, which was about a 25 per cent. loss ratio. Of course, with the mutual companies there was the assessment liability, but the companies mentioned had limited this liability to an amount equivalent to three times the amount of the premium named in the policy. On account of the assets which it had been deemed prudent by the managers to accumulate, there had been a corresponding decrease in the likelihood of any assessment becoming necessary. Even if they were obliged to make an assessment to-day, the money which they had saved to their policyholders in the way of dividends would make the assessment seem infinitesimal.

The Lumber Underwriters of New York, a Lloyd's company, had also been very successful. They had accumulated substantial assets and had made some little money for themselves. The Adirondack Lumber Insurance Company of New York, and the Toledo Fire & Marine Insurance Company were stock companies organized and run by lumbermen, and they also had been successful. All of the companies he had mentioned had from time to time had their bad years, but, generally speaking, the movement had been successful.

American Companies not in Position to Deposit

One of the members of the Association present asked Mr. Peters whether, if a law were passed in Canada requiring the mutual companies to make a deposit of $100,000 or to cease doing business in Canada, the United States companies would pay the deposit.

In reply Mr. Peters said that they had exactly similar conditions to consider in the United States already. The State of New York was a very desirable one in which to do business, but in the past they had been unable to secure a license in that State. Recently the State had passed a law which permitted mutual companies organized in some other State to carry on business in New York State, if they would deposit $200,000 with the Government. The managers of his company, however, had felt that they were handling their policyholders' money. They were trustees for that money, and it would be very unwise for them to make a deposit of $200,000 for such a purpose. That sum would represent a very considerable portion of their assets. He was quite sure, however, that if there were any method by which the mutual companies could be allowed to do business in Canada without making a deposit they would be very glad to do it. In the United States, deposits were required by the various states, which varied according to the state. The policy of the company in which he was interested had always been to invest in assets which could be readily realized upon. They were invested in railway bonds and municipal bonds. They had no investments in stocks at all. They wanted their assets in securities upon which they could realize in half an hour a sufficient sum to tide them over any period of misfortune. There was nothing which had been more closely watched by their president and board of directors than this one matter. It might be, however, that they would reach a position some day where they would feel justified in placing some of their money on deposit with governments for the purpose of obtaining licenses in other States or countries. The Lumbermen's Mutual Insurance Company had a million dollars of assets and they had deposited $200,000 with the State of New York. It had been held, however, that a citizen of the United States had a right to insure his property in any company he chose so long as the company was licensed to do business in some particular State and the contract was made in the State in which the company was licensed. For a long term of years the Pennsylvania company did not secure admission to any other State. All their contracts were made in Philadelphia, and they were licensed under the laws of Pennsylvania. The policies were made there and sent through the mails to the policyholder.

Mr Rowley remarked that a company to be of any use to Canadians (if the proposed bill were passed), would have to be one that would do business in the country. The point was whether the companies in the United States would be likely to comply with the law and make a deposit that would enable them to do business in this country.

Mr. Peters replied that they would not do so at the present time, and in answer to Mr. Rowley's question why they would not, he said that he thought it was all right for the Canadian Government, if it wanted to do so, to require a deposit, but in their present financial position he would recommend his board of directors not to make a deposit, because they had only between $400,000 and $500,000 of assets and ought to keep it intact until some time when one or two hundred thousand dollars did not represent quite so much to the company. He believed that they could get a great deal of business in Canada if they wanted to.

Mutuals or Stock Companies for Canada

The chairman asked Mr. Peters what he would recommend Canadian lumbermen to do. Would he recommend the formation of mutual companies in the different provinces?

Mr. Peters replied to the effect that they would get a great deal more loyalty from policyholders when the latter felt that they were part and parcel of the company, than when the company was a stock company. The policyholders would do more for a mutual company. They would make improvements in their property which they would not make if they thought that they were only making money thereby for somebody else. At the same time they should consider that one of the greatest advantages accruing to lumbermen from branching out into the field of insurance would result from having a company backed up by some assets from the outset. It had been very slow business for them in the United States when they had started out to do business without any assets. While they had been successful even in the early days, in getting the old line companies to reduce their rates, he was satisfied that they would have greater immediate success in Canada in inducing the old line companies to reduce their rates, if they had a stock company organized to go right out among lumbermen and say, "here, we have such and such resources, and we want your business." The old line companies would follow the competition more quickly. At the same time, however, he thought that the mutual company would be more advantageous because it would be entirely independent of the old line companies.

Mr. Dwight J. Turner brought up the matter of reinsurance. He asked whether, supposing this law were to go into force and they were to form a company of their own they would not probably have the same privileges of reinsuring with outside companies as other companies had. Although they might only be able to assume small risks themselves, they would be able to reinsure with other companies and thus obtain their object. That was the cause of one of the strong objections they took to the bill. The old line insurance companies were able to insure them for 2 per cent. and reinsure them for 1 per cent., and they could not do so themselves. If they had a lumbermen's insurance company could they not reinsure with the mutual companies in the United States and thus give the insurer a large amount of insurance?

Mr. Peters said that he thought they could. He would not like to say so positively without looking into the matter closely, but he believed they could. In answer to a question as to how many risks would make a fairly safe number to commence business upon, Mr. Peters said 100 risks would be more than they had in Pennsylvania to begin with. They considered the retail yards the cream of the business, and they took risks also upon sash and door factories, planing mills, and all kinds of woodworking establishments so long as they came up to their requirements. It would be a good plan in Canada to have two or three mutuals in different provinces. It might not be necessary at first, but as the business developed it would be a good plan.

In conclusion, Mr. Peters said that has company had been classifying its business for the last few years and hoped soon to be in a position to show some very interesting figures regarding the loss on each class. He assured the Association that the company's books and experience were at their service if they wished for further information.

The chairman, on behalf of the Association, thanked Mr. Peters for his kindness in giving them the assistance of his advice and the benefit of his company's experience.

After a few minor matters had been dealt with, the meeting was concluded and the directors held a meeting for the election of officers. The officers for the year 1910, as elected by the directors, are as follows: President, J. B. Miller, Toronto; Vice-Presidents, J. C. Browne, Ottawa; John Hendry, Vancouver; D C. Cameron, Winnipeg; Alex, MacLaurin, Montreal; Secretary, Frank Hawkins, Ottawa; Treasurer, R. G. Cameron, Ottawa; Directors—Ontario: G. C. Edwards, Ottawa; J. B. Miller, Toronto; J. S. Gillies, Braeside; J. C. Browne, Ottawa; J. J. McFadden, Renfrew; H. K. Egan, Ottawa; W. C. Laidlaw, Toronto; Dwight J. Turner, Toronto; George Gordon, Cache Bay; W. H. Rowley, Ottawa; W. A. Firstbrook, Toronto; Quebec: D. H. McLennan, Montreal; Alex MacLaurin, Montreal; Wm. Power, Montreal; British Columbia: John Hendry, Vancouver; Otto Lachmund, Arrowhead; A. D. McRae, Fraser Mills; Wm. McNeill, Vancouver; D. C. Cameron, Winnipeg, and Wm. Cowan, Prince Albert Sask.

At the annual meeting of the shareholders of the Eagle Lumber Company, Limited, held at their Montreal offices, 97 St. James street, Feb. 7th, the following officers were elected for the ensuing year: President, Leonidas Villeneuve; Vice-President, J. I. Dupre; Secretary-Treasurer, Joseph H. Poulin; Directors: Leonidas Villeneuve, Arthur P. Beaupre (Managing Director), J. I. Dupre. The secretary reported a very successful year of business for 1909, and the results, as shown by the balance sheet, proved very gratifying. For 1910, the company say that the outlook is very promising. The Eagle Lumber Company manufacture spruce and hemlock, and handle extensively white and Norway pine and white cedar shingles.

The annual meeting of the Log Picking Association was held recently at the Queen's Hotel, Toronto. The chair was occupied by Mr. Dwight J. Turner. The members present were: Mr. D. J. Turner, Mr E Leatherby, Mr. Carney, Mr. Guy Moulthrop, Mr. Ralph Loveland, Mr W. E. Bigwood, Mr. Fred Waldie, Mr. W. J. Sheppard, Mr. Chas. Moore, Mr. James Playfair, Mr. Wells, Mr. Edwards, Mr. Lovering, Mr. W. A. Firstbrook, Mr. Bell, Mr. Arnold, Mr. G. G. Gladman. The profits on operations concluded during the year amounted to $21,251.74. This was distributed among the members and the balance on unconcluded operations is being held for working capital.

Lumbermen Gather at Annual Banquet

Joyful Celebration of Second Birthday of the C. L. A.—Interesting Addresses by Hon. Clifford Sifton, Mr. Wm. McNeill and Mr. Thomas Southworth

On Tuesday evening, February 1st, the annual banquet of the Canadian Lumbermen's Association was held in the Russell House, Ottawa. There were about sixty guests present, and the event was a most successful one. The retiring president, Mr. G. C. Edwards, Ottawa, occupied the chair, and the seat of honor upon his right was occupied by Hon. Clifford Sifton, chairman of the Commission of Conservation. To the left of the chairman sat Mr. Wm. McNeill, of Vancouver. Among the others seated at the head table were the following: Thomas Southworth, Toronto, president of the Canadian Forestry Association, and former Director of Colonization; A. J. Hendry, Vancouver, president of the Canadian Manufacturers' Association; Hon. Senator W. C. Edwards, Ottawa; George Gordon, M.P., Cache Bay, Ont.; J. F. Orde, K.C., solicitor for the Canadian Lumbermen's Association, Ottawa; R. H. Campbell, Dominion Superintendent of Forestry, Ottawa; J. S. Gillies, Braeside, Ont.; D. Murphy, Ottawa; Justin Peters, manager of the Pennsylvania Lumbermen's Fire Insurance Company, Philadelphia, Pa.; H. K. Egan, Ottawa; J. C. Browne, Ottawa; Peter Whelen, president of the Ottawa Board of Trade; Dwight J. Turner, Toronto, and W. A. Firstbrook, Toronto. The others present included the following: William Power, Quebec, Que.; J. B. Miller, Toronto, Ont., president Canadian Lumbermen's Association; J. B. Hunter, Deputy Minister Public Works; W. C. Laidlaw, Toronto, Ont.; Ward C. Hughson, Ottawa, Ont.; H. W. Gays, Ottawa, Ont.; J. H. Redfern, Montreal, Que.; J. E. H. Barnet, Renfrew, Ont.; C. J. Booth, Ottawa, Ont.; J. J. McFadden, Toronto, Ont.; Frank Hawkins, Ottawa; W. H. Rowley, vice-president Canadian Manufacturers' Association, Ottawa, Ont.; Leslie Macoun, Ottawa, Ont.; Cecil Bethune, Ottawa, Ont.; Thomas Wilson, Ottawa, Ont.; E. L. Leetham, Ottawa, Ont.; S. Thompson, Ottawa, Ont.; Gorman Wilson, Ottawa, Ont.; S. J. Montgomery, Ottawa, Ont.; A. D. Huff, Ottawa, Ont.; R. G. Cameron, Ottawa, Ont.; Dwight P. Cruikshanks, Ottawa, Ont.; W. H. Bromley, Pembroke, Ont.; W. R. Beattie, Pembroke, Ont.; M. P. Kinsella, Ottawa, Ont.; W. J. Sherman, Ottawa, Ont.; — Geash, Brockville, Ont.; F. X. Plaunt, Ottawa, Ont.; D. McLaren, Toronto, Ont.; W. A. Cameron, Ottawa, Ont.; E. A. Dunlop, Pembroke, Ont.; — Patchen, representing New York journals; W. S. Tilston, Montreal, Que.; W. A. Home, Quebec, Que.; H. B. Poliwka, Quebec, Que.; W. M. Ross, Ottawa, Ont.; A. E. Cates, Toronto, Ont.; — Hughson, Ottawa, Ont.; A. E. Maxwell, Ottawa, Ont.; Horace Boulltbee, Toronto Ont., representing "Canada Lumberman"; Donald Heins, Ottawa, Ont.; Alex. McCall, M.P.; Thos. Walklate.

Lumbering and Conservation

After the loyal toasts had been enthusiastically disposed of, Hon. Clifford Sifton was called upon, and he delivered a forcible address upon forestry and conservation. Mr. Sifton said that he was pleased to have an opportunity to say a few words upon a subject which had engaged a great deal of his attention during the past year and probably would engage more of it in the future, namely, the resources of Canada. It had been said that in Canada we had been late in waking up to the idea that our resources should be conserved and taken care of. There was something in that possibly. In some respects we had been late in waking up, but there were many excuses to be made for that fact. A country situated as Canada, had not been able to take the time or to spend the money necessary to carry on the work in a careful, far-seeing and scientific manner. One of the abuses which had been allowed to exist and which should be remedied was the entering of settlers upon land which was not fit for agriculture. He could imagine no greater crime than allowing any land which was unfit for anything but growing timber to be entered for by settlers. It was not agricultural land. You could not carry on agriculture on a little moss-covered rock. There was nothing that could be done to more seriously injure the country than to permit settlers to enter such land. It injured both the land and the people who were sent there. The families could not possibly earn a living, nor could they grow up in such a way as to become desirable citizens.

There were some parts of the country with which he was tolerably familiar. He had travelled between Ottawa and Winnipeg during the last 40 years from 10 to 15 times a year, and had seen what was going on in that country, much of which was of the character he had spoken of, and he had put forward in the strongest way he could the claim that that territory should be made use of for hte only purpose for which it could properly be made use of, that was for the purpose—most of it—of growing timber and providing for the amelioration of the climate and the regulation of the waterfall.

A few months ago he had thought that it would be interesting to try and make some computation of the timber resources of the United States and Canada that would be satisfactory to himself. He need not say to them how hard it was to obtain anything of a reliable nature. Ultimately he had come to the conclusion that, making every possible allowance for mistakes, he had secured something like an approximation of the real figures. The highest estimate of the total supply of merchantable timber in the United States was about twenty-two hundred billion feet, board measure, and the annual consumption of the United States was about one hundred billion feet. The allowance for growth was about thirty billion feet annually. The net annual consumption was therefore about seventy billion feet. There was therefore about 30 years' supply of merchantable timber standing in the United States at the present time. This conclusion was based on the assumption that the consumption of the United States would remain the same as it was at the present time. But it would unquestionably largely increase. In the next 25 years the United States would add 25,000,000 to their population beyond a doubt. Unquestionably the consumption of lumber would increase. Notwithstanding the very great increase in the use of other materials, the quantity of lumber used per capita of the population continued increasing. In Canada he had examined every official record that he could secure, and had made every allowance that he thought necessary. Taking the country by provinces, he had come to the conclusion that the available supply of merchantable timber was as follows: Prince Edward Island, 600,000,000 feet; Nova Scotia, 12,000,000,000 feet; New Brunswick, 22,000,000,000 feet; Quebec, 75,000,000,000 feet; Ontario, 35,000,000,000 feet; Dominion lands, 150,000,000,000 feet; British Columbia, 200,000,000,000 feet, total 494,600,000,000 feet. The pulp wood resources were about as follows: Quebec, 500,000,000 cords; Ontario, 300,000,000 cords; British Columbia, 300,000,000 cords; Dominion lands, quantity unknown; total, 1,100,000,000 cords. While the supply of lumber standing in the United States would last that country for 30 years; in Canada we could supply them for seven years after their own supply had been exhausted.

There was no question of doubt that the figures he had given in regard to the United States were quite large enough. His own opinion was that perhaps the supply in Canada was much less than the figures he had given would indicate. They showed that we had in Canada a supply of timber for our own use sufficient for a long time to come, but they also indicated that the time would come, before a very great while, when the governments of this country would have to decide whether they would allow the lumber of Canada to be exported or cut, faster than was required for their own population. Within a very few years this question would become an acute one for the Dominion of Canada.

In conclusion, Hon. Mr Sifton spoke of the work of the Conservation Commission. The members of the commission intended to work at the problems conservatively and carefully, but they were going to stay at the work. They were going to fight the question of fire and the question of the destruction of the forests all along the line until they had won a complete victory.

The Governments and the Lumbermen

Mr. J. B. Miller called upon Mr. Thomas Southworth, president of the Forestry Association, for an address. Mr. Southworth spoke interestingly of the work of the Forestry Association, and in the course of his remarks made use of a thought, which, coming from one who for so many years was in close touch with the forestry and lumber policies of the Province of Ontario, should carry much weight. Speaking of the matter of the dissatisfaction existing among lumbermen regarding the policy of the Governments of Ontario and Quebec in connection with permitting settlers to enter their limits and strip large areas of their timber, he said that it ought not to be a difficult matter for the Canadian Lumbermen's Association and the members of the Ontario and Quebec Governments to get together and effect a solution of that difficult problem and also come to a mutually satisfactory solution of the uncertainty existing regarding the manner in which the old licenses are to be treated. A solution of this matter might be reached on a basis which would permit of the lumbermen going in for the practice of reforestry.

Mr. Wm. McNeill, Vancouver, was called upon in the absence of Mayor Hopewell, of Ottawa, to make a speech in his stead, on behalf of the city. Mr. McNeill filled the gap perfectly, and made the most humorous and interesting speech of the evening. His humor was broad and catching and was pleasantly interspersed with patriotic utterances which appealed strongly to the guests. Speaking of British Columbia, he declared that within the last few years the people of that province had discovered in its northern section resources which would make the province one of the brightest jewels in the diadem of Britannia's crown.

Short addresses were delivered by the members of the press and the banquet was concluded with a brief speech by the chairman in reply to a toast to his health, proposed by Mr. Murphy.

Thomas F. Strong Called by Death

The late T. F. Strong of Ogdensburg.

Thomas F. Strong, general manager of one of the largest lumber companies in northern New York, and president of the Marine Transportation Company, which operates a fleet of lumber carriers on the Great Lakes and the St. Lawrence river, died of heart failure at his home at Ogdensburg, N.Y., on Saturday, Feb. 5th.

The late Mr. Strong was well known in Canada as vice-president of George Gordon & Company, Limited, lumber manufacturers, Cache Bay, Ont. He was a captain of the lumber industry across the border. Mr Strong was born in that great lumber centre, Cincinnati, O., in 1856, and had spent most of his life, over 34 years, with the Skillings, Whitney & Barnes Lumber Company, at Ogdensburg. Since the death of Mr Tibbets, in 1908, Mr. Strong had been general manager of the company, of which the executive committee of the board of directors consisted of himself and Messrs. J. D. McLaurin, treasurer, New York, and Henry J. Bartlett, Canadian general manager, Orillia, Ont. The Skillings, Whitney & Barnes Lumber Company commenced business in Ogdensburg, N.Y., in 1856, and is therefore one of the very few companies which have been in existence over fifty years.

In addition to the Skillings and Gordon companies, Mr. Strong was connected with the following business concerns: President of the Marine Transportation Company, Ogdensburg, N.Y.; director of the Campbell-McLaurin Lumber Company, Montreal; vice-president of the Cavendish Lumber Company, Limited, Lakefield, Ont.; director of the Temagami Lumber Company, Orillia, Ont., and president of the Strong Lumber Company, Orillia, Ont.

James Workman died recently in New Toronto. He was seventy-two years old and one of the early pioneers in the lumber business in the Georgian Bay district. He was manager for Burton Bros., of Barrie, until four years ago, when, owing to ill health, he retired.

James Robb a prominent Ontario lumberman, died recently aged eighty-two years. He was an old resident of the Stony Lake district and was buried at Norwood, Ont

---

Listless Lumber Markets in Montreal

Montreal Office of the "Canada Lumberman."
February 12th, 1910.

The present excellent demand for hardwoods required for interior finish is the feature of an otherwise listless market. All lines of hardwoods are selling well but the outstanding demand is for birch and chestnut, with the latter practically off the market. One-inch chestnut is extremely scarce and commands almost as much as 2-inch and 2½-inch stock.

The shingle market continues inactive but dealers view the situation hopefully on account of the increasing number of enquiries that are coming to hand. The Ontario trade is just now showing an interest in eastern shingles and constant enquiries are being received from that direction.

The lath market continues firm. As reported in the previous issue of the "Canada Lumberman," last season's cut was just the same as that of 1908, and it is but natural that with the increased demand during the past season there will be a scarcity before the new cut is ready for use. Latest reports from Ottawa state that practically no lath are available at that point.

Good grades of pine are still quite firmly quoted, while common stocks are showing a steady improvement.

The spruce market, on the whole, is showing an improved tone. Enquiries are coming in with a greater regularity and yards are buying to replenish their stock. Hemlock, on the other hand, continues dull and very little improvement is reported.

Mr. A. S. Williams, Montreal, Canadian manager for the Lidgerwood Manufacturing Company of New York, was in Toronto last week and favored the "Canada Lumberman" with a call. Mr. Williams reports an excellent outlook for business.

Protest Against The Insurance Bill

Prominent Lumbermen Give Important Evidence Before Senate Committee—Counter Proposal by the Companies

Ottawa, Feb. 10.—The Senate Banking and Commerce Committee to-day heard the vigorous protest of the lumbermen of Canada against the clause of the new insurance bill imposing a 15 per cent. tax on premiums earned by companies not registered in Canada.

Mr. Frank Hawkins, secretary of the Canadian Lumbermen's Association, gave effective testimony and filed voluminous documents which the senators will peruse at leisure.

"In the last seven months," he said, "I have travelled through much of Canada and come in touch with most of the lumber trade. I am therefore in a position to assert that the whole lumber industry of Canada is unalterably opposed to the terms of this bill restricting premium payers from getting insurance where it is least expensive. We are equally opposed to the proposal of the Canadian companies to substitute a provision requiring us to offer our risks to four-fifths of the companies in the province before being free to go elsewhere for insurance."

Mr. Hawkins placed in the hands of the committee the correspondence of some 70 lumber manufacturers, all of whom showed that by their own operations they were saving money by enjoying the liberty of insuring in mutual companies or by reciprocal arrangements. J. R. Booth had informed him that he was insured to the amount of from two and a half to three millions. The desire to insure as fas as possible in Canadian concerns was apparent from the fact that not more than $600,000 of this great amount was carried by companies not registered in Canada. And of the $600,000, there was $300,000 which would not be taken up by Canadian companies The Brunette Sawmill Company, of New Westminster, B.C., wrote that it carried $127,400 insurance, which at present cost $4,722. If the present clause of the Insurance Act became law the same policies would cost $6,554, or an increase of 39 per cent. The firm now has its risks covered in a lumber indemnity exchange which has members in Washington State and British Columbia.

Gillies Bros., of Braeside, sent a strong protest against lumbermen who enjoyed scarcely any tariff protection being imposed upon by so burdensome a tax as provided in the new insurance bill. A Toronto firm insured for $223,000, stated that $96,000 of this was in Canadian companies and $127,000 in United States companies. "We cannot pay Canadian rates, they are so high, so we are bound to go to the other side," the firm stated.

Mr. D. C. Cameron, Winnipeg, of the Rat Portage Lumber Company, stated that all companies in which he was financially interested carried in all some three million dollars insurance. A short time ago he had to go to New York to get insurance, and before he went told the Canadian agent in Winnipeg that he was willing to pay 5 or 10 per cent. more rather than change to companies outside Canada. Still, that was not sufficient inducement to the Canadian companies, and he was obliged to place the major portion in New York. In connection with lumber, he saved 30 per cent. by this.

Lumbermen were pleased at the violent attack made on the contentious feature of the bill by Mr. Geo. Gibbons, K.C., on behalf of the dry goods men. Never before was insurance legislation looked upon, he said, except as something to protect the public, and not the companies.

All the premium payers pin their faith to the following clause, moved this forenoon by Mr. Aime Geoffrion, representing people who insure with reciprocals:

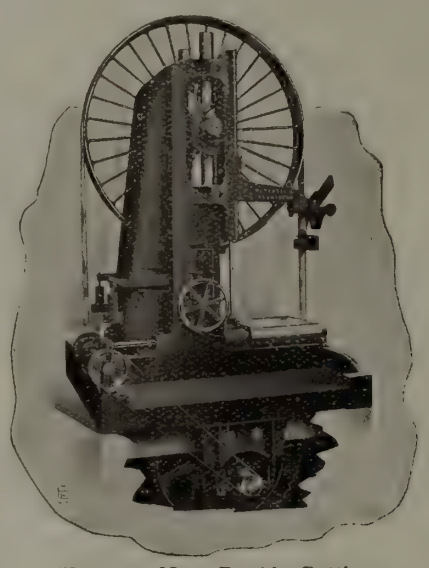
"Notwithstanding anything herein, any person may insure any property situated within Canada with any foreign unlicensed insurance company or underwriters or with persons who reciprocally insure for protection only and not for profit; and such risk may be inspected and any loss incurred in respect thereof adjusted; provided such company, underwriter or persons do not, in Canada, solicit or advertise for insurance

"The fact that an unlicensed insurer solicits or advertises in Canada for insurance shall not affect the validity of any insurance contract made by such unlicensed insurer, but shall subject him, his agents, representatives, inspectors or adjusters to the penalties provided for in section 70 of this Act."

Mr. Geoffrion contended in his address that for practical purposes there was effective combination among the licensed companies, in spite of the claim that there was competition between the tariff, non-tariff and mutual companies.

The first two days of the committee's sitting were devoted to hearing the evidence of the insurance companies. A proposal was made by the insurance companies to substitute in place of the contentious clause imposing a 15 per cent. tax on premiums paid to companies not licensed in Canada, a clause permitting the owner of property to go outside of Canada for insurance after applying to four-fifths of the companies in his province.

Machinery and Equipment



What Manufacturers of Logging, Sawmill and Woodworking Appliances are Doing

Waterous Company's New Double Cutting Band Mill

A new double cutting bandmill which has appeared on the market within the last few months and is rapidly establishing a record for itself among Canadian and American millmen, is the Waterous 1910 model bandmill, manufactured by the Waterous Engine Works Company, of Brantford, Ont This firm, the pioneers in double cutting mill construction in this country, were the first to conceive the idea of supplanting by a rigid mill the old telescopic bandmill which was at one time considered the solution of the double cutting problem.

A movable upper guide which could be swung about the exact centre of the saw blade, and a lower guide containing the same feature, were first produced by this company, and, attached to a rigid mill, gave splendid results as a double cutter. From time to time, as this mill grew in popularity, improvements were added, with the result that the Waterous mill became an established standard of excellence as a double cutter.

These special features have been incorporated in an improved state in the new 1910 model. The mill has been entirely redesigned to embody them in the most efficient manner and to do away with all ginger bread constructions. The wheel supporting columns are hollow, containing within them the raising and lowering mechanism and tensioning device, which are thus kept entirely free from clogging by sawdust. The columns are massive and rigid and carry the mandrel-bearing posts in babbitted housings above and below the mandrel bearings. This construction permits a very wide range of adjustment for the upper wheel without loss of rigidity. The top guide raising and lowering mechanism and front and rear rolls are power driven, both rolls and all drive mechanism being carried on the frame.

Waterous New Double Cutting Band Mill.

The tensioning device has several features of excellence. All fulcrum points are knife edged and tension weights are spring cushioned, so arranged that vibration and jar are taken up gradually by the springs without throwing a sudden extra tension on the saw. This tensioning device has been most successful, and has met with general approval wherever it has been installed, one mill cutting 2,000,000 feet in the last season, finishing the cut without cracking a saw.

The upper and lower guides, which have made this machine an excellent double cutter, are unique in design and contain features which, the company claim, are found in no other guide manufactured to-day. They are arranged to swing about a centre which corresponds to the exact centre of the saw blade. They can be adjusted instantaneously to crowd the saw into or out of the log, and can be opened—with one motion—extra wide to let slivers and sawdust pass. All adjustments are made from the tail sawyer's side, and the levers are arranged for convenience and speed. The upper guide is particularly rigid throughout its entire construction, and will permit absolutely no vibration in the saw blade. It is raised and lowered by power mechanism, but can be arranged to be moved by steam cylinder.

The care and attention that the manufacturers have given to the minor details in the design of this mill which are conducive to ease and rapidity of handling, recommend it to the operator. Although this mill has been on the market only since the middle of last year, it has had an extensive sale throughout the country. Sawmill owners who were the first to try the new design are enthusiastic over the cutting capacity and the perfect lumber turned out by this mill, and the manufacturers are in receipt of several re-orders which were sent in as an answer to a request for a testimonial.

"Burn your sawdust and sell your wood" is fast becoming the slogan of the manufacturers of lumber in all parts of the country. The Gordon Hollow Blast Grate, manufactured by the Gordon Hollow Blast Grate Company, of Greenville, Mich., makes it easy to run a plant with the sawdust, even if wet, green or frozen, while the proceeds of the slabs, etc., represent a very handsome income in itself. In fact, the company claim that it would be difficult for a sawmill operator to make the same amount so easily in any other way.

Lidgerwood Machines to be made in Canada by Allis-Chalmers-Bullock, Ltd.

The Lidgerwood Manufacturing Company, builders of steam logging machinery, have recently made arrangements for the future conduct of the rapidly increasing sale of Lidgerwood logging machinery in the Dominion of Canada. Allis-Chalmers-Bullock, Limited, of Montreal, will henceforth have sole rights as agents in the Dominion for this machinery. They will conduct a logging department similar to that of the Lidgerwood Company, with a full corps of practical logging men to examine timber holdings and specify and install suitable machinery for their operations

All regular and special forms of logging machinery will be handled. The regular types include the tandem and compound geared yarders, C-D and direct friction drum roaders, cableway skidders, portable ground skidders and loaders, incline hoists, sleigh hoists, log handling cableways, log handling derricks, log transfers, log loaders and unloaders. All machines will be built either for steam or electric power.

Mr. A. S. Williams, to whom the introduction of Lidgerwood systems in Canada is largely due, will be manager of the logging department of Allis-Chalmers-Bullock, Limited. Mr. Williams is a graduate of Cornell University in forest engineering, and has had wide experience in logging and loggng machinery. Previous to his association with the Lidgerwood Manufacturing Company, he was forest engineer for the Berlin Mills Company, large lumber operators in New England and Canada. He is further known to those interested in logging and forestry through his numerous writings on this and kindred subjects in the technical journals. He is an associate editor of the Forestry Quarterly, and a member of Hoo-Hoo, of the Society for the Protection of the New Hampshire Forests, American Forestry Association, Canadian Forestry Association. Society of American Foresters, etc., etc.

The high efficiency of Lidgerwood logging machinery is recognized by all steam logging operators. By the new arrangement Canadian lumbermen will be able to secure this high class machinery at a price comparing favorably with other machines, and will be benefitted by the prompt attention to their inquiries from experts locally resident. General information and catalogues of the Lidgerwood logging and log handling systems can be secured from Allis-Chalmers-Bullock, Limited, through their Montreal and Vancouver offices.

Henry Disston & Sons, Inc., Keystone Saw, Tool, Steel & File Works, Philadelphia, Pa., have recently opened branch houses in Seattle, Wash.; Portland, Ore.; and Vancouver, B.C., to better facilitate the filling of orders and to take care of their constantly increasing trade. These branches will devote their attention exclusively to the mill goods business, such as inserted and solid tooth circular saws, bandsaws, crosscut saws, cylinder saws, mill saws, stave saws, saw tools, machine knives, files, steel, etc., etc. The new Disston factory in Toronto, which was described in the "Canada Lumberman" of Feb. 1, is already very busy with a large number of orders.

The Hespeler Machinery Company, Limited, Hespeler, Ont., manufacturers of high grade wood tools, have issued catalogue "A," which gives a very thorough and attractive description of the excellent products of this company. The catalogue is of the loose leaf type and is strongly bound. It also is very attractively gotten up. The illustrations are numerous and instructive and the descriptions given of each machine cannot fail to prove valuable to all who contemplate the installation of woodworking machinery.

A Campbellton, N.B. despatch says that the lumber cut on the Restigouche this season is 25 per cent. greater than last year and amounts to 100,000,000 feet, as compared with about 75,000,000 feet last year. There are 2,000 men in the woods west of Campbellton and if conditions had been more favorable at the early part of the season the cut would be even greater than it will be.

Messrs. White, Frost & White, wholesale lumber dealers, North Tonawanda, N.Y., have favored the "Canada Lumberman" with a copy of a handy and attractive calendar and stamp case. The souvenir is small enough to fit the vest pocket and will be very welcome to those who are fortunate enough to obtain one.

The mill owners of the State of Washington have joined with those of Oregon in their determination to manufacture odd lengths of lumber, and to insist upon retails accepting at least 15 p.c. of odd lengths.

Pulpwood Propositions

AMERICAN PAPER MILL OWNERS ARE inquiring for Quebec holdings because they simply must have the raw material in spite of tariffs or anything else. To those interested we say let us show you the wealth of pulp tributary to our town as a manufacturing point and coming either from Ontario or Quebec waters to Lake Temiskaming. CYRIL T. YOUNG, Chairman, Publicity Dept., Board of Trade, Haileybury. 5

While serious results from the accidental breaking of small band saws do not often occur, it is a splendid idea to have both the top and bottom wheels hooded, to prevent them. It helps reduce the cost of casualty insurance and adds materially to the safety of operating such saws.

Canadian Pine in England

English advices state that some of the new manufacture of waney board pine has been placed with shippers at 58½d. net per cubic foot delivered at Quebec in the raft. This price is equivalent to selling the produce of the log from first quality to culls at over $64 per 1,000 feet board measure, delivered at Montreal, about £26 10s. per Petersburg standard. The ordinary deal log will produce 10 to 15 per cent. of good sidings, a good line of shipping cull sidings, balance box lumber, culls, etc. Good sidings at present are dear and scarce, $60 per M. feet at the mill being asked, shipping culls $24 to $28 per M. feet, and balance of the output of the log from $12 and upwards. From these figures it must be evident that making waney board pine, which is less costly to produce and handle, must be more profitable, if suitable timber is available for the purpose, than converting the log into sawn goods for the U.S.A. market.

The Rest Cure for Belts

Apropos of the rest cure for belts, which is being argued lately, it is a question, according to the evidence submitted by its advocates, whether the benefits are not offset by the drawbacks. In a recent letter to "The Woodworker," J. A. says after letting his belts rest they were "entirely too tight to run, but after two months they were all right, and we had no trouble." If they were too tight to run, it is reasonable to suppose that there was trouble of some kind, very likely hot bearings, but at any rate there was more strain and wear on the bearings, more power was consumed, and if there was two months of trouble on account of too-tight belts, it would not seem to me that the benefit was a sufficient reward for the trouble; and after the experience of the belts it is a question if they were in any better condition than if they had been left on all the time.—"The Woodworker."

An advance in the price of fir logs became effective on Puget Sound Feb. 1st. This was the first advance in log prices made on the Sound since last fall. The price of flooring logs is now $14, an advance of $2 per thousand over the old list. Merchantable was advanced 50 cents to $6.50. Loggers say that stocks on the Sound are light and that the demand has shown material improvement since the first of the year. Lumber prices are also higher, particularly in the cargo branch.

The total production of lumber in the United States during the year 1908 is given by the Forest Service as 33,224,369,000 feet. This is about 7,000,000,000 feet less than was produced in 1907, and was cut by 31,231 sawmills. The average value f.o.b. mills was $15.37 per 1,000 feet. In a bulletin issued by the Forest Service on the subject of the forests of the United States and their use, the statement is made that the industries which subsist nearly or wholly on wood, pay the wages of more than 1,500,000 men and women, and that the industries which use wood wholly or mainly in manufacture represent an investment of $2,250,000,000 and yield a product each year worth $3,000,000,000.

The Pine Lumber Company, Pine, Ont., near Cartier, report that the manufacturers in that section are enjoying an unusually favorable season for logging. There is not too much snow to hinder the cutting of logs even at this advanced time of the season, and yet enough to make roads for good hauling except in rough country.

During the month of January last, 749 timber leases were issued in British Columbia west of the Cascades, bringing to the treasury receipts of $104,910.65; while east of the Cascades 554 leases were put through, bringing in receipts of $63,782. Transfers swelled the monetary total by $420, and penalties contributed an additional sum of $1,225, making the total receipts for the month $170,337.65.

TIMBER MAPS

The undersigned can furnish to order timber and township maps of any section of New Ontario. Specialty of Abitibi timber maps. The advertiser was five years in the Ontario Survey Branch and knows the country thoroughly.

Review of Current Trade Conditions

Ontario

The quiet trade which usually characterizes the lumber business at this time of year is not by any means so noticeable now as it was in 1908. On the contrary, conditions in Ontario to-day are unusually healthy looking and there is nothing to cause any fear that they will not continue so for some time to come. The most satisfactory feature of the situation to-day is the improvement which is noticeable in shingles. The demand is active and prices are well maintained. Quotatons in Toronto are firm at $3 for XXX British Columbia cedars and $2.20 for XX. A large Toronto dealer who handles many carloads of British Columbia cedar shingles, received a wire a few days ago cutting in half the quantity of cars his company will be able to ship at present prices.

The demand for lumber also is excellent. A Toronto dealer who recently made the rounds of some of the Georgian Bay mills found that stocks were pretty thoroughly cleaned up. Nearly all stocks are now reported to be in the second hands. Wholesale firms at Tonawanda are making enquiries of wholesalers at Toronto for stocks that they cannot secure at the mills. It is a long time since this was the case before. There is a great scarcity of everything in the shape of one-inch pine uppers and seconds. Hemlock also is stronger. Stocks of hemlock are pretty well picked up. The cut was small last year and the increased trade will take up all the stock. Retail men seem to have awakened to the fact that if they want stocks they will have to buy quickly. In southwestern Ontario trade at present is rather quiet, as a result probably of the heavy mantle of snow. Inquiries, however, are plentiful and a heavy trade is expected, immediately on the opening of spring.

The situation among the camps in the Georgian Bay has not been encouraging, but with cold weather from now on, it will be possible to catch up to the work which was planned at the beginning of the winter. The soft weather in January was a serious drawback to logging operations.

At Ottawa there is considerable interest taken in the independent attitude of the lumber manufacturers, and middlemen are showing some concern about the situation. One large manufacturer is asking an advance of 15 per cent. over last year's prices on the better classes of lumber, and an increase of from $2 to $3 per thousand on all lines. Middlemen are inclined to believe that these demands are too high. Much will depend upon the price quoted by J. R. Booth. Good sidings and strips are selling to-day at $10 more for 1-inch than a year ago, and there is a general advance of $5 a thousand on everything better than shipping culls. Middlemen find themselves unable to secure stock. Extensive sales of box lumber and mill culls have recenty been made at fair prices and the market is benefited greatly by the movement of these lines. Lath continue very strong at Ottawa. No. 1 white pine has advanced a trifle, and before the new cut arrives it is believed that the price will reach $4.25. The upper grades are particularly scarce. There is a good demand at Ottawa for New Brunswick shingles and an excellent demand for shingles manufactured at Ottawa.

Eastern Canada

Lumber trade circles are more concerned at present about the logging situation than anything else. The unusually mild weather which prevailed during much of the month of January brought the logging industry to a temporary condition of stagnation. The disappearance of the snow and the thawing of the ground made the lumbering roads useless. It is feared that unless snow becomes plentiful again at once, the results will be disastrous. The delay which has already resulted will cause a material reduction in the winter's output of logs. Many portable mills have already had to suspend operations.

"English" deals are attracting attention at present. It is believed that rapid changes in market conditions may be expected at any time in the spruce deal trade. Prices are already firmer, though no important advances have occurred. The improvement is gradual but steady. The poor prospects for logging operations are looked to, to have an effect upon the prices of spruce deals. At present the quotations are about $15.50 to $16 for the usual specifications f.o.b. St. John. Stocks available at St. John total from five and one-half to six million feet.

There is a firmer tone in the market for eastern spruce at Boston. Reports indicate that manufacturers are considering increases in price. The general lack of snow is responsible for a tendency to hold prices firmly. The base price is $23, although some business has been done at $22.50, and even an occasional transaction has been made at $22. Cedar extra shingles at Boston in some cases are being held up to $3.70, but buyers are not to be found at this price. The actual business prices vary from $3.40 to $3.50, with some business doing at a little less than the lower figure. The demand fo rlath at Boston has been dull for several weeks, and prices are inclined to be easy. For 1⅝-inch, the prices range from $3.85 to $4. For 1½-inch, the range is from $3.50 to $3.55.

Western Canada

The British Columbia demand for logs continues to be good. Graded fir and spruce logs are quoted by the B. C. Loggers' Association at $7, $9 and $12; camp run at $10, and cedar from $9 to $10. These prices are expected to continue for a month or two, when a further advance is looked for in the better grades. Independent logging firms say that the price of camp run logs varies from $9 to $11.

Common lumber is selling now at $13.50 net at the mills, and this price is expected to continue for some time. Many of the prairie buyers are holding off their purchases until later on, and this is expected to make the demand in March very strong. The shingle situation is still rather doubtful. Advances have been made of late, and in eastern Canada they have been fairly well maintained. At a recent meeting of the shingle manufacturers it was estimated that the actual "dead level" cost of shingles loaded on the car with all charges paid, was in no case less than $1.75 per thousand. In place of this, sales had been going on at a rate averaging $1.65. The result was that a number of operators closed their mills at once, and the diminution in production has already had a good effect. Stocks now, are not heavy, and improvement is looked for as soon as the building season opens. Bolts are selling at from $5 to $5.50. The two-dollar mark is looked for, for British Columbia shingles when the spring arrives.

Great Britain.

The lumber business at London continues within narrow limits and the uncertainty resulting from the elections is having the effect of preventing the restoration of business activity. Consumption buying is on the smallest possible scale and forward buying is proceeding on very cautious lines. At Messrs. Churchill & Sim's recent auction sale, 3 by 7 unsorted Quebec spruce was sold at £8 10s. and £8 5s. At Liverpool the passage of the political excitement has permitted business to resume its natural course. Spot values of spruce deals are unchanged but there is a strong tendency for c.i.f. values to stiffen, although there has been no improvement in the demand. Values for parcels by liners are firmer now than they have been since the beginning of the liner season and apparently are likely to remain so. It is expected that f.o.w. prices will be considerably higher. Quebec pine deals are quite firm in spite of a moderate demand. Stocks are being firmly held and it is expected that

Your Spring Requirements

We would like to quote you on yard stock or to submit you figures on special bills. We have long made a specialty of cutting special bills to order and have this down to a science. If you want work of this kind properly executed, try us.

We can furnish anything you need in White Pine, Norway or Fir—any length from ten feet to sixty feet.

Cleveland-Sarnia Saw Mills Co., Limited

SARNIA, ONTARIO

prices will advance gradually. There is a somewhat better demand for birch, particularly for planks, though the prices remain unchanged. The stocks are not too heavy but there is only a small variety of thicknesses, the majority being 3-inch, with a few 4-inch and 2-inch, and almost no 2½-inch. Stocks of logs are growing smaller and prices are improving slightly.

At Manchester the lumber trade is marking time, the weather having been greatly against trade. There is a hopeful feeling, however, in many quarters. Spruce is firmer. Scantlings are valued at £8 5s; 7-inch and 3-inch at £8 15s., and other sizes in proportion.

United States

The lumber trade has been moving rather more freely in many of the United States markets during the last fortnight. The satisfactory weather conditions have been to some extent the cause of a renewal of activity. Northern pine at Chicago has been only in fair demand, but is expected to become brisker shortly. Dealers report a number of inquiries. Prices remain firm for the better grades, while the lower grades are still rather dull. At Buffalo the demand for Northern pine is fair, but present yard prices are not considered very profitable. At New York the volume of business is rather light, but a gradual improvement is indicated by the orders received. New York stocks are light and wholesalers are looking for fair prices.

The hardwood situation at Minneapolis is characterized by an independent feeling among wholesalers, particularly in regard to the upper grades. Birch and basswood uppers are scarce and in good demand. Prices have advanced but the sales continue actively. Low grades are still dull. At Cincinnati there is a steady tone to the hardwood market, and transactions are fairly active. There is a good movement of red oak, quartered sawed and plain, and a steady increase in price is noticeble. At Buffalo, the hardwood trade is strong and higher prices are looked for. Quartered oak and high grade birch are selling well and there is a fair volume of trade in chestnut.

The hemlock outlook at Chicago is promising. At Buffalo, dealers report quite a good demand for hemlock. The price is well up to the list and no decline is expected. The market for fir, spruce and cedar at Chicago shows a firming tendency and prices are growing stronger regularly. The Buffalo trade in west coast products is improving right along. The best demand is for Washington fir. The yellow pine trade at Chicago is improving and there is a fairly active demand for special stock, while the railroad and car stock demand is responsible for a large volume of orders. Shingles and lath at Chicago are doing fairly well. White cedar shingles are steady, with a tendency to improve. Red cedar shingles are rather quiet and unchanged. Lath continues scarce, with the manufacturers regulating the price.

Market Correspondence

Ottawa Manufacturers Asking High Prices

Ottawa, Feb. 10—The independent attitude of the lumber manufacturers in respect to prices for the cut of 1910 is giving much concern to middlemen who are looking around for supplies for the coming season. It does not appear, that outside of deal, many large contracts have yet been closed for the output of mills along the Ottawa river for the approaching summer. This is by no means the sign of a dull season, but quite the reverse. Mill owners are holding on to stock more firmly than at any other time since 1906. One producer of some 20,000,000 feet a year was offered a considerable advance on last year's prices for all pine better than shipping culls, but he replied with quotations amounting to 15 per cent. advance on the better classes and at least from $2 to $3 per thousand of an increase on all lines. A middleman who refused to buy at this advance, told the "Canada Lumberman" that he was not sure whether he would be able to get stock at better rates, but that so far the increases seemed too steep. Buyers from the United States have spoken encouragingly about conditions across the border and are doing a lot to make local dealers satisfied with the stiffening quotations. J. R. Booth has been approached by many agents, and he has a lot of lumber upon which the price has not yet been settled. His prices for 1910 will have a steadying effect on the market, and other producers of smaller quantities will then close contracts speedily. At this time last year buyers were able to get slight reductions on upper grades compared with the previous season, but now the reverse is the case. Many dealers have paid $10 more for one-inch good sidings and strips in the last week than they did a year ago. There is an all-round advance of $5 a thousand on nearly everything better than shipping culls. Many orders are refused by middlemen who cannot get the stock.

A leading manufacturer of Ottawa, in an interview with the "Canada Lumberman," expressed regret that there was an evidence of mill owners over-estimating the favorable market conditions and asking unwarranted prices. He fears reaction.

"While the outlook has been promising indeed," he said, "I am afraid some of them are too optimistic as to the boom. The chief danger in the way of the lumber trade is that both manufacturers and dealers are ready to believe that the best conditions are upon us. On this basis they are asking big advances for lumber on hand and for new cutting. The result is that the trade is now hesitating about buying. In the meantime should there be unfavorable legislation in the United States, either in respect of tariff or interference with the methods of companies and organizations, the full benefit of what promises to be a prosperous year in the lumber trade would be lost. The tariff situation is not the only one to be watched, for, more important to us, is the state of capital over there. Anything that would cause a panic would seriously affect the buying of Ottawa valley lumber. So I think it is a blunder to refuse some of the good prices offering now. I infer from correspondence with American buying houses during the last few days that there is a little uneasiness being felt already."

The sale of several large lots of box lumber and mill culls, amounting to a million feet altogether, by one of the Ottawa mills this month, has relieved the local market of some of its most burdensome stock. Some of this was sent to Montreal in 200,000 feet lots, and more was shipped across the border. There is, however, a considerable quantity of the 1907 and 1908 low grade pine not yet sold, and until this is disposed of there will be no substantial improvement in prices. The Montreal market is expected to buy heavily in three-inch plank for cheap house construction. The local manufacturers who sold dead culls last year for $13 delivered in Montreal, want a slight advance on that figure for the coming summer's cut. This quotation looks high to dealers who cannot dispose of stock on hand, but the brisk building season promised may make them change their minds. There are many orders for delivery of lumber after March 15th, the opening of the building season. An evidence of active building in store for Ottawa was shown in the January building permits, amounting to $60,000, or double the number for the corresponding month last year.

The increasing buoyancy in the lath trade is disturbing the plans of many speculators in that line of goods. Some have lost heavily by disposing of stock a month or so ago after holding it during a comparatively long period. No. 1 white pine has advanced a shade, and will likely go up to $4.25 before the new cut comes in. So many of the dealers are sold out that the market is in a very uncertain condition. Quotations are 50 cents higher than a year ago. With the exception of spruce mill run, which is made at 1½-inch, the stock is 1⅜-inch. The upper grades are especially scarce.

The demand among local builders for shingles shipped from New Brunswick is much stronger than for British Columbia shingles, but the shingle made in local mills is ousting both of these classes. It is claimed that as soon as Ottawa valley manufacturers begin to make a specialty of shingles, and not treat them so much as a side line, they will be able to hold the local market entirely for themselves. Dealers claim that Ottawa shingles are much better value than outside stock, but the latter, nevertheless, is in good demand.

The difficulty created by thaws all season were accentuated by the soft weather of the second week of February. The great damage to road making hinders operations. Very likely logs taken from the shanties in most of the camps will be fewer than was expected. J. R. Booth's shanties report that were it not for the couple of extremely cold days that preceded the last thaw their work would be seriously set back.

In his presidential address to the Ottawa Board of Trade on Feb. 1st, Mr. Peter Whelen pointed out the necessity for the speedy completion of the conservation works at the head waters of the Ottawa river. He said the construction of the Temiskaming dam was not proceeding rapidly enough to suit the lumber interests. The loss from the spring floods of 1908 and 1909 were at least half a million a year, and there should be no risk of having them again. The dams under construction will add, according to Mr. Whelen's estimate, 700,000 cubic feet per minute to the flow at the head of Lake Temiskaming. In all, eight dams are under contract to be built, at a total cost of half a million dollars.

Serious Logging Situation in New Brunswick

St. John, N.B., Feb. 9th, 1910—The most interesting feature of the situation in connection with the lumber trade and industry, is the stagnation in logging circles caused by the remarkably unseasonable weather which has prevailed throughout New Brunswick for the past fortnight. During that period the mercury was for many days above the freezing point. What snow there was disappeared with great rapidity; the frost came out of the ground; lumbering roads became impassable, and conditions generally were such as might be expected to exist late in the month of March or early April.

The effects of the long continued thaw have been far-reaching and most vital in their nature. The immediate result has been an almost entire cessation of logging operations throughout the province. In places where operations are being continued, the work is extremely arduous and expensive.

At this particular time, when the work of hauling off the yards is usually about to begin, the delay is of tremendous consequence, and unless there should be snow in the near future, the results will be such

(Continued on page 40)

Burns

A Lumberman from Ottawa Valley writes us as follows:

DEAR SIRS:

The Solid Tooth Saws I purchased from you last spring have been doing first class work ever since. I have never had any trouble with them. The Burns Saws are the best, as they are evenly tempered and will keep an edge longer than any other make of saw used here. Yours truly.

EDGINGS

Ontario

The estimates for the Crown Lands Department of Ontario show that during 1910 $25,000 will be spent for forest managing, $20,000 for forest reserves, and $20,000 for fire ranging.

The Arthurs Company, Limited, Powassan, Ont., have been incorporated with a capital of $20,000, to carry on the business of timber merchants, etc. The incorporators are J. N. Arthurs and J. Arthurs, both of Powassan.

The lumber yard on the corner of Hess and Stuart streets, Hamilton, Ont., which is 260 by 75 feet, has been sold to Mr. Wise, of Freelton, who has quite an extensive lumber trade and intends to open a large yard in Hamilton.

One of Dr. Fernow's staff of the Forestry Department of the University of Toronto has been called upon by Chancellor Boyd to assist the official guardian, Mr. F. W. Harcourt, K.C., in determining the need for cutting timber on an estate in Houghton township, Norfolk county.

The Rainy River Lumber Company have over 1,000 men at work in the woods in the district around Fort Frances, Ont. A well known lumberman states that there are 4,000 men in the woods in the Rainy Lake country, all tributary to Fort Frances, and that still more are wanted.

The condition of some of the lumber and railroad camps of western Ontario has caused much alarm. It is alleged that the typhoid epidemics that seized a number of the northern Ontario towns were caused by unsanitary conditions in the camps. An inspector of the Medical Health Board has been sent to the district.

The following new company has been incorporated in Ontario: Kingston Shipbuilding Company, Limited, Kingston, incorporated capital $500,000. Incorporators: W. J. Fair, insurance manager; H. A. Calvin and J. McKelvey, merchants, all of Kingston; J M. Smith, Collingwood, manager; Simon Dyment, Barrie, and A. McDougall, Duluth, Minn.

The Ontario Gazette reports the incorporation of the Munn Lumber Company, Limited, Orillia, Ont., with capital stock of $100,000. Incorporators: J. B. Tudhope, W. H. Tudhope, A. E. Munn and H. J. Bartlett, lumbermen, all of the town of Orillia. As noted previously this company is formed to purchase the business of the St. Anthony Lumber Company of Whitney, Ont.

Mr. W. C. Gloffatt, mayor of Orillia, Ont., has under consideration a plan for reforesting a tract of sandy land quite close to the town which is useless for agriculture. He proposes to secure permission from the Government for the town to buy this land and to plant on it red oak, poplar, spruce and similar quick growing trees, out of which the town could make a profit in the course of about twenty years. The town of Collingwood also have under consideration a similar plan.

A conference has been arranged between the officers of the Railway Commission, the Canadian Lumbermen's Association, and the railways, to adjust some points arising out of the protest of the lumbermen against an increase in freight rates. The matter has been in the hands of the chief traffic officer of the commission to work out a new tariff, and he has succeeded pretty well, save for certain points. It is not desired to argue all the case over again. After the conference the new tariff will probably b announced in a short time.

The water commissioners of the city of Guelph, Ont., are undertaking to reforest 168 acres of farm land where the springs, which are the source of the city water supply, start from the side of the hills at Arkell, four miles out of the city. Some of the land will reforest itself and the rest will be planted with white pine and other select trees which are being obtained in Germany. By this means the city hope to protect their water supply, to provide an attractive forest park, and also to make money out of the timber in years to come. The cost is placed at $8 an acre.

Mr. M. W. German, M.P. for Welland, and Mr. E. N. Lewis, for West Huron, Ont., who have resolutions standing on the order paper of the House of Commons, the former's to prohibit the export of pulp and pulpwood, and the latter's to place an export duty upon them which may be abrogated in favor of any country which admits Canadian print paper free; held a conference recently with members of both parties in the House who are in favor of their views. It was decided to bring up the resolutions for debate on Feb. 21st and to insist upon a vote.

P. P. Elliott, timber contractor, Fort Frances, Ont., has opened an office in the postoffice block, recently vacated by the Telephone Company. Mr. A. L. White, late of Mackenzie & Mann's office, Winnipeg, is in charge. Mr. Elliott has a contract to take out 250,000 ties for the Canadian Northern Railway Company, and has several camps at Banning now cutting. The Northern Construction Company have a contract to take out 400,000 ties for the same company and have a number of camps in north and west of Banning. These two large contracts make things pretty lively in the woods at that point, there being over 1,000 men employed.

Eastern Provinces

Brodeur & Company, lumber, St. Hugues, Que., have registered.

The Emile, sawmill proprietors, Montmagny, Que., have sustained a loss by fire.

The Austin Lumber Company, Cap St. Ignace, Que., office fixtures, etc., to be sold 8th inst.

Monette, Cardinal & Company, builders' materials, Montreal, Que., it is stated, have dissolved.

W. Girardin, fils, lumber merchant, St. Edwidge, Que., and L. Valerie Foucher have registered.

Geo. Moore & Son, general store and lumber, Lisgar Station, Que., it is stated, will sell their assets.

The sawmill of Mr. A. Beaumont, near St. Augustine, Que., was recently destroyed by fire, causing a loss in the neighborhood of $6,000.

The Canadian Dart Company, Limited, of Montreal, Que., have been incorporated with capital of $50,000 to build, construct and equip public and private works, to erect, hold, etc., manage and dispose of timber limits, saw-

mills, stone quarries, etc. The incorporators are: W. Dart, civil engineer; F. H. Jefferson, engineer, and W. H. Brunning, architect, all of Montreal, Que.

Lieut.-Governor Tweedie will open the convention of the Canadian Forestry Association which is to be held in the Legislative Buildings at Fredericton, N.B., on Feb. 23-24. Two sessions will be held daily, one at 9.30 a.m. and one at 2 p.m.

The Riordon Paper Company, Limited, Montreal, Que., have been incorporated with capital of $6,000,000, to carry on the business of lumbering, etc. The incorporators are G. W. MacDougall, K.C.; L. Macfarlane and Chas. Pope, advocates, all of Montreal, Que.

The Fletcher Pulp & Lumber Company, Limited, Sherbrooke, Que., have been incorporated with a capital of $300,000. The incorporators are C. H. Fletcher, R. A. Ewing, R. H. Fletcher and Harold Bruce Fletcher, lumbermen, all of Sherbrooke, and J. W. Parker, lumberman, Portland, Maine.

Forty employees of A. E. Hamilton, St. John, N.B., have offered to work two weeks, and forty more one week, without wages, to aid in rebuilding his woodworking factory which was destroyed by fire recently. Mr. Hamilton has not decided whether to accept the offer or not, though his loss was heavy, but he will rebuild the factory.

The sample rolls of paper manufactured for Lord Northcliffe's publications at his mills in Newfoundland, were utilized in printing part of the edition of the London, Eng., "Evening News" on Jan. 27, and the test declared it in every way successful. The paper was tried under the strictest practical conditions, and pressroom experts declared that for all purposes of newspaper printing the paper from Grand Falls was as fine as any they had used in their experiences.

The annual business meeting of the Nicolet Falls Pulp & Lumber Company was held at Danville, Que. Satisfactory reports of the operations of the company for the past year were received. The officers elected for the ensuing year are: O. Vilandre, president; B. Quinn, vice-president; F. B. Chadsey, treasurer; O. Lamoureaux, secretary, with the following board of directors: F. N. McCrae, Sherbrooke; Philias Milette, Windsor Mills; J. H. Crepeau, St. Camille; E. W. Tobin, M.C., Bromptonville, and J. E. Lepine, St. George de Windsor.

The E. B. Eddy Company, Hull, Que., have under consideration a plan for the establishment of a new plant in northwestern Ontario. The only town which so far has been named as a probable location is Fort William. The new plant would manufacture entirely for the markets of the western provinces. The company already have a large warehouse at Fort William, and on account of their increasing business the present plant at Hull has during the last few years been taxed to its limit. It is planned to produce in the new factory matches, paper and fibre ware for the western market, and the Hull plant will then be better able to handle export trade.

A St. John, N.B., despatch states that Hon. Charles E. Oak, of the Miramichi Lumber Company, says that his company have at the present time more than 1,000 men working in the Miramichi lumber woods. They expect to cut about 26,000,000 feet, or 4,000,000 feet more than last year. He reports, however, that the recent soft weather has greatly hurt operations in the woods. Hon. Mr. Oak is considering an offer of the position of manager of the New Brunswick Railway Company's lands. The New Brunswick Railway Company owns 1,000,000 acres of lumber lands in York, Carleton, Victoria and Madawaska, granted by the King Government as a railway subsidy in the early seventies.

Western Canada

The Bowman Sine Lumber Company, Limited, Herbert, Sask., have been burned out.

J. C. Graham Company, Limited, sash and door manufacturers, Winnipeg, Man., have increased their capital from $50,000 to $100,000.

Wm. Cooke & Sons, Limited, Crossfield, Alta., have recently bought about 30,000,000 feet of timber in a limit near Abbotsford, B.C., which they are preparing to operate.

The Saskatchewan Provincial Government are co-operating with the Dominion Forestry service in the matter of setting aside forest reserves, and an amendment to the Game Ordinance Act is under consideration setting apart the Dominion forest reserves, known as the Beaver Hills, the Pines, the Moose Mountain and the Porcupine Reserve as game refuges.

A prominent Japanese merchant, named Mr. Tenda, of San Francisco, while on a visit to Vancouver recently stated that he believed that the markets of Japan in the future would take great quantities of British Columbia timber and paper.

The Dominion Government is sending out Mr. Fred Axford, homestead inspector, to Fairford Mission, 200 miles north of Winnipeg, to arrange for homestead entries by settlers and to report upon a large area of Government timber land in that locality.

The North Star Lumber Company, whose property is located in the Crow's Nest Valley, are planning for the immediate construction of a large new sawmill. Mr. John Hanbury, of the company, recently made an inspection tour of their property with the object of arranging details in connection with this work.

The Alberta Government have refused to issue a permit to the Empire Supply Company, of Edmonton, contractors for the supply of ties and bridge timber on the Alberta & Great Waterways Railway, to cut timber along the right of way for such purposes, and have threatened to impose a fine of $3 for every tree cut.

The Fraser River Mills, Fraser Mills, B.C., will appeal to the Department of the Interior in connection with Crown timber leases held by the company and affected by the projected construction of the Stave river dam by the Western Power Company. The company, in common with the E. H. Heaps Company, of Vancouver, and the Brunette sawmills of Sapperton, have been given notice to clear the timber off a portion of their leased lands near Stave lake by April 1st, 1911.

A deputation representing the British Columbia Loggers' Association is proposing to the Government the necessity for making several changes in methods of scaling and having easier examinations for donkey engineers. Another matter which will be urged is that any genuine logger be permitted to stake small tracts that were overlooked in his original staking. Many of these small tracts can be profitably logged in connection with adjoining claims where it would not be profitable to log them unless with larger claims.

as cannot now be readily estimated. With the delay already experienced, the volume of the winter's output of logs is already materially curtailed. Contractors in all parts of the country have already suffered severe losses and in many cases have taken out their crews. Portable mills have been compelled, in many cases, to suspend operations owing to the inability of the teams to get logs to the mill because of the lack of snow, and for the same reason much delay is caused in the moving of manufactured lumber from the mills to the railroad.

In some of the southern portions of New Brunswick there has been but one week this season when there was sufficient snow to make hauling possible on the logging roads. While at the head of the St. John, on the Restigouche, and in the northern sections generally, conditions have been somewhat better than this, there has been a great deal of unfavorable weather and the season, particularly during the past fortnight, has been an extremely difficult one for the loggers.

The attention of dealers and manufacturers is turning more than ever to the "English" deal trade. When business has settled down after the elections are at an end, it is confidently expected that changes will materialize, probably with rapidity, in the spruce deal trade as well as in other lines. That trade and business generally have been dull while the elections were pending was usual and natural, and that a change will now take place is to be expected.

The sentiment in regard to "English" spruce deals has been, particularly during the last few weeks, indicative of greater confidence. Greater firmness is consequently an accomplished fact, although no important increase or advance in prices has yet materialized. The gain has been slow and steady and it may now be safely said that the outlook for this line of goods is more promising than has been the case at any time during the past two or three years. It is expected that the poor prospects for the getting out of a cut of any importance at the portable mills will be apt to have an effect upon the local prices of "English" deals.

An enquirer would be quoted not less than $15.50 and probably as high as $16. on a specification of "English" spruce deals containing say. 50 per cent sevens and eights, 35 per cent. nines, balance elevens and wides, f.o.b. St. John. At present writing the available local stocks of "English" deals are fairly heavy. Five and one half to six millions of feet would cover the quantity.

Bad Weather in New Brunswick

The present unseasonable weather is playing havoc with the lumber industry of Nova Scotia, and the cut will only be about 60 per cent. of the estimate, according to the opinion of a well known lumberman. The cut for the province was estimated at over two hundred millions, but owing to the soft weather it is feared that only about one hundred millions will reach the market. The loss to the province will be nearly two millions and the direct loss to the operators will be nearly a million. Even if cold weather sets in now the loss cannot be made up, as the cut so far this season is not up to the average. This is due to the fact that owing to the lack of frost the men have only been able to cut on high dry ground, work on the low land having to be abandoned.

Operators who have mills in the woods will not fare so badly as those who have long hauls, as they can twitch their logs a short way and convert them into lumber, while those who have long hauls to the rivers will have to wait for frost and snow. A large number of lumbermen have contracted to deliver their stock at the railway station during January and February, and many have already broken their contracts and stand to lose heavily. Fearing a scarcity, the English and American importers have already advanced prices, and if the present weather continues much longer the men who are fortunate enough to have a supply on hand are sure to make up for the low prices of the past few years.

The Lumber Mutual Fire Insurance Company of Boston, in their finincial statement recently presented, show a net cash surplus of $387,722.73. Their cash assets total $576,184.59, and their contingent assets amount to $982,834.59, making the total assets $1,559,019.18. The amount of insurance in force at present is $13,807,933.82, the premiums upon which amount to $327,611.53. During 1909 the losses amounted to $82,760.03, and dividends to policyholders amounted to $110,036.44. The gain in the net cash surplus for 1909 was $83,634.41. From 1895 to 1909 inclusive, the total losses paid to policyholders amount to $600,457.24, and the total dividends paid to policyholders amount to $505,383.05. The company is now paying dividends to policyholders on terminating policies at the rate of 40 per cent.

At the recent annual meeting of the British Columbia Loggers' Association the following officers were elected: President, C. A. McKinnon; Vice-President, J. A. Smith; Secretary-Treasurer, D. J. O'Brien; Executive Council, Messrs. Kiltz, J. O'Brien, Magneson, Dempsey, Wilcox, D. A. Smith, Black, Patterson Buck and Norton. The following were elected members of the association: Messrs. Harland, Joliffe, Parks, J. B. Dugan, C. B. Dugan and H. D. Blackford.

We are in the market

for all the "For Sales" of every kind that you have, and we can sell them all for you.

Do you want to Sell some Lumber?
Do you want to Sell some Machinery?
Do you want to Sell a Business Opportunity?
Do you want an Employee?

If you have nothing for sale you MUST want something.

A small advertisement in our "WANTED AND FOR SALE" DEPARTMENT will do the trick.

A trial will convince you.

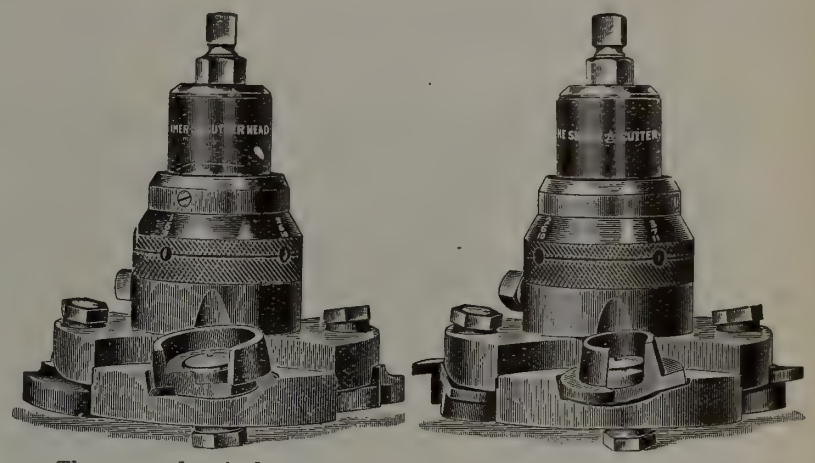
Practical Suggestions for Woodworkers

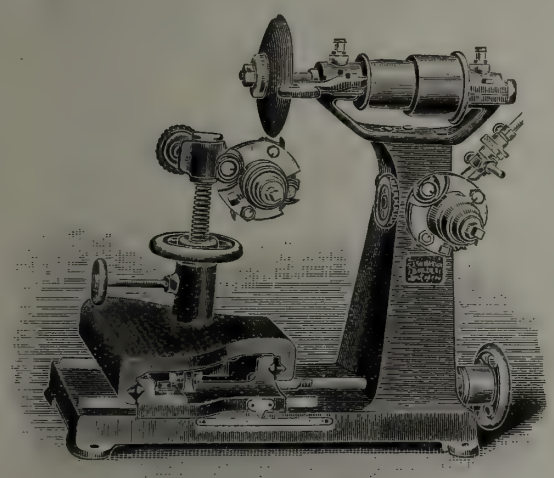


Planing Mill Activity

means profit to you. Idle machines spell L-O-S-S. The wheels have to go round and round in order to earn dividends on your investment. We understand your requirements and are organized to meet them.

Shimer Cutter Heads

keep the machines going by doing away with the tedious and costly filing to shape at each sharpening of the cutters, also the adjusting of the cutters by the old slow process when changing from one kind of wood to another. This, and more, the make-ready built into Shimer Cutter Head takes care of.



May we send you full particulars and prices of these tools? You will find much to interest you.

These popular tools are the "Best of All" Shimer Cutter Heads, the Bits of which are held securely within conical duplex bit seats. The "vise like" grip of our fixed bolt and nut assures rigidity and strength for all emergencies, in the working of every kind and variety of cross-grained and knotty lumber.

Price with	4	bits to each head, the set, as cuts above,			$40.95
	6	"	"	"	49.27
	8	"	"	"	57.60

Complete with Flooring Bits. The Heads will also receive Bits for thin Ceiling—⅜ at $1.05 each and Bits for 2" thick plank at $1.33 each.

Bit Grinding Machines

For sharpening Bits tempered too hard to file, and to lighten and hasten the work in the filing room, we make two styles of Grinding Machines.

No. 1 is a strong and complete machine with every needed adjustment. Price, net, with countershaft, f. o. b. Milton, Pa., $104.00.

No. 2 machine is lighter, yet sufficiently strong to meet the average need. Price, complete, $45.50 net, f. o. b. Milton, Pa.

Our Bedee Knives

recommended by users as the best thin steel knives on the market, can be furnished in any length or thickness on short notice. Write us about your requirements.

Expanding Dado Heads

These tools are arranged with Circular Bits and saw spurs for edging up the square shoulder of the groove when cutting across the grain of the wood. The Bits will expand to nearly double the thickness of the narrowest groove they make, and with wider or thicker Circular Bits their range of expansion is readily increased up to 2" or more. We make them to fit any saw mandrel, long or short. Price, complete, 8" diameter or less, net, $21.45.

Our Beading Machine

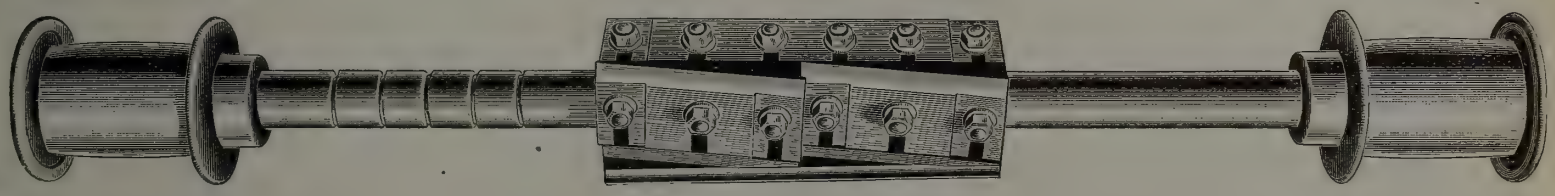
with milled bits applies to any four-sided cylinder. It is carefully made to fit into the slot of the head side and fastens firmly the knife and attachment with a single bolt.

Price (2) Attachments with Bits complete, net	$5.20
Extra Bits, each	1.30

The Shimer Cutter Head for O. G. Batten and Siding

These heads are especially designed to work O. G. Batten or O. G. Siding, having three circular cutters in line of the cut, seated and firmly bolted to one side of the head flange.

We make them to suit any matcher or moulder. They turn out O. G. Battens as regularly as our matcher heads work tongue and groove flooring. Give measurements same as for flooring heads; or, if flooring heads are already in use on your machine, give their record numbers, and send a cross section of the batten—wood sample or drawing.



Price for each Cutter Head, without bits, $9.75. O. G. Batten Bits to mould ¾" deep or less, net each, $2.08.

Door, Sash and Coping Tools

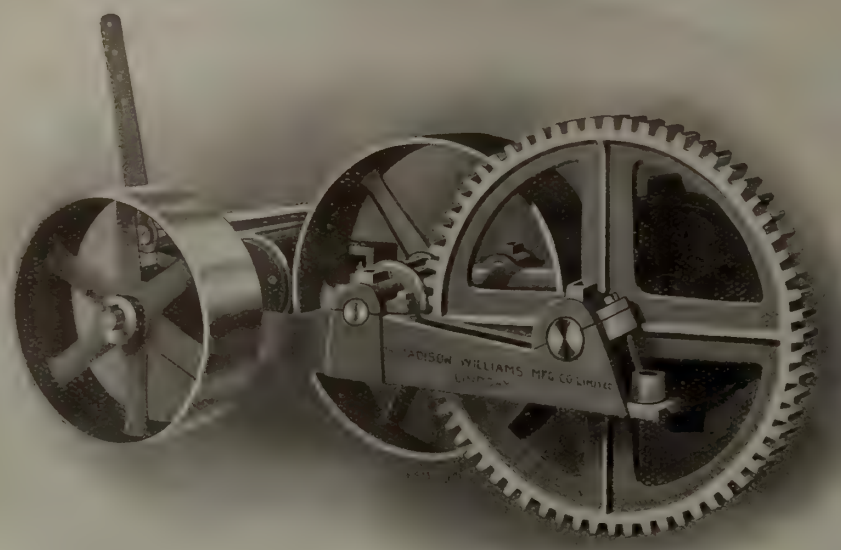
That save all the hand fitting. No changing of patterns, therefore, no trouble in framing the door and sash parts when they are matched up with the Shimer Cutter Head. We relieve you of that detail of the business, when we place the mould in counterpart within the contour of the Bits. The Bits are filed only to sharpen and being set by means of a gauge give accurate and uniform results. Prices very reasonable.

The Shimer Reversible Cutters for Single Spindle Shapers, Variety Moulders or Friezers, are carefully moulded opposite to the shape of the mould to be produced, in such a way as to have only the cutting edge touch the lumber. They are complete—inexpensive—time saving. We also make One-Way Cutters for the Double Spindle Shaper.

The Shimer Shear Cutting Cylinder

Made to fit any Planing and Matching Machine, Saves Power, Material and Labor, besides putting a smooth surface on the lumber. The cut is made with first one knife shearing the chip in one direction across the face of the board, and is followed by the next knife which shears the chip in the opposite direction. This distribution of the work reduces jars on the machine and belts, gives smooth action, and results in better work.

Send for further information, and let us quote you prices. With your inquiry give us the length and diameter of your cylinder, stating whether you use one or two drive pulleys.



SEE THAT YOU GET THE GENUINE

Look for the NAME and TRADE MARK **"The Shimer Cutter Head"** stamped on every Head we turn out. A dealer who would sell you an imitation means to deceive you—send them back and demand the genuine article with our guarantee for your protection.

Samuel J. Shimer & Sons Galt, Ontario, Can.

Branch of Milton, Pa.

Our Log Jack is a Great Favorite

This cut represents our

Results Are What Count

The uppermost leg of this jib has a spring connection to the tower that reduces shocks.

All strains due to skidding are absorbed by the guy lines. The swinging boom is operated by wire ropes passing through sheaves suspended from a steel frame projecting from tower and leading to two drums on loading engine, controlled by one lever. Machine is raised or lowered by hydraulic or patented geared jacks. Built for 2 or 4 lines, with stiff or swinging boom, constructed entirely of steel, except loading boom.

This machine is without question the strongest and fastest machine of the day.

A Combined Skidding and Loading Machine that will clear up the largest area at a setting and can be moved and set up ready for business in the shortest possible time will get the best results. The latest Russel machine has some distinct improvements that save time and trouble, consequently money. Note the new method of suspending skidding sheaves, they are hung from a vertically hinged jib or triangle, the outer end of which is guyed by two lines one on each side, which are power-tightened and can be set while skidding lines are going out. The guy lines lead back so they do not interfere with skidding or loading.

Are Your Boilers Overloaded?

If so, your cut is not what it should be

What Disposition are You Making of Your Sawdust, etc.?

Why don't you run your mill with it?

Are You Burning Your Slabs, etc.?

Why not sell them instead?

The old reliable Gordon Hollow Blast Grate increases the efficiency of a boiler 25% to 50%; gives as good or better results with wet, green or frozen sawdust as a draft grate gives with dry wood; saves labor in firing; and is practically indestructible.

Sold on Approval. Thirty days' trial given. We pay the freight both ways, if rejected.

Adapted for either sawdust or slabs, for plain furnaces or Dutch ovens, and for any number of boilers, from one up.

No change in construction required.

Easy to install.

Can be fired on when the boiler is idle.

We will submit a proposal upon receipt of the following data:

How many boilers have you?

Have you furnaces or ovens?

What are the width aud length of your grate surface or surfaces?

Style "B" for Mill Furnace

The Improved Hot Blast Grate

develops more heat from green, wet or frozen sawdust or mill refuse, than an ordinary draft grate develops from wood or coal. The most modern and economical grate on the market. Increases steaming power of boiler 50 per cent.

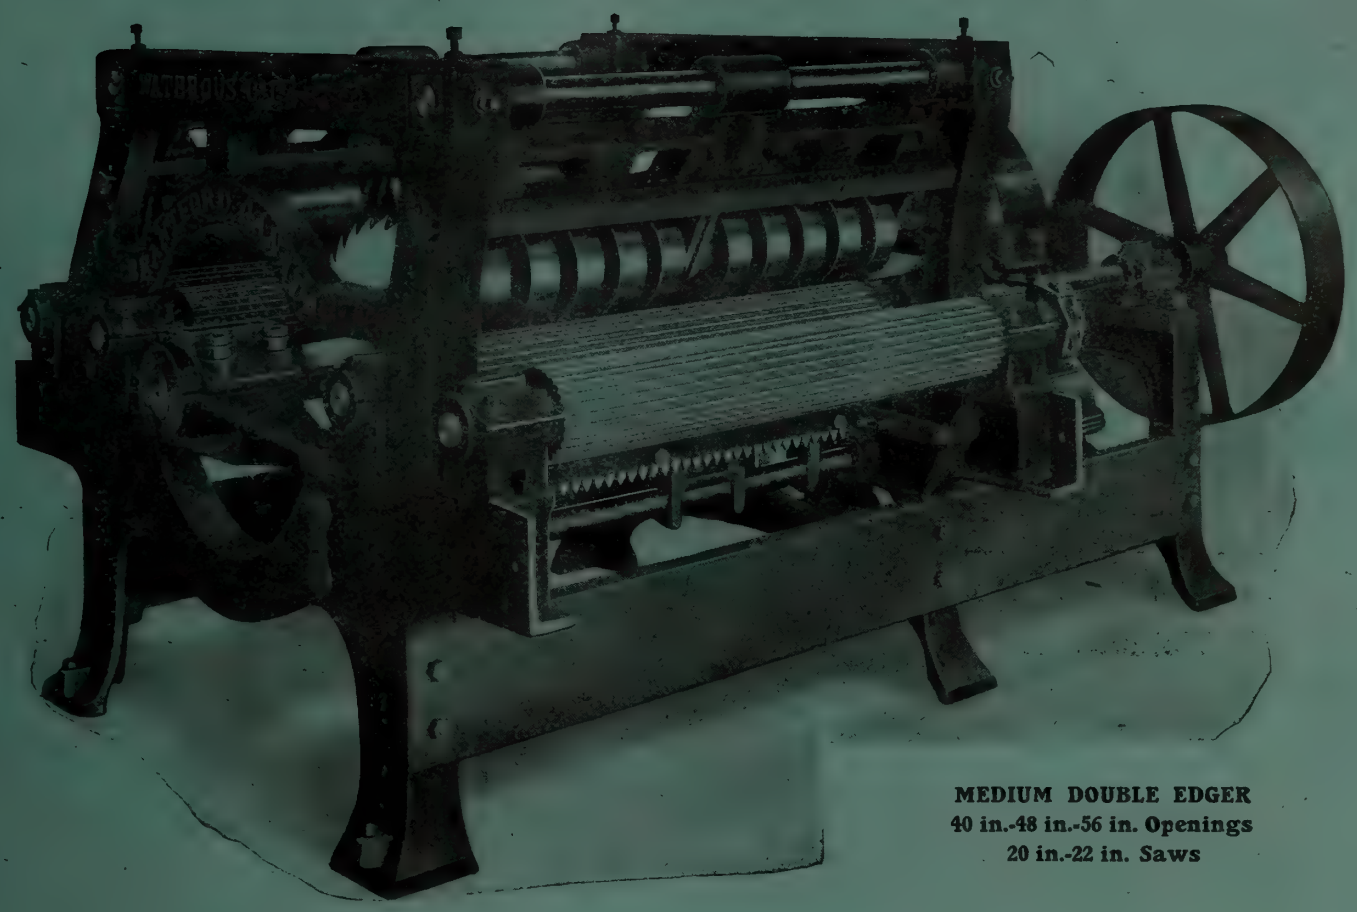
We are the sole manufacturers for Ontario, Quebec, and the Maritime Provinces for this grate. It will save you money regardless of the kind of fuel used.

We will ship our **Hot Blast Grates** to any reliable person or firm on 30 days' trial, to be returned at our expense if not as represented.

Catalogues sent and full information cheerfully given on application.

The E. Long Manufacturing Co., Limited, Orillia, Ont.

Represented as follows:



Maritime Provinces — **Geo. H. Evans, St. John, N. B.**

Province of Quebec — **Williams & Wilson, Montreal, Que.**

Manitoba and Western Provinces — **Stuart Machinery Co., Winnipeg, Man.**

British Columbia — **H. W. Petrie, Limited, Vancouver, B. C.**

Suitability

MEDIUM DOUBLE EDGER
40 in.-48 in.-56 in. Openings
20 in.-22 in. Saws

You wouldn't file a saw with a manicure set—neither would you use a hand machine to edge 8 in. and 10 in. Cants.

If you are running light stock on a heavy edger, half your machine is idling—you are wasting floor space and you are not getting full returns for your investment. On the other hand, if your machine is too light for your work—you are forced to crowd it—your saws will heat and bind and your lumber will be snaky and uneven—you suffer in both cases.

LIGHT DOUBLE EDGER
18 in. Saws-30 in. Opening

We have had 60 years experience as Canadian Saw Mill Mill Builders. We manufacture a complete line of Edgers—hand, light, medium and heavy style—varying in size from 30 in. to 96 in. opening. No matter what stock you are handling, we have the Edgers—in style and size—most suitable for your work.

Our Bulletins on request.

PETERBORO ONTARIO

Combination Gang Edger

On this machine you can put cants up to 8 inches thick through a cluster of saws and do your edging at the same time.

It is also largely used for making flooring from small cants.

It helps you solve the small log problem.

On one side there is a battery of as many fixed saws as required, and the other side is arranged as an edger with movable and stationery saws.

Both the feed and press rolls are divided and the feed rolls on gang side can be run at any speed independently of speed of edger rolls.

There are two driven fluted feed rolls in front and two in rear of saws.

The top press roll behind saws is driven and is equipped with safety device so that lumber cannot fly back.

Reliable Veterinary Remedies

No logging outfit is complete without a supply of reliable veterinary remedies. Getting the wrong kind means the loss of the use of your horse when time is valuable.

JOHNSON'S VETERINARY REMEDIES
are guaranteed never to fail when used as directed. You get your money back if they ever do.
They are

Johnson's Horse Liniment No. 1.
A penetrating Alcoholic Liniment. Put up in one gallon jugs, with full directions, per imperial gallon $4.50

Johnson's Horse Liniment No. 2.
A combination of the best oils used as liniments, imperial gallon $3.00

Johnson's Horse Colic Remedy.
A sure and speedy cure for colic Imperial gallon $5.00

Johnson's Veterinary Healing Ointment.
Positively the best all-round healing ointment made. In use by the largest owners of horse flesh in Canada.
Put up in 2 lb. tins, each $2.25 or in ¼ lb. tins, per doz. $3.50

Johnson's Condition Powders. (Concentrated).
Put up in bulk, per lb....30c.
These goods being put up in bulk are more economical than others, as cost of bottling, etc., is saved.

CAMP REMEDIES.
In addition to our Veterinary Remedies we make a line of medicines for lumbermen, including a strong, penetrating liniment, healing ointment, cholera cure, liver pills, cough syrup, in fact anything in the form of Camp Drug Supplies. We know that there are no better remedies made than those we offer. There may be others nearly as good, but they lack our guarantee. Satisfaction or money back. A trade discount of 10 per cent. allowed off all orders amounting to $100. (Send postal for printed matter.)

Pine Doors

We have long appreciated the fact that price is not the only requisite a dealer must seek in placing his order for doors. Poorly manufactured doors can scarcely be considered a bargain at any price.

Door Making is our Specialty

We have equipped our plant with the best door machinery made, and we are turning out doors that **are right in quality and right in price.**

Our doors need no commendation. They prove themselves. They are business builders for every dealer who handles them.

If you have not received our latest quotations on Doors, Sash, and Interior Trim, write us to put you on our mailing list. It will be mutually advantageous.

Light Portable Mills — **Edgers and Trimmers**
Light Portable Engines — **Shingle and Lath Machines**
Heavy Engines and Mills

Our saw mills will do just as accurate and perfect work as any mills made. There are no kinks or twists in the lumber sawed by our mills, and it sells at good prices. Write for cataloue and quotations

Head Office and Works - - SEAFORTH, ONTARIO

The Sturdiest Planer of them all is the Hespeler No. 31

The sooner you order a Hespeler No. 31, Heavy Duty Double Cylinder Endless Bed Planer, the sooner you'll profit by the good work it does.

No prospective buyer will be disappointed if he looks carefully into the merits of this planer. It acknowledges no superior in either the United States or Canada; it is guaranteed to stand the heaviest work, and has a capacity far beyond the ordinary machine. It is 26 inches in width and will take timber 14 inches in thickness. All the upper works are so arranged that a cut 1 inch thick can be taken by the top cylinder.

We strongly advise those who contemplate purchasing a machine of this character to get in touch with us immediately. Full description sent on request.

If there is a probability of your needing any woodworking machinery during 1910, you ought to send for our new catalogue showing nearly 50 up to date types of high grade wood tools.

Our machines are at all times in stock or under construction. Reasonably prompt deliveries assured to purchasers in all parts of Canada. Direct shipments by C.P.R. or G.T.R.

The Hespeler Machinery Co., Limited

Hespeler, Ontario, Canada

The above cut illustrates various styles of teeth for circular saws made by the Disston Establishment.

Circular Saws

We have been helping millmen solve their sawing problems for nearly three quarters of a century.

Whatever your timber or climate may be, we have had experience with similar conditions and have created a Saw that will do your work at the minimum expense of time and labor.

We will not only sell you Disston Saws, but at the same time give you the benefit of Disston experience in every part of the world, with every kind of timber that's cut.

Steel for all Disston Saws is made by a special process in our own plant.

If you have the slightest delay in getting a supply of the DISSTON Line of Saws, Tools or Files, please notify us.

DODGE

Elevating and Conveying Machinery

We manufacture a very complete line of Machinery for the handling of Materials of all kinds economically

Belt Conveyors, any length, any capacity.

Bucket or **Cup Elevators,** any capacity.

We are headquarters in Canada for

Chain, Sprockets, Take-ups, Head Pulleys, Car Pullers, Friction Hauls, Belt Tighteners, Rope Sheaves, Gearing all kinds, Friction Clutches, Manilla and Wire Transmission Rope, Car Pullers, &c., &c.

Send for our B7 Catalogue, also Chain and Sprocket Catalogue.

Dodge Manufacturing Co.

Toronto and Montreal

See the Endless Chain Moving in Planed Ways in the Table ?

THIS CONSTITUTES OUR

EDGING DEVICE

which is driven by a sprocket chain and gearing from the same shaft that runs the feed rolls, thereby carrying the stock straight across the table, leaving a true, straight edge.

If you want to use the machine, just as a Band Rip Saw, the movable chain adjusts slightly below the surface of the table, where it remains inactive and out of the way.

The above machine is called our **No. 202 Band Rip and Edging Saw.** It has all the well-known features found on all our late Band Sawing Machines, viz.: Solid Lower Wheel, Knife-Edge Straining Device, Square Form of Column, etc.

Capacity : Will rip material 24 inches wide and 12 inches thick.

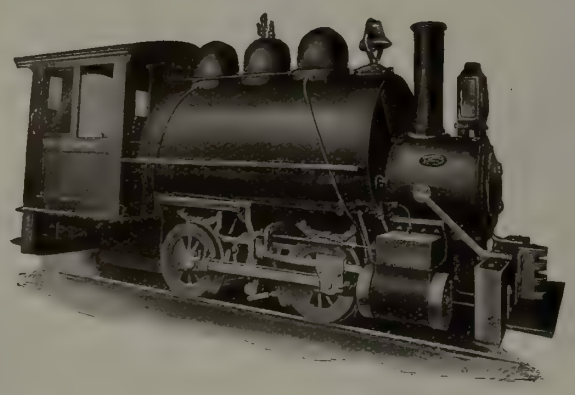
SIMONDS

Inserted Point Saws

Made in Montreal



Are you buying a new saw this winter? Then listen to what some other mill men say about the Simonds Saw. We quote from their letters. "As near perfection as one could be made for our mill." "Miles ahead of any other—would not take $100 in gold for it." "Our favorite saw in the mill." "First class, works fine." "Runs equally well winter or summer." "Your saws have proved the best I ever used." "It's the only saw I can get to stand up in frozen timber."

Some of our friends may be over enthusiastic, but there you have their own words. Isn't it enough to cause you to hesitate and learn more about the Simonds before buying any other make? Really he who uses this saw profits much more by it than do we in selling it. You have more to gain than we.

An attractive little booklet fully describing these saws can be obtained by addressing our nearest office.

TERMS OF SUBSCRIPTION:

Canada, United States and Great Britain, $2.00 per year, in advance; other foreign countries embraced in the General Postal Union, $3.00.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For Manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Vol. 30 Toronto, March, 1, 1910 No. 5

Maximum Tariff—Canada's Position

As March 31st—the date for the imposition of the maximum tariff by the United States—draws nearer, the position of Canada in connection with the situation becomes more interesting. The stand taken by the United States is not one which will please Canadians until it has been definitely proved that it is not hostile to Canadian interests. Upon its face the attitude of the United States is neighborly enough, but it is open to two interpretations, and the proper position for Canadians to assume is one of dignified indifference.

President Taft's secretary has addressed a note to the British Ambassador at Washington expressing the desire of the United States to take up negotiations for an adjustment of tariff relations with Canada. It is to be presumed therefore, that the Canadian Government will soon have the matter before it. The note as reported by the press has been variously construed. It is considered in some quarters to be a neighborly notification of a desire to open negotiations. In other quarters it is subjected to suspicion and declared to be in the nature of a dictatorial order for Canada to show cause why she should not be subjected to the maximum tariff. It does not make a great deal of difference, however, what interpretation is placed upon the note. Canada's position is a passive one. Canadians have only to sit tight until the United States show their intentions. It would be lacking in dignity on Canada's part and a dangerous bit of policy also to do anything but afford to the United States a courteous and fearless treatment. The situation is purely one of the United States' own making and they must be the ones to find the solution, with the aid of whatever assistance Canada can reasonably give. If they see fit to penalize Canada for what they man consider to be "undue discrimination," Canada's time for action will have come.

Considering the trade situation as a whole, there is nothing for Canadians to be seriously concerned about in regard to the tariff. Canada is a pretty good customer for the United States, and that country will think long before opening tariff hostilities with us. During the nine months ending with December 31st, Canada imported from the United States, goods to the value of $161,012,916, and during the same period the United States bought from Canada goods to the value of $86,348,264. The balance of trade was in favor of the United States during those nine months, to the tune of $74,664,652, or nearly as much as the total purchases of the United States from Canada. This balance must have gone into the United States in the form of coin, or credit upon which interest is to be paid, and the United States will certainly hesitate before interfering with such a source of wealth. As a nation of buyers, moreover, Canada is growing rapidly, and the United States, which is above all things, a nation of sellers, will be quick to realize the importance of encouraging a good customer.

If the United States imposes a maximum tariff against Canada it is their own concern. Canada has a long and strong tariff arm, and can strike a strong blow whenever necessary. Germany has found this out of late, and has cried "peace" after a decade of fruitless struggle. The United States is a big country, but Canada is a country of self-reliant independent people, who will stand together and maintain their right to deal with other countries individually, on the merits of each particular case. If the United States wants treatment from Canada on the "most favored nation" basis, it must treat Canada in the "most favored nation" fashion, which is very different from the treatment given in the past.

The lumber situation in Canada is one which it may be thought would suffer seriously if a tariff war were inaugurated between the United States and Canada. The exports of food and manufactures of wood to the United States during the eight months ending November 30th, 1909, were valued at nearly $28,000,000. During the same period the imports into Canada of wood and manufactures of wood from the United States were valued at a little over $7,000,000. The balance of trade was, therefore, strongly in favor of Canada, and it would be natural to suppose that if the maximum tariff were placed upon Canadian wood products entering the United States, the lumber business of Canada would receive a severe blow. This would perhaps be so to some extent, yet there are features of the case which should be borne in mind by all who desire to take a business-like view of the situation.

An example has recently been given of the working of an increased tariff by the case of shingles. Canadian shingles have been subjected to a duty of 50 cents a thousand instead of 30 cents, when entering the United States. For a time it looked as though the shingle industry of Canada would be greatly injured by this move. When necessity arose, however, new markets were found in Canada for the goods which could not be sold in the United States. Moreover, the manufacturers of the United States and their employees are now doing their best to secure for themselves as much of the 20 cents advance in duty as they can. The result is that Canadian shingles are finding their way back into the markets from which they were temporarily excluded. It is not to be presumed that Canadian lumber with an ad valorem duty of 25 per cent., added to the $1.25 per thousand already imposed, would sell so readily in the United States markets. It is to be expected, however, that with the extra protection given to United States lumber in the United States markets, manufacturers in that country will raise their prices as high as the consumers will allow. The markets of Canada will not then be so attractive as they have been, and yellow pine, which has flooded the Canadian markets during the last few years, will be a much less troublesome factor in Canadian trade. Canadian producers will find their own markets correspondingly improved.

There is the pulpwood situation also to be considered. Pulpwood is a necessity for the paper mills of the United States, and they cannot secure all they need from their own country. They must have Canadian pulpwood or their mills must close. In this matter Canadians have a strong position. Naturally the people of Canada want to sell to the United States the finished product, paper; instead of the raw material, pulpwood. If the United States desire to secure cheap paper there will

only be one way to get it. They will not be able to complain that Canada is treating them unfairly by protecting her own pulpwood resources and encouraging her own paper making industries.

Canada has given fair treatment to the people of France because France has shown an inclination to seek such treatment, and Germany has at last become reasonable and secured the removal of the surtax. The United States will be seeking their own interests best, by following a similar course. Canadian lumbermen have been told that they should use their influence to persuade the Dominion Government to prevent a tariff war. They should do nothing so foolish, but should back up the Government in taking an attitude of dignified indifference to the United States tariff measures.

Premium Payers Win Before Senate Committee

Lumber manufacturers in Canada will be greatly pleased with the report from Ottawa that the Senate Committee of Banking and Commerce have decided against the clause in the proposed insurance bill which provided for a tax of 15 per cent. upon premiums paid to foreign companies unlicensed in Canada. The insurance situation so far as lumber manufacturers and dealers of Canada are concerned has been greatly simplified by this action on the part of the Senate Committee. Ever since the insurance bill was introduced last session in the House of Commons the lumbermen of Canada and the premium payers generally have been offering their strongest opposition to this clause. In spite of their objections, however, the bill passed the House of Commons and was sent to the Senate. On account of the widespread objection to the 15 per cent. tax clause, it was then decided by the Senate to leave the bill over until the present session, so that a better idea could be obtained as to public opinion upon the subject.

The Senate committee has now decided firmly in favor of permitting Canadian policy holders to insure wherever they please. The question was taken up last week and the decision in favor of striking out the 15 per cent. tax clause was unanimous. Those who were opposing the clause hardly expected to meet with so much success. They believed that their case was a strong one, but hardly hoped for a unanimous verdict. That the committee have taken this view, will probably set the matter at rest for a long time to come. It is scarcely to be expected, after so decisive a defeat in the committee, that an effort will be made to re-insert the clause when the bill again comes before the Senate.

Lumbermen were greatly concerned in this matter. If they had been obliged to pay the tax of 15 per cent. upon premiums with foreign companies unlicensed in Canada, they would have been deprived of their most acceptable form of insurance and would have been obliged to accept whatever terms they could get from Canadian companies regulated by the Underwriters' Association. They will be able, if the view of the committee is made into law, to continue insuring with the lumber mutual companies of the United States which specialize in lumber risks and which have, by so specializing, been able greatly to reduce the cost of insurance.

The Senate committee also took up two other phases of the case. They decided that foreign fire companies unlicensed in Canada should be prohibited from siliciting for insurance, either directly or indirectly in Canada. They also decided in favor of requiring insurers taking policies with fire companies unlicensed in Canada to make a return of the amount of insurance thus taken, but not to make a return of the amount of the premiums paid. With the proposed tax of 15 per cent. removed, Canadian premium payers will not be in a mood to object greatly to the necessity for making the returns thus required.

Preserving the Young Tree Growth—A Wise Economy

A correspondent from St. John, N.B., writes to the "Canada Lumberman and Woodworker" as follows: "I see that you refer to the cutting of Christmas trees and the preservation of the forests. Well, Christmas trees cut no ice alongside the steady cut in this country of the young and middle growth, the so-called lumbermen are cutting for pulpwood for export to the United States. This is a steady drain on one of the most valuable assets that the coming rural population or generation could be possessed of, and the people, or the government of this country may not realize it until it is too late. It is one of the causes of the younger population leaving the country. With the big timber gone and the hope of new growth destroyed by the export of pulpwood, the farmer's son sees a scarcity of fence poles, firewood, etc., and goes either west or to the city.

"Actual facts tell. First let me give you two instances. No. 1. A poor farmer, only 15 years ago, wanting city life, sold his farm and house for $1,400. The man who bought it only cut the largest overgrown timber. In 1909 he sold one-half the cut or stumpage on one-half the total acreage for $4,500, retaining all the ground and buildings and the other one-half untouched. No. 2: A farmer who all his life farmed and was not given to cutting the young growth, recently died, leaving his family comfortable, industrious and with good education. The family decide to accept one of the many offers for the standing timber, and it brings $20,000.

"What better inheritance could there be than the preservation of the young growth of spruce, pine, etc., of this country, especially when the big revenue from it goes to the pulp and paper manufacturers of a foreign country, and what emigrant will be foolish enough to buy a farm with the young growth cut off. There is also to be taken into consideration, the effect this has upon the waterfall, climate, etc. It is up to the governments of the provinces to enact laws to preserve these assets for the millions yet to come. The present generation is better served by cutting only to a certain size, and giving more attention to the soil. In this way the farms will become more productive and the cost of living kept down."

The cutting of young growth is a matter which the governments have not taken sufficient care about in the past. Rigid measures are certainly needed to prevent the destruction of such a valuable asset. The whole problem of conservation is a vast one. If it is taken in hand vigorously by the Conservation Commission there is yet time to save our valuable assets. Our correspondent and hundreds of others have been disappointed in the past by the failure of the governments to do their duty in this regard.

Trade Statistics Indicate Expansion of Lumber Business

The trade statistics published by the Department of Trade and Commerce, continue to indicate an encouraging improvement in lumber trade. The export of forest products show substantial gains for the month of December and for the nine months ending with December.

During December, 1909, the exports amounted in value to $3,636,980, against $2,930,217 during December 1908. For the nine months ending December 31, the exports were valued at $40,577,768, against $33,528,675 in the corresponding period of 1908. The free imports of forest products during December, 1909, were valued at $542,515, and for the nine months ending December, 1909, they were valued at $5,835,690.

The exports of forest products during November showed a slight falling off, being valued at $4,663,855 against $4,682,499. During the 8 months ending with November however, there was a substantial increase, the values being, 1909 $36,940,788; 1908, $30,598,458. The figures for the two previous years also indicate that during the 8 months under consideration in 1909, the export trade entirely recovered from the depression of 1908. The exports in 1907-6 were valued at $35,807,093 and $36,185,054. During 1909 the 8 months exports were greater in value than at any time in the previous decade.

Details of the 8 months export trade afford several interesting facts. The pine deal exports were valued as follows; 1909, $1,575,817, of which

$1,488,815 were to the United Kingdom and $73,799 to the United States; 1908, $1,557,386 of which $1,488,124 was to the United Kingdom and $54,038 to the United States; 1907, $1,546,872 of which $1,478,063 was to the United Kingdom and $66,682 to the United States. Practically speaking the volume of exports of pine deals therefore, has been stationary during the past three years. Spruce deal exports during the same periods were valued as follows: 1909, $5,383,382, of which $4,849,848 was to the United Kingdom and $484,268 to the United States; 1908, $4,236,183, of which $3,879,761 was to the United Kingdom and $201,084 to the United States; 1907, $5,856,706, of which $5,300,326 was to the United Kingdom and $381,900 to the United States. The falling off which is noticeable for 1908 was therefore almost recovered during 1909, and in the case of the United States the exports to that country were considerably increased.

Exports of planks and boards during the eight months were valued as follows: 1909, $17,460,042, of which $13,223,251 was to the United States; 1908, $14,512,545, of which $11,212,010 was to the United States; 1907, $17,257,640, of which $12,964,984 was to the United States. The falling off in 1908 was therefore more than recovered during 1909. The exports of laths, palings and pickets during the eight months were valued as follows: 1909, $1,644,564; 1908, $1,249,302; 1907, $1,483,636.

The exports of shingles show the effects of the increase in the United States tariff. The values were as follows: 1909, $1,896,185; 1908, $1,961,684; 1907, $2,143,038. Pulpwood exports show a steady increase for the eight months. They were valued as follows: 1909, $4,764,108; 1908, $3,530,177; 1907, $3,167,464. The exports of wood pulp also increased, being as follows: 1909, $3,327,134; 1908, $2,844,726; 1907, $2,792,277.

The total exports of unmanufactured wood were valued as follows: 1909, $36,877,203; 1908, $30,534,938; 1907, $35,743,489. The total exports of wood and manufactures of wood for the eight months show that the export trade has recovered and surpassed the position of 1907. The exports were as follows: 1909. $40,758,172; 1908, $33,888,977; 1907, $39,140,494.

The imports of wood and manufactures of wood during the eight months increased nearly two millions over those of the corresponding period of 1908, but were two and one-half millions less than during the corresponding period of 1907. The totals were as follows: 1909, $7,562,732; 1908, $5,757,165; 1907, $10,072,039.

Editorial Short Lengths for Busy Readers

The odd lengths campaign is gaining way. In the United States, the mill owners of the State of Washington have given their adherence to the movement and given it a strong lift. In Canada the Western Canada Lumber Manufacturers' Association have committed themselves to the movement. The Canadian Lumbermen's Association have discussed it seriously, but taken no definite stand. The reason for this is largely that in Eastern Canada odd lengths in many parts of the country are just as standard as even lengths. Certain markets demand odd lengths and when markets make a reasonably firm demand, manufacturers lose no time in accommodating their methods to it. If the markets generally are educated to a taste for odd lengths, all discussion about whether they involve a saving or a waste will be forgotten, and shipments including odd lengths will not be looked at askance or subjected to lower prices. It begins to look as though the ball is now rolling and will gather momentum by its own weight.

It is second nature for some lumber jacks to "jump." When they have come to a suitable stopping place, which is convenient to some camp or other place where they can secure employment, they are sorely tempted to forget their obligation to the company which has paid their fares, and they think too seriously about the possibility of having to pay the fare back, out of their wages, in case they don't find it convenient to stay in the camp all winter. Even in the early days, when lumber jacks were of a more capable class, "jumping" was common enough, but with the multiplication of camps and railroads and the increasing opportunities for securing employment, the "lumber jack" as a class has deteriorated sadly, both in his sense of business honor and in his usefulness as an employee. Lumber operators do not expect to ever rid themselves of this source of worry and loss. They can do a great deal, however, to reduce it The most reasonable method is that of personal inspection of the men who are employed, instead of accepting them in bulk as they are supplied by the employment agencies. A careless, haphazard system of securing woodsmen is not only unbusinesslike and wasteful, it is unfair to the men, good and bad alike. The conscientious, valuable woodsmen suffer in their reputation by reason of the suspicion cast upon them as a class by the less honorable ones, and the latter are improperly placed in the way of temptation, if careful attention is not given to the matter by employers.

A letter from a correspondent, published elsewhere in this issue, takes up the time-honored problem of the waste caused by the destruction of packing cases. "Everybody has to line up and pay his share for the millions of feet of lumber which are turned yearly into the packing case business, and destroyed after being used once." This is the plain truth of the matter ,and it is contrary to the genius of modern business that the waste should be allowed. The remedy suggested is a slightly more durable case, iron bound, which can be returned flat to the wholesaler. Probably the reason why this simple improvement of business methods has not long ago been adopted is the extra trouble to which the wholesaler would be put in caring for and keeping track of the cases. After some progressive wholesaler, however, has adopted this principle and proved it thoroughly, the extra trouble will be forgotten, as the profit grows. This waste is one of those matters which it is impossible to understand. The remedy will come sooner or later, and in view of the increasing anxiety about lumber scarcity, the sooner it comes, the better. If some large wholesale consumer of packing cases and some large manufacturer would agree to try out the scheme, the result would probably be a quick revolution in the packing case business. The loss of trade to the manufacturer may appear as though it would be serious, but there would be important offsets in the form of more economical use of lumber, a more satisfactory class of trade, a higher grade of product, bringing better and more uniform prices, and the possibility of charging more for labor, to say nothing of the saving in storage space. It is a continual source of surprise to many people, that so much waste is still permitted in the manufacture of lumber. The waste was reasonable once, but to-day it is entirely without excuse.

It is hard to realize that a body of business men like the "All Canada Fire Insurance Federation" should feel justified in putting forth some of the reasons they presented to the Senate of Canada in favor of placing a tax upon insurance policies taken with companies not licensed in Canada. The most unreasonable claim they made is that the proposed tax of 15 per cent. was not high enough. They cannot have given the matter fair consideration. This tax would have been a calamity to Canadian lumber manufacturers. A company paying $15,000 in premiums would be taxed to the extent of $2,250. If this tax were taken out of the insurance companies' coffers instead of the policy holders', they would quickly understand that it was quite high enough. With a show of being more reasonable they come forward with a new proposal, to permit intending insurers to take policies with foreign unlicensed companies if they had previously applied in vain to four-fifths of the licensed companies in their province. What a useful sourse of complication this would be. The burden of making application to four-fifths of the companies would be greater probably even than the burden of the 15 per cent. tax, as it would involve delays and uncertainties innumerable and would be a serious handicap to the insurer. The principal object of the insurance bill should be to encourage insurance business, and make it more easy to secure. The insurance companies put the matter in a false light by making it appear as though the object were principally to protect them against competition, and by so doing made it clear to the Senate that their claims were opposed to the public welfare. The decision of the Senate committee to eliminate the provision for a tax on foreign business was the reasonable result of the evidence presented to them.

Double Cut Band v. Single or Circular

Development of the Modern Two-Edged Band Saw—Difficulties which had to be Overcome—Interesting Opinions from many Manufacturers

The increasing adoption of the double cutting band mill in the manufacture of lumber is one of the most important developments which have taken place in the lumber business of recent years. The idea of having cutting teeth on both edges of the band saw is an old one and was tried by different parties from time to time throughout the sawmill world, but with little, and in most cases without any degree of success. The idea was therefore abandoned, especially as the experimenters were either without financial backing, or because necessity, the mother of invention, was not present to push them towards success.

About twelve years ago the idea was taken up seriously by large manufacturers, and from that time to the present, much thought and money have been devoted to the task of working out a practical double cutting mill. Careful observation of the saw when cutting, led to a conviction that the saw could stand a greater feed when cutting near the edge of the upper wheel, as the saw, in this part, is most difficult to move, for the same reason that a belt is most difficult to move at the point where it is leaving the pulley. This led to the designing of a new band mill in which the top wheel was brought as close to the log being cut as possible. The new type became known as the "telescopic" band mill. Its new feature was that the mill moved up and down on vertical slides mounted in the centre of a large base plate. The machine was lowered by gravity and raised by an hydraulic cylinder located under the mill. The whole was counter-weighted so as to use a comparatively small cylinder to do the work. This machine had the advantage that the entire mechanism carrying the wheel was moved up and down, so as to bring the point where the saw leaves the upper wheel, as close as possible to the top of the different sized logs. The object of this was to get a short rigid saw blade to keep the saw above the cut as short as possible at all times, and to keep the surplus length of the blade below the log. This type of mill was used for some years without any saw guide, as the saw was thought to be rigid enough to withstand the feed.

Many mills of this class were put in operation and numerous complaints of snaky lumber were made. To overcome this, a top saw guide was attached, to prevent the saw from being thrown by centrifugal force beyond a line at which it would leave the top wheel. The applying of the top saw guide made it clear that the saw nearest the top wheel is just as liable to make poor lumber as any part between the upper and lower wheels.

As the logs came in great variety to the carriage the mill had to be moved, sometimes twice to four times in a minute. Every mill man working around the band mill knows that sawdust is thrown against the machinery part with great force. This sawdust seems to be peculiarly adapted to cling to any surface that is exposed. As the mill had to move up and down three columns, these columns were more or less covered with sawdust, which made the moving of the mill difficult. To overcome this a little the guides were eased up. This introduced another defect in the mill, as it ceased to be rigid, and so produced uneven, snaky lumber.

The manufacturers, after studying this feature of the question, came to the conclusion that the proper way of cutting lumber would be with a double cutting saw running over a stationary frame. This principle was adopted and developed and numerous improvements were introduced, until to-day double cutting band mills are being produced which are credited by the large majority of users, with producing good lumber much faster than the single cutting band mill, and at a smaller cost. The extra expense of a more efficient filer and an additional man, is apparently more than offset by the increased profits.

An advocate of the double cutting band claims that the advantages secured are many, among them being the following: No offset is required on the carriage; the carriage travels at a more uniform rate of speed in both directions, which relieves it of the usual rack and strain caused by the high rate of speed at which the carriage is engaged; this uniform rate of speed is beneficial to the carriage, to the man riding on the carriage and to the sawyer; the double cutting band saw is safer because it cuts its own clearance with either edge when the carriage is in motion; the double cutting band saw gives the filer an even tension on both ends. The most important advantage claimed by the advocates of the double cutting band, however, is that it cuts from 15 to 35 per cent. more lumber, the range depending on the kind of timber sawed.

In order to secure some practical opinions regarding the service given by double cutting band mills, the "Canada Lumberman and Woodworker" recently addressed letters to a number of lumber manufacturers who have installed them, asking for their views and experience. The result was the receipt of a number of interesting letters, bearing out in practically every regard the claims made by those who have advocated double cutting bands from the first. A number of the replies received are published herewith:

The Mundy Lumber Company, Three Valley, B.C.:—Our experience has been very satisfactory. We find that the double cutting band saw increases the output of our mill at least twenty per cent. The timber we saw is about 75 per cent. cedar, and logs that will average about five to the thousand. There is no question about the success of the double cutting band saw, providing you have a thoroughly competent filer. They are very much harder to keep up than the single cut, as you will understand that both edges must be alike, the tension and the strain, and we have found few men as yet who are really capable of keeping the saws in order. We have been obliged to pay as high as ten dollars per day for such a man. They are to be found, however, and if care is taken to select the right man, there is a nice clean profit in using a double cut over a single cut.

The Revelstoke Sawmill Company, Limited, Big Eddy, B.C.:—We use a double cutting band mill and much prefer it to the single cutting. It cuts more lumber in the same length of time and the workmanship is equally as good. We believe a double cutting band requires a better filer than the single cutter, but there are no unusual differences in keeping it in good condition. Most of our logs are cedar, but there is a percentage of fir, pine and hemlock. So far as results are concerned, they are satisfactory regardless of the kind of wood being cut.

Mr. F. W. Walsh, Ottawa, Ont.:—Your letter of the 7th inst. to the Long Lake Lumber Company has been handed to me for a reply, as I installed their double cutting band mill and ran it for the season, and had excellent results. I have had a varied experience with single and double cutting band mills in both pine and spruce timber, and find that the double cut mills give good satisfaction if properly installed, and if a competent man is employed for filing up the saws. It requires a more experienced, and therefore a higher salaried man, to fit up double cutting saws, but the difference in amount of lumber cut will amply repay, as, with the same number of men, the mill will turn out about one-third more lumber per day. Also, there is practically no danger of ever pulling off a double cutting saw, as it will cut its way out, whereas on a single cut band mill, if the setter happens to set up coming back, or the offset on the carriage does not work, the general result is that the saw comes off before the carriage is stopped. Also, a double cutting mill is much easier on the sawyer and on the carriage men, as a steady gait is maintained all day, both forward and backward. With a single cutting mill, full speed must be used going back so as to keep the saw working, and this is often the cause of accident.

The Big Bend Lumber Company, Limited, Arrowhead, B.C.:—Replying to your enquiry for our opinion re the relative merits of single and double cutting band mills, we beg to express our belief that each of these appears to have its particular field in which it produces the better results.

For such timber as we have been sawing we believe the double cut will give the better results. It is a fact, however, that we find it necessary to make our boards rather thicker than with a single cut, to allow for the little variations between the head and back cut. Again, when cutting cedar logs which have been in the water for any length of time, we find that the bark is a source of great trouble. We believe that the double cut works better under such conditions, as there is less likelihood of pulling off the saw.

Where the timber is clean and the logs of average size, we think the single cut will give better results. The lumber can be cut thinner, as the cut is truer, and less saw kerf can be carried. This tends to conserve the timber and overcomes any little advantage the double cut may have in the greater number of feet cut.

Booth & Shannon, Biscotasing, Ont.:—We have been using a double cutting band mill since spring of 1902, and we are perfectly satisfied with the work done by it. The first few years that we used it, we found some difficulty in securing filers, who thoroughly understood the care of them, but of late years we have had no trouble in getting good, competent men, who can give satisfactory results. One of the advantages of the double cut is an increased output over a single cut.

The River Ouelle Pulp & Lumber Company, St. Pacome, Que.:—Our experience has been limited to the use of a double cutting mill, and consequently cannot say anything in reference to a single cut.

In the year 1904 we installed a double cutting mill, and thereafter sawed double shift (night and day) for three seasons; and have been sawing day shift only since 1907. We saw practically nothing but spruce, which is very much more difficult to saw than pine, and a good deal smaller in the average size of the log. The size of the logs makes a great difference in the quantity of lumber turned out; sawing logs 9-inch and up in diameter, we turn out about 60M feet in a 11-hour shift; when sawing logs under 9-inch, we cannot do better than 45M feet; this is when sawing lumber from 1-inch to 2-inch in thickness.

Of course, the larger the logs are, and the less turning the operator has to do to the log on the carriage, the more there is to be gained with a double cut over a single cut. Everything else being equal,, and sawing logs 10-inch and up in diameter, we figure there shoudl be a gain of 10 per cent. to 15 per cent. in favor of a double cut over the capacity of a single cut.

We consider it very difficult to compare the cutting capacity of establishments, be they band mills or otherwise; as we do not suppose there are any two mills that have the same local difficulties to contend with. The only way to arrive at a comparison between single and double cutting mills, is to get the experience of an operator who has the two styles in his establishment, and is cutting the same timber with both.

Mr. H. C. Lindsay, mill superintendent for the Crow's Nest Pass Lumber Company:—Your letter regarding double band mill was handed to the writer by the Crow's Nest Pass Lumber Company. The writer has been for the last ten years constantly in charge of sawmills using the double cut band for manufacturing lumber out of all kinds of logs that are grown in the mountains between the Rocky Mountains and the Cascades; this includes the hardest kinds

of Rocky Mountain fir that grow high up and are full of shakes, altogether a different kind of fir than that which grows on the coast.

One winter, at Wardner, B.C., the mill ran all winter, cutting logs that were frozen and then thrown into the water, lying there 24 or 36 hours, then brought into the mill and sawed up. Our misscut in that season's run with a double cut band did not exceed two per cent.

The writer thinks, with the erperience he has had with all kinds of lumber, working under the same conditions, that the double cut band will cut, always, fully 20 per cent. more than the single cut ,and it only takes one more man in a double cut mill than it does in a single cut, but it requires a better mechanic to take care of the saws. The amount that can be turned out with a double cut band depends on the size and kind of logs, and the kind of lumber that is manufactured. I have averaged with a double cut band 80,000 a day of ten hours, 50 per cent. inch stock, the other 50 per cent. would be two-inch, logs six to the thousand, log scale, scaling with the Scribner rule. The mill using double cut costs no more than the single cut, that is if you figure the number of feet each saw will cut before being worn out.

If the writer was going to build a sawmill for himself he would never under any consideration put in single cut bands, but there are some mill firms that have changed the double to single because they claimed they could not make any good lumber with double cut. The writer thinks if the truth were known and the mill companies had changed some of the men in the mills, foreman, and filers, etc., they would have had no occasion to change double cut for single cut.

The Conger Lumber Company, Parry Sound, Ont.:—About ten years ago we installed a single cutting band to replace a circular. We ran this for about three years and then had it converted into a double cutting band. We were so well pleased with this experiment that we took out our gang, replacing it with another double cutting band. We have now two double cutting bands and they are giving us entire satisfaction.

We know of no disadvantages that the double cutting saw has compared with the single. It will make just as good lumber, and a great deal more of it; is just as easily kept in repair and is easier on your carriage and men, as you do not require to drive it back quickly in order to make time.

We are noted for the way we manufacture our lumber, it being remarked by all who examine it, how evenly it is cut, and we say "use a double cutting band every time!" We use 14 gauge saws, 11 inches wide, for cutting hemlock.

The Campbell Lumber Company, Weymouth Bridge, N.S.:—We have used double cutting saws both of Canadian and New York manufacture, and, I think, one French saw, and I am not positive but what we had one from England also, nearly all of which came guaranteed to us, and nearly every one has been satisfactory.

Our principal sawyer (who has worked for us some 15 years) demonstrated to us that this band saw yielded us over 12 per cent. more lumber than the old rotary which it superseded. In other words, we had double the sawdust with the old rotary, and consequently double the waste, so in a cut of twenty or thirty million, we estimate we have saved at least 2,000,000 feet of lumber, nearly all of this has been cut both ways. We have never used anything but a double cutting band saw, but I notice the sawyers in cutting up what we call a "flinty" spruce, and sometimes in sawing hardwood or perhaps a knotty pine log, will only saw one way, or if the saw happens to get a little dull on one edge, will only saw one way; but as a rule, I think at least 90 per cent. of the cut has been done at both edges—a board or plank being cut going up one edge and back another, cutting on the other edge, so that the saw is practically in continual cut with the exception of the time shifting the gauge for the next plank, or changing the log.

The only difficulty we had at first was to get a good filer, who, of course, must be a good man to anneal or weld broken saws. I have seen a log a saw cut to satisfaction made out of seven pieces, so perfect was the work in splicing. Remember, we have sawn all times of the year, frozen timber in the winter, as well as the summer's cut, with the saw cutting back and forth on both edges.

The Lindsay Lumber Mills, Lindsay, Ont.:—We replaced our circular saw in our new mill with a double cutting band, which we think is far superior to either single cut or circular saw.

The Arrow Lakes Lumber Company, Limited, Arrowhead, B.C.:—We are aware that a number of mills on both sides of the line have discarded their double cutting band saws and are using only the single cutting now. As for ourselves, we have no complaint to make of our band sawed lumber, though we hardly think that the best of cutting by a double band is as well and evenly manufactured as gang-sawed lumber, or that made by a single cutting band. The trouble probably most often lies in the difficulty of getting the tension on both edges alike. We have yet to see a double cutting band that does better work than the one we have in our mill here, and yet we must confess that even here, the lumber does not quite equal in evenness that which is cut by a single cutting band, but it does come so close to it that we would not think of throwing out our double cutting saws. It is supposed that a double cutting band will produce one-third more lumber, and I think where it does what is called good work it will come pretty near doing it. Our experience is, that in this country, fir and hemlock cuts out better than cedar—that is to say, more evenly.

The Tomiko Mills, Limited, Tomiko, Ont.:—We are now getting as good and even better results from the double cut saws as the single; we get as even lumber and upwards of 10,000 feet more per day. We have been getting 50,000 feet of white pine from each saw, per 10 hours, in good timber. We experience hardly any extra difficulty in keeping the double cut in order.

Theo. A. Burrows, Crandview, Man.:—As I have never used any single cuts I am scarcely in a position to offer you any comparison, certainly not any arrived at from my own experience, but with regard to double cut band I have to say I have now operated an Allis band, 12-inch, double cut, for four years in spruce and tamarac logs, and have found it to give very good satisfaction.

In my experience the double cut band, if not fed too rapidly, makes first class lumber, and I would not want a better machine, but I think that in a great many mills an effort is made to push too many logs through the saw in a given time than it should be expected to cut, and as a result there is snaky lumber.

From all the experience I have had personally, and any observation I have been able to make in other mills, if installing another saw, I would instal a double cut rather than a single cut band.

Shepard & Morse Lumber Company, Ottawa, Ont.:—Some five years ago we had two single cut bands altered to double cuts. Those mills were originally made by the Waterous Engine Works Company, and the alteration to double cut was also made by them. We found the change to be a profitable and satisfactory one for us, but as these mills have been now some 15 years at work and a great many improvements have been made in mills of late, we are taking out these two old mills and putting in two of the Waterous Engine Works Company's latest improved band mills, double cut. Our experience has been that the double cuts are much more satisfactory and economical than the single cuts, and we would not change back to the single cut on any account. We believe that once the filer understands the double cut, it is easier to keep it in order than the single cut.

The above letters indicate that a general opinion has been created in favor of the double cutting band mill. Readers who are interested in the matter are invited to send their views and experiences to the Editor of the "Canada Lumberman."

B.C. Adopts Perpetual Timber License

Commission Reports in Favor of the Renewable Principle—Government Introduces Measure to Embody the Proposal in Law

An interim report has been presented by the British Columbia Forestry Commission to the Government. After reciting the objects for which the Commission was appointed, the report says:

At the outset, the attention of the commission was called to the fact that at the last session of the Legislature the Government announced that it had come to the determination that the tenure of the special timber licenses would, at the next session of the Legislature, receive the attention of the administration in the way of some provision that would make for the perpetuity of the license until the timber is removed, but on such terms and conditions as the Government then may deem prudent in the best interest of the province and people of British Columbia, and, in consequence, the Honourable the Premier has requested us, if possible, to make an interim report dealing with the question of tenure.

In compliance with this request, we have given careful consideration to this question, and in order to implement the decision of the Government we beg to submit the following:—

A majority of the witnesses who appeared before us strongly advocated that the licenses be made renewable in perpetuity, or at least for so long as there should be merchantable timber on the lands covered by such licenses. A great many of the witnesses also strongly urged that the rentals or annual license fees charged for such renewals should be fixed unalterably at not more than the present rates, though, with a few exceptions, they thought the Government should retain control of the royalties to be charged.

A careful consideration of the facts adduced in the evidence submitted, and of the opinions of some of the best known authorities on timber and forestry matters, have led us to the unanimous conclusion that the proposed extension of tenure of these licenses, under proper safeguards, will not work to the disadvantage of the province.

While, as intimated above, we are not yet prepared to formulate in detail what these safeguards should be, yet, having due regard to the best interest of the province, and giving due consideration to the difficult and fluctuating conditions surrounding the timber industry and the necessity of protecting and encouraging the already large investments involved in the same, so as to aid and assist in every legitimate way the development, conservation and perpetuation of this great provincial asset, we suggest that the existing rates, terms and conditions for the present, and pending our final report, be left undisturbed, and in particular we emphatically urge that the Government do not in any way restrict or limit its right and power to amend or adjust from time to time the rentals or license fees and the royalties to be charged, as well as the conditions, regulations and restrictions under which timber may be cut.

We therefore recommend that the proposed amendment be so framed as to provide that the special timber licenses, other than those provided for in subsection (2) of section 57 of the Land Act, shall be renewable from year to year, so long as there is on the land included in such license merchantable timber in sufficient quantity to make it commercially valuable (proof of which might be required by the chief commissioner), but that such renewal shall be subject to the payment of such rental or license fee, and such tax or royalty, and to such terms, conditions, regulations and restrictions as may be fixed or imposed by any statute or order-in-council in force at the time renewal is made; that power should be provided or reserved for the chief commissioner or Government where,

after inspection, it is found the land is fit for tillage and settlement, and required for that purpose, that he or they may require the licensee to remove the timber from such land within a fixed reasonable time, at the end of which period the land shall be opened for settlement upon such terms as the Government shall see fit.

Also, that if any holder of a license provided for in subsection (2) of said section 57, desires to take advantage of the privilege of renewal provided for in this amendment, he shall, within six months after the passing of such amendment, surrender the license held by him and the privileges now appertaining thereto.

The commissioners concluded by stating that they were making a study of the forestry departments of other countries, with a view to the establishment of one in British Columbia. They recommended also that the vote for forest fire protection should be doubled pending the securing of the fullest data in regard to forestry matters. They also recommended that a carefully thought out policy for dealing with the timber lands of the province at present unalienated should be decided upon before the lands are dealt with.

An Act to amend the Land Act, to provide for perpetual tenure of timber land held under special license, has been introduced by Hon. P. Ellison, Chief Commissioner of Lands, as a direct result of the above report. Section 6 of the amending Act provides that special timber licenses shall be transferrable and renewable from year to year while merchantable timber in sufficient quantity to make it commercially valuable exists on the land covered by the license. It is provided that the holder of any license, who wishes to renew under the provisions of the amendment Act granting perpetuity of tenure, must surrender his old license, within two years from April 1, 1910, and in applying for renewal under the new conditions he must pay a fee of $20 in addition to all other payments which may be due. Renewals are to be subject to such rental or license fees and conditions as are made by order-in-council from time to time.

Victory for Insurance Premium Payers

Fifteen per cent Tax Clause defeated in Committee of the Senate —Encouraging results also in Car Stake and Freight Rate Cases

Ottawa, Feb. 23—The manner in which the Banking and Insurance Committee of the Senate disposed of the contentious clauses, Nos. 70 and 139, of the insurance bill meets the wishes of lumbermen. An examination of the answers of the committee to the various points raised in the discussions brought before it by many delegations, shows that the views of the premium payers appeared to the Upper House legislators to be fairly reasonable. The formidable task of getting the opinion of the committee on the different aspects of the insurance problem was simplified by dividing the issue into five different parts. The policy of the committee was thus ascertained, and then a sub-committee of seven was delegated to put that policy into words.

The questions were answered as follows:

(1) Will Canadian citizens be allowed to insure freely in unlicensed foreign companies? Yes.

(2) Shall all unlicensed companies be prohibited from having representatives in Canada or from soliciting in Canada, directly or indirectly? Yes.

(3) Shall the insured be taxed to a certain extent to help to maintain the insurance department of government? No.

(4) Shall the insured be obliged to send annual returns to the insurance department as to the amount of insurance placed outside? Yes.

(5) Shall the insured be obliged to make returns to the department as to the amount of premiums paid to outside insurance companies? No.

In this manner the whole committee, which has worked hard on the insurance bill, declared upon the main issues.

The duty of drafting amendments to the clauses in question was entrusted to Sir Mackenzie Bowell, Hons. G. W. Ross, Forget, Cox, Thompson, Beique and Wood.

Leading lumbermen when interviewed upon the outcome of the fight against the objectionable clauses declined to say anything until the measure had made its way through Parliament. The terms of the bill may yet be attacked in the Upper or Lower House, but the significance of the verdict of the senators who have weighed the legislation so closely, is considerable.

Ottawa, Feb. 16.—The evidence in the application of the Canadian Manufacturers' Association against the charge for stakes and fastenings required on flat cars for shipping lumber, was concluded before the Railway Commission on Feb. 15th. An early ruling on the case is expected. The Canadian Lumbermen's Association naturally made the fight against these charges of the railways their own, and with the British Columbia Lumber and Shingle Manufacturers', Limited; the Mountain Lumbermen's Association of British Columbia; the Montreal Lumber Association and the Board of Trade of St. John, N.B., were parties to the application. The first appeal to the Commission on this issue was in April of last year. In July, the Board made an order declaring the matter one of rates and not of equipment. The new application which is now being disposed of then became necessary.

The lumbermen pointed out before the Railway Commission that the stakes and fastenings required on lumber cost on an average $3.50 a car The stakes were usually either lost or stolen in transit, and it was rarely that the shipment ever came back to be used a second time. In addition to this loss the lumbermen were improperly compelled to pay freight rates on the weight of these stakes and fastenings. Only in instances such as where J. R. Booth hauls logs from the shanties and unloads them in his own yards and piles up the fastening devices until he has a load to take back, was it practicable for a lumber shipper to guard his stake and fastening equipment closely enough to save them from thieves or careless operatives. A suggestion on behalf of the railways that a representative of the lumber shipper accompany the loads was regarded as impracticable by the lumbermen, because once the load is turned over to the railway it naturally becomes the carrier's duty to see it safely delivered at its destination.

The railway companies made much of the fact that the rule in the United States was for lumber companies to bear the expense of stakes and fasteners, but they were reminded that a vigorous fight was being waged against that rule and special legislation was being sought of Congress as a remedy. Besides, the law in the United States makes allowance for the weight of the stakes in charging up the freight of lumber carried.

The lumbermen pleaded for a fair reimbursement for the value of stakes furnished. Commissioners Scott, Mills and McLean heard the appeal.

Ottawa, Feb. 16—The difficulty of reaching an amicable settlement between the lumbermen and railway companies over the vexed freight rates revision which was referred to James Hardwell, chief traffic officer of the Railway Commission, last year, came much into prominence on Feb. 15th, when a conference was held between shippers and carriers in the Railway Board rooms. When the Commission concluded taking evidence on Sept. 21st, Chairman Mabee asked the traffic officer to frame a schedule, if possible, that would not exact more than $3,000 to $5,000 above the rates which were formerly in effect. On the figures submitted to the Commission by the railways, it was shown that the extra charges were approximately $40,000. A still closer examination of the collections has revealed that the additional collections resulting from the revised tariff amount to $50,000.

In attempting to adjust the rates so that there would be only a few thousands more collected Mr Hardwell, despite his admitted skill in such matters, had an arduous task. It was made all the more difficult by the railways refusing to have any denomination smaller than half cents in their tariffs. It would have often simplified matters to have added another quarter cent on a rate between certain points, but this was not permissable. The exact terms of Mr. Hardwell's report to the joint conference were not made public However, it is understood that he offered possible solutions of the problem which may finally mean the arrival at a satisfactory settlement. The railways are anxious to exclude any condition which would lessen their revenue, and the lumbermen feel that they are bearing a burden which calls loudly for redress.

As the matter now stands, Mr. Hardwell is likely to make a report to the Commission on his efforts in the direction of carrying out their recommendations. The lumbermen's representative and railway officials are negotiating in the most cordial manner and the near future is likely to see some adjustment of the dispute. Those attending the conference were Mr. Hardwell, Frank Hawkins, secretary of the Canadian Lumbermen's Association; W. R. McInnes, freight traffic manager of the C.P.R.; W. B. Bulling, his assistant; C. A. Hayes, general freight agent of the G.T.R.; John Pullen, assistant; W. S. Tilston, of the Montreal Lumbermen's Association, and J E. Walsh, of the Canadian Manufacturers' Association.

In New York State during the past season 11,967 acres of forest lands were burned over by fires and the loss was only $25,101, as against 177,000 acres burned during the previous year and a loss of $644,000.

Pioneer Lumberman Called by Death

John Charlton, Lynedoch, Ontario — Long Identified with Lumber History of the Province

The Late John Charlton, Lynedoch, Ontario.

Mr. John Charlton, of Lynedoch, Ont., a former member of the House of Commons and one of the best known lumbermen of Canada in his day, died on February 11th at his home in Lynedoch. Although Mr. Charlton had suffered from ill-health for the last few years, it had not interfered seriously with his ability to attend to his many duties. He had been actively at work, in fact, on the day previous to his death. The immediate cause of death was a stroke of apoplexy.

Mr. Charlton was the eldest son of Adam Charlton, of Newcastle-on-Tyne, England, and was born at Garbuttsville, N.Y., on Feb. 3rd, 1829. Soon after his birth, the family moved to Ellicottville, Cattaraugus County, N.Y., where Mr. Adam Charlton was for years the financial manager for the Holland Land Company, which handled a large portion of the land of western New York. John Charlton was educated at a grammar school in Caledonia, N.Y., and at the Springville Academy, New York. He was a widely read scholar and for a time studied both medicine and law. In 1849, when he was 20 years of age, his family moved to Canada and took a farm of 300 acres, a mile to the south of Ayr, in the township of Dumfries.

After working for four or five years on the farm, John Charlton opened a general store at Lynedoch. Five or six years after this he went into the lumber business. The district in those days had a magnificent growth of white pine, and Mr. Charlton took part in the removal of the timber to market and the opening up of what is now one of the finest farming sections on the continent. He became at that time Canadian manager for a large United States lumber company, Messrs. Smith & Westover, of Tonawanda, N.Y. Workingeither for himself or for his employers, he took part in every phase of lumbering, from making and rafting the logs and sawing the lumber, to dealing in the market. After acting for the United States firm for two years he went into business with James Ramsdell, under the name of Ramsdell & Charlton. About two years later Mr. Charlton bought out Mr. Ramsdell's interest and carried on the business on his own account.

In 1868 John Charlton and his brother Thomas went into partnership under the name of J. & T. Charlton, and they carried on the business until the day of his death.

About 1868 John Charlton also formed a partnership with Alonzo Chesborough, of Toledo, O.; under the name of Chesborough & Charlton. They secured large tracts of pine land in Michigan. The operations in Norfolk county, carried on by Smith & Westover, Ramsdell & Charlton, John Charlton, and J. & T. Charlton in succession, were largely in the finest class of white pine timber, a large proportion of which was taken to the markets in long timber, running from 60 to 100 feet in length and from 24 to 36 inches in diameter in the centre. This was taken mostly to New York, and was sold for shipbuilding, most of it being used for ship masts before steel masts were introduced.

After closing their operations in Norfolk county, the firm of J. & T. Charlton operated in Michigan until 1885, when they began operations on the north shore of Georgian Bay. They also conducted a factory at Tonawanda, N.Y., for the manufacture of doors, sash and all kinds of wood productions, known as house trim. This product was also mainly sold in New York.

In 1900 J. & T. Charlton erected a sawmill in Collingwood, Ont., for the manufacture of their logs from Algoma into lumber and lath. This mill is still in operation.

In 1884 John Charlton, in company with his brother W. A. Charlton, purchased timber limits on the headwaters of the Blind and Serpent rivers, on the north shore of Georgian Bay, and in 1899 a partnership was formed between John Charlton, Thomas Pitts and W. A. Charlton under the name of Pitts & Charlton, with head offices at Toronto and with Mr. W. A. Charlton as general manager and in full control. This firm operated on the Whitefish river on hte north of Lake Huron, and manufactured logs into lumber and lath at Cutler, Spanish River and Victoria Harbor, principally at Victoria Harbor. In 1905 Mr. W. A. Charlton purchased the interests of Mr. Pitts, and from that time the firm was known as J. & W. A. Charlton. The two firms, J. & T. Charlton and J. & W. A. Charlton were in existence at the time of Mr. John Charlton's death.

It was in public life that Mr John Charlton was best known. As a member of the Dominion Parliament he introduced many important measures which were enacted into law. Chief among these was a measure which came to be known as the Charlton Act, the object of which was to afford greater protection to working girls. Mr. Charlton was an active worker in the cause of Sabbath observance, and was one of the founders of the Lord's Day Alliance. Although a Liberal in politics ,he frequently exercised his independence of party, when he believed that the public interest demanded it. Mr. Charlton was also a man of wide literary attainments and used his pen vigorously, contributing frequent articles to magazines of the serious type, and being the author of a widely read book entitled "Parliamentary Recollections." His greatest work was as a member of the Joint High Commission of 1898 and 1899. between Great Britain, Canada and the United States, as a member of which he did much to promote better trade relations between Canada and the United States. Mr. Charlton was also a vigorous advocate of reciprocal trade between Canada and the United States. He was one of those men for the production of which the lumber industry has become noted; men who not only make a success of their business calling but take a broad interest in national affairs. His presence and influence will be greatly missed.

The Forestry Convention at Fredericton

The eleventh annual convention of the Canadian Forestry Association was held in the Legislative Chamber, Fredericton, N.B., on Wednesday and Thursday, Feb. 23rd and 24th.

The proceedings were opened by an address from His Honor Lieut.-Governor Tweedie, and addresses of welcome from Premier Hazen, Hon. C. W. Robinson, leader of the Opposition; Hon. W. C. H. Grimmer, Surveyor-General, and Mayor C. F. Chestnut, to which a suitable reply was made by the chairman.

The annual review of the president, Mr. Thomas Southworth, of Toronto, was read by the chairman in the president's unavoidable absence. He referred to the work of the association, and said that legislators were aware of the change in public opinion and legislation would likely shortly be enacted with the object of more successfully conserving forest wealth. This was particularly true of Ontario, Quebec, the Federal timber lands and British Columbia. British Columbia had withdrawn all remaining timber lands from sale pending the report of a special commission. Quebec had taken an advanced position, and in Ontario the Minister of Lands and Forests had at the last convention of the Canadian Forestry Association at Toronto, given a clear intimation that a change in the relationship of the Government and the limit holders was imminent. This relationship, created under vastly different conditions than obtained today, was no doubt unsatisfactory to the province, and possibly to the lumbermen; but it was to be hoped that in the changes likely to take place increased revenue to the province would not be considered the main issue, but rather the adoption of cutting regulations that would look to a perpetuation of the forest and the lumber business.

No matter was more important than fire protection. Some advance had been made in the protection of the forests held by the Crown, and by the lumbermen, through the fire ranger system, but in the large areas in process of settlement there was no attempt to control the situation, and the fire laws now in force (referring particularly to Ontario) were practically useless. The provisions in that Act regarding railway locomotives were impracticable, and consequently a dead letter. Settlers set out fires for clearing purposes as they pleased, frequently with disastrous results. He suggested the appointment of a special committee to consider this question and to embody its ideas in concrete form.

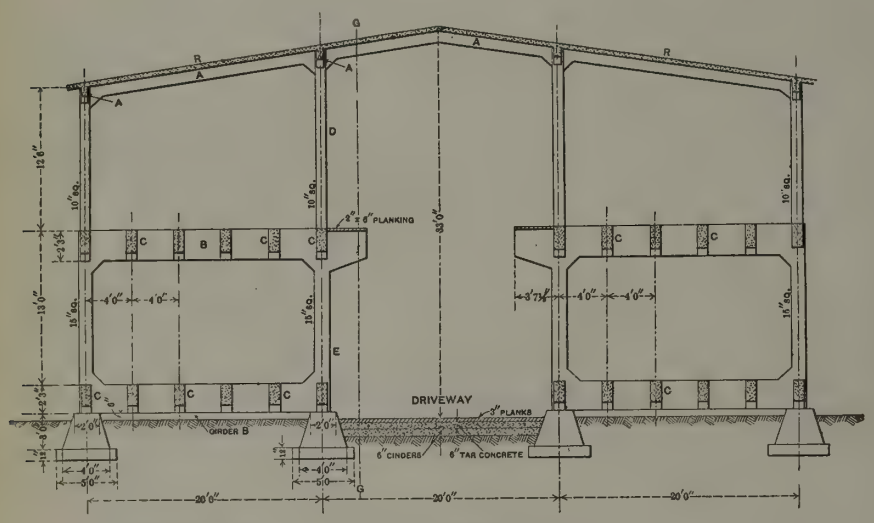
On Wednesday afternoon the programme contained an address by Hon. Clifford Sifton, chairman of the Commission of Conservation. Addresses were also delivered by Dr. C. C. Jones, Chancellor of the University of New Brunswick, upon the educational aspects of forestry; Prof. R. B. Miller, head of the Forestry Department of the University of New Brunswick; Mr. F. C. Whitman, president of the Western Nova Scotia Lumbermen's Association; Hon. Chas. E. Oak, of Bangor, Maine, on the pulpwood question in New Brunswick; W. B. Snowball, of Chatham, N. B., and Senator Edwards, of Ottawa.

Wednesday evening was devoted to a reception tendered by His Honor the Lieutenant-Governor in the Parliament Buildings.

On Thursday a number of interesting addresses were given. Hon. J. P. Burchill, of Nelson, N.B., spoke upon lumbering in northern New Brunswick. W. C. J. Hall, superintendent of the Bureau of Forestry, Quebec, gave an address upon forest protection. Mr. H. W. Woods, M.P.P., of Welsford, N.B., spoke of the best methods of dealing with forest fires. Mr. W. R. Brown, secretary of the Forestry Commission of New Hampshire, gave an address upon "Fire Laws and Fire Protection in New Hampshire." Prof. E. J. Zavitz, of the Forestry Faculty of the Ontario Agricultural Colloge, spoke upon "Reforestation in Ontario."

The convention was closed on Thursday evening with an illustrated address by Mr. Abraham Knechtel on forestry in Canada and other countries.

The Retail Dealer and His Problems



A Concrete Storage Shed—Relations with Wholesalers

A Reinforced Concrete Lumber Shed

The fire-resisting qualities of reinforced concrete are so thoroughly recognized at the present day that it is not surprising to find it used for every conceivable kind of building, and nowhere perhaps is it more desirable than in the construction of a building designed to house or store lumber. Not only would it be fireproof, but also wind and storm proof, and more stable in every way than would be the case if the ordinary frame construction was employed. Another advantage of the reinforced concrete is its great durability, being proof against the ravages of time and the attacks of insects and decay.

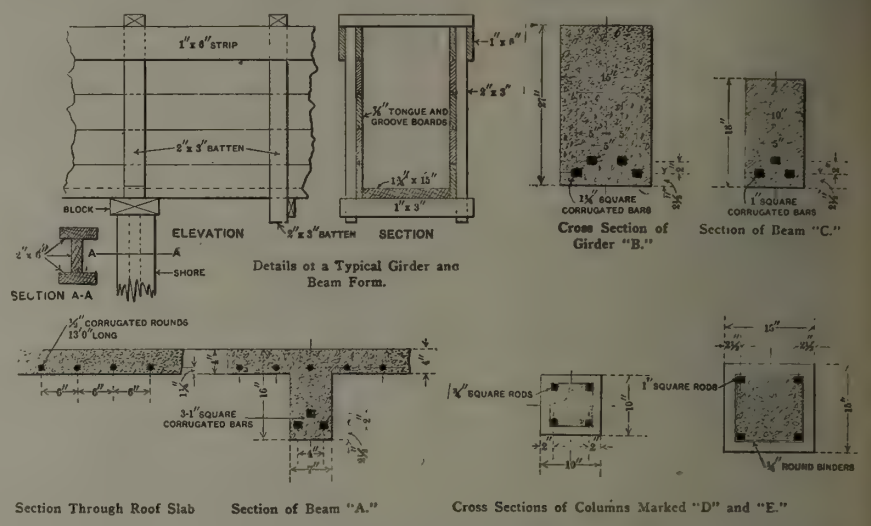
The lumber shed illustrated herewith has a row of pockets on either side of a covered driveway, the latter being an excellent feature in connection with a building of this character, as lumber can be loaded on the waggons or stored in the pockets in all sorts of weather conditions without inconvenience. The driveway is made up of 6 inches of cinders on which are 6 inches of bar concrete, this in turn supporting a flooring of 3-inch planks. In the row of second-storey pockets, brackets are built out upon which 2x6-inch planking is laid, thus forming a platform along the front of the pockets. The beams marked "C" on the sections are spaced 4 feet on centres, so as to facilitate the storing of the different regulation lengths of lumber.

The members in this shed have been calculated to take a load equal to the weight of yellow pine stored to the full capacity of the pockets

Cross Section of Lumber Shed on Line F-F of the Longitudinal Section.

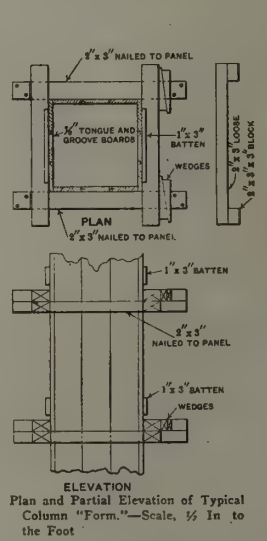
Yellow pine weighs about 7/5 as much as white pine, so that the specifications will be amply suitable for the latter.

The driveway has been made 20 feet wide, so that 20-foot lengths of lumber can be taken from the pockets on one side without interfering with those on the oposite side of the driveway.

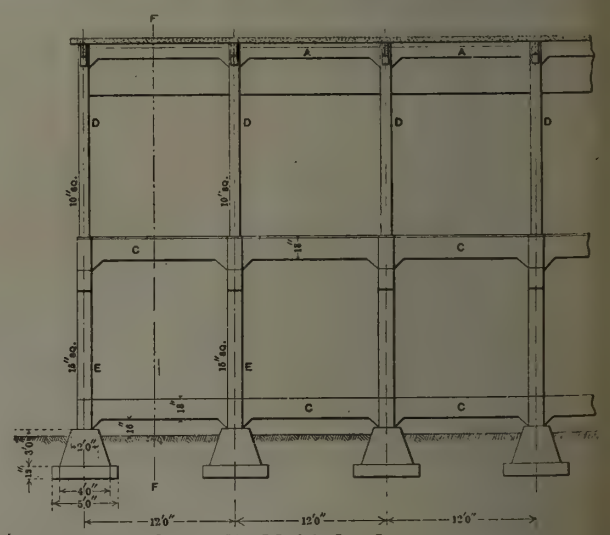


The sizes of the various members of which the shed is constructed are marked on the cross sections. The roof is composed of a 4-inch slab, reinforced with ½-inch corrugated round bars 13 feet in length and spaced 6 inches on centres. A cross section of the roof slab, also of the beam supporting it, is shown in the details presented herewith.

The shed can be built to any length desired, as the pockets are all of the same design.



The Retailer and the Wholesaler



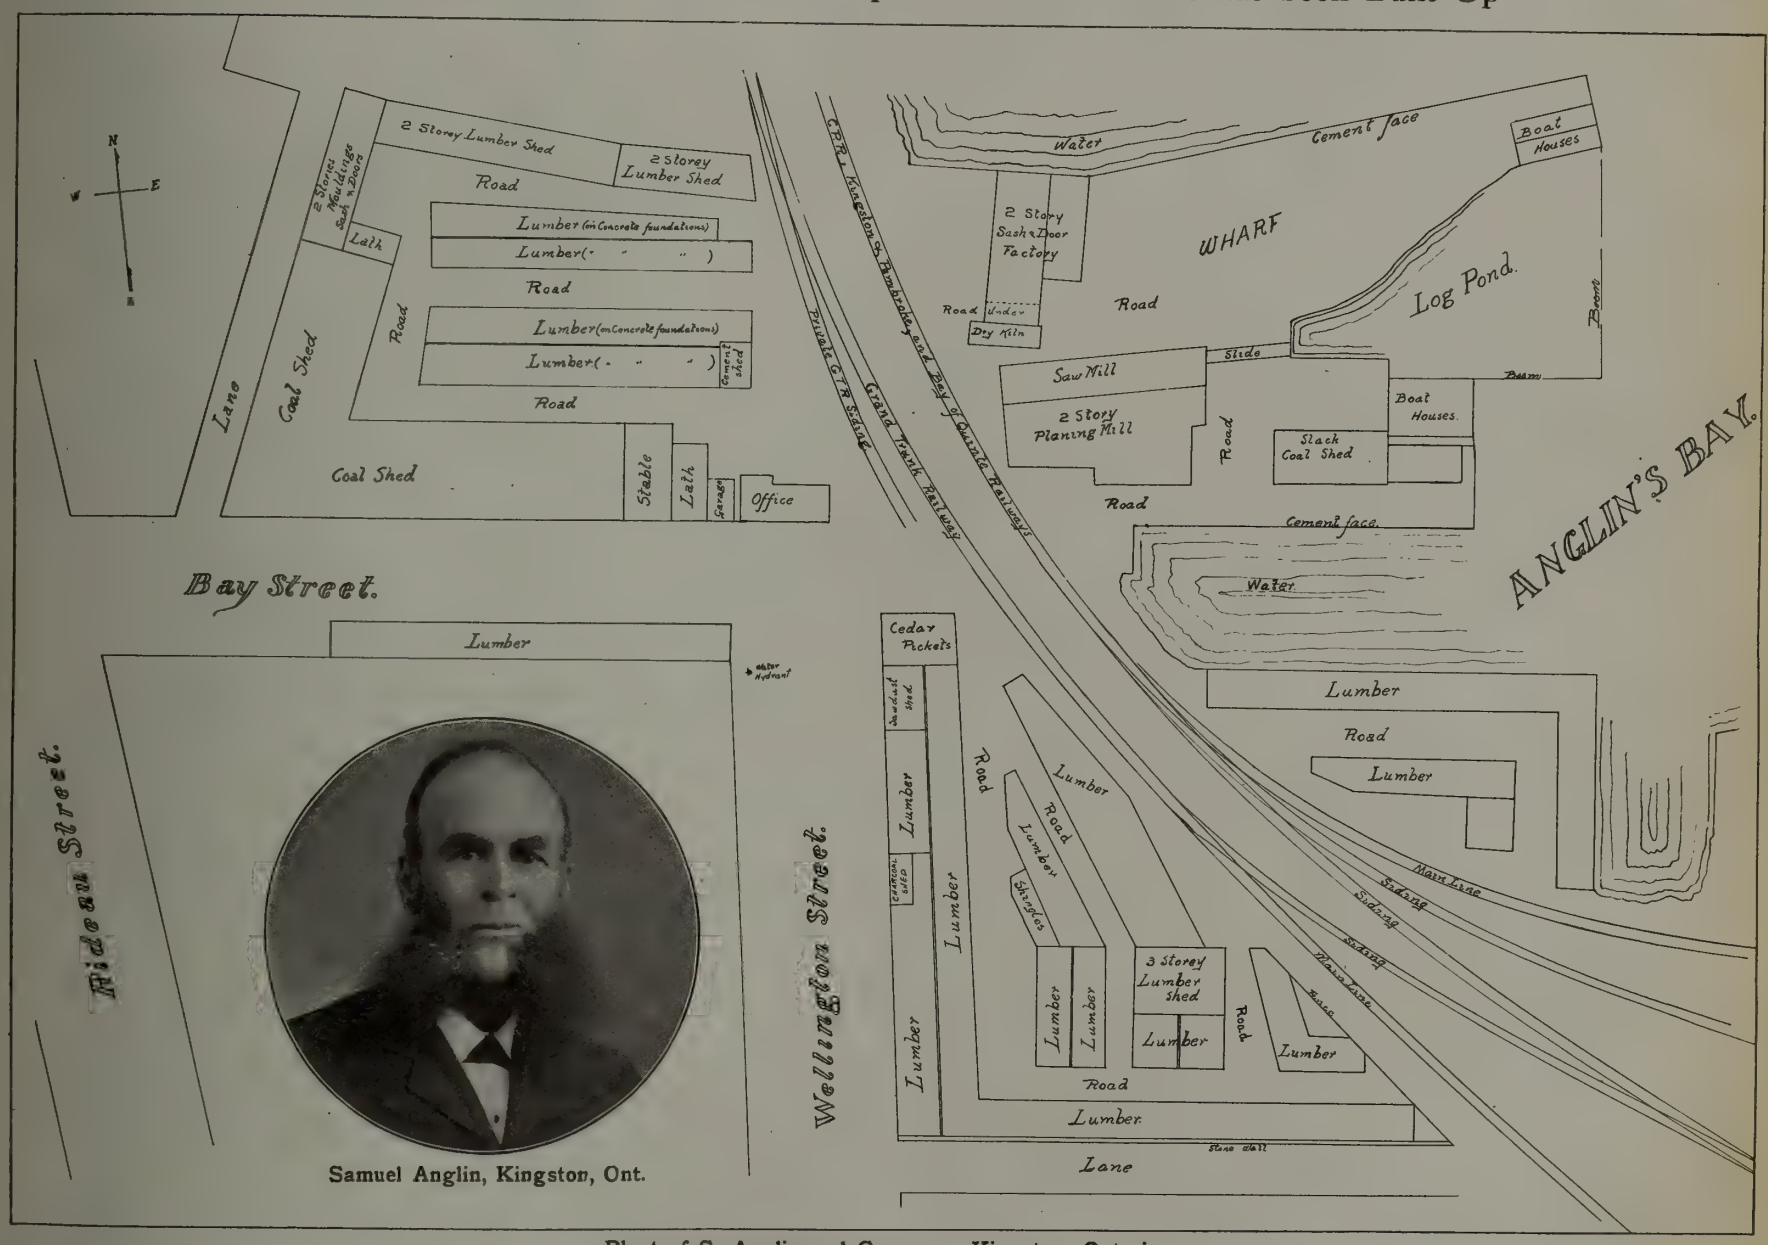
The relations between retail lumber dealers and wholesalers provide the most important question which comes up in the line of trade ethics for either branch of the trade Every convention of lumbermen nowadays has a lengthy discussion upon trade ethics problems, and it is proper that this should be the case. It is frequently the case also that the discussions at conventions take on a general and theoretical nature and do not come down to practical every day questions. Once in a while a wholesaler will be called upon to address a meeting of retailers, and on such occasions if the wholesaler is alive to his oportunity some good and wholesome truths are brought out. For instance, a wholesaler at a recent meeting brought up the matter of discounts, which in itself has often been theorized upon with little practical results. This particular speaker, however, pointed out a few matters which, though apparently trivial, may be the cause either of success or failure to one or other parties to a deal. Broadly speaking, his ideas were somewhat as follows:

The discount for cash is a trade advantage which all of us like to secure whenever possible and which few of us seem to place sufficient importance upon when the question is one of surrendering the discount to a party who is entitled to it. The terms of sale are actually as important a part of a contract as the price agreed upon. If this were not so, credit trade would be a farce, and, in fact, in many cases it is much worse than a farce. How often it happens that when a retailer has not the money at hand he allows a deal to run some ten or thirty days beyond the discount period and then makes a remittance of the actual cash price in the almost certain hope that to the wholesaler at the other end the

ready money will appear well worth accepting without saying anything about the discount. The wholesaler in such cases frequently accepts the remittance rather than raise the question of discount. The position which a wholesaler is placed in by such a course is an embarrassing one and one which an honorable dealer, taking proper consideration of the wholesaler's business, should hesitate to place him in. This hesitation, however, is none too often found. The practice on the other hand is rather on the increase in some sections. Aside from its particular effect upon the trade of the retailer himself, this practice has a very general effect upon the trade at large. The wholesaler, like every other business man, is a borrower, and if he does not secure his money in payment for goods provided, either within the cash period or with a proper interest added after the discount period has passed, he loses money. There is no other way of looking at it. If he continues his leniency, he must come to grief, or else in order to secure himself against loss he muse advance his prices. There are only two horns to the dilemma, and the wholesaler is amply justified in taking the one which points to self pro-

Partial Longitudinal Section on Line G-G of the Cross Section.

tection. To the retailer therefore, the result in the long run is that he gains nothing and possibly loses by advanced prices and by the loss of the wholesaler's confidence.



A retailer who asks a favor of this sort only once in a long time is in a different situation. If he has been generally prompt with his payments, any reputable wholesaler will be quick to accommodate him, but the man who makes the trouble is the one who makes a business practice of securing as much as possible, both of the time allowance and of the discount. If a retail firm is unable, through some fault of its own, to make payment within the stipulated time, it is not fair for them to ask the wholesaler to pay the interest upon the money. The retailer should at least under such circumstances buy a draft from the bank or adopt

some similar means of either paying the wholesaler or accepting the increased rate. If the retailer would only stand in the wholesaler's shoes for a few days he would realize that in this matter he has an excellent opportunity for the application of the golden rule.

Another matter of equal importance is that relating to the cancellation of orders after work has been commenced upon them. Every year, wholesalers have many of these cases to deal with. Having once given an order to a wholesaler the retailer should look upon the contract as a sealed bargain and should stick to his part of it faithfully. Instead of this, retailers are often known to look about for still better prices than the ones they have obtained, and, if successful in their search, to go back to the wholesaler with a request for a lower price. Again the wholesaler is put in a very hard position. The proper guide for the retailer in such transactions is that he should act no differently when obtaining an offer of a lower price after a contract has been made than he would if the new price were a higher one. A reliable wholesale firm will protect the retailer against any general decline in the market, and the retailer should reciprocate by protecting the wholesaler against any similar decline, i.e., against a competitive price secured after the contract is made.

A Progressive Firm of Kingston Retailers

S. Anglin and Company's Modern Plant for Handling Lumber—Over Half a Century of Success—How a Wide-spread Retail Business has been Built Up

Samuel Anglin, Kingston, Ont.

Plant of S. Anglin and Company, Kingston, Ontario.

One of the pioneer firms in the retail lumber business in eastern Ontario is that of S. Anglin & Company, Kingston, who have built up a widespread and successful business in that city. It is indicative of the business ability and wide experience of the company that they have not confined themselves solely to the retail lumber business. There are other lines of business which of necessity grow out of the lumber supply business and which a wideawake retailer makes into profit producers. S. Anglin & Company not only handle lumber of many kinds, fence posts and firewood, but they are large dealers in hard and soft coal, Portland cement, sash, doors, stair work, verandah work, etc. With all these varieties of building materials they are able to present a strong argument to contractors who are always quick to realize the advantage of buying as much as possible from one firm.

Mr. Samuel Anglin, the head of the firm, gained his first experience in lumber at Battersea, Frontenac county, where he operated a water mill for a few years. About the year 1866 he moved to Kingston and entered into partnership with his brother, Mr. Wm. B. Anglin, under the name of W. B. & S. Anglin. At that time, the chief feature of the

F. R. Anglin, Kingston, Ont.

Chas. S. Anglin, Kingston, Ont.

business was a circular sawmill which was supplied with logs obtained on the Rideau and St. Lawrence rivers and nearby waters. Mr. W. B. Anglin managed affairs at Kingston, while Mr. S. Anglin commanded a steamboat, towing logs, carrying wood and other freight. When a few years later the Grand Trunk and Kingston & Pembroke Railways entered the city and the city business had improved, Mr. S. Anglin gave up command of the boat traffic and devoted his whole time to the sawmill, wood and lumber interests at Kingston. Adjacent property was gradually acquired, buildings were erected ,planing machines installed and other improvements made; and now the firm have one of the finest retail yards and woodworking factories to be found in eastern Ontario. The growth has been slow but steady. Mr. W. B. Anglin died in 1886. A few years later the title was changed to S. Anglin & Company, and subsequently Mr. S. Anglin's sons were received into partnership. The second son, Mr. Wm. H., died early in 1909, leaving the business in care of Mr. Samuel, Mr Francis R. and Mr. Charles S.

The plant, which covers three acres near the heart of the city, is situated on an excellent bay on the Rideau river, where it includes splendid concrete docks for loading and unloading cargoes of coal, cement, brick and lumber. It also has two railway sidings, connecting with the Grand Trunk and Kingston & Pembroke Railways. The lumber yards, which are well laid out and drained, are intersected with good hard roads or alleys, which allow free access to all the piles and concrete foundations on which the lumber is kept dry and ready for use. There are several two-storey lumber sheds for dressed and matched lumber, moulding, etc., which contain hemlock, spruce, white pine, red pine, southern yellow pine, plain and quartered oak, cypress. cedar, whitewood, birch, maple, ash, basswood, cherry, walnut, etc. The coal sheds have a capacity of 3,000 tons and are well built and floored with solid concrete. The sash and door factory was added about ten years ago, and this branch has proved so successful that it now employs 15 men, and contains more than 20 machines. Many kinds of wood goods are made here—boxes, newels, balusters, grilles, porch columns, ladders, stairs, counters, veneered doors,interior finish for office, stores, churches, schools, etc. This department has sent its manufactures to various points in Ontario and the Northwest. The saw and planing mill has been recently enlarged and improved, and a new Waterous saw carriage added. The firm prides itself on having one of the most commodious office buildings in the city.

Forty to fifty men are employed the year round in the different branches, and handle a great variety of lumber and timber brought in from the Pacific coast, the Maritime Provinces, the southern States and various other points.

Mr. Samuel Anglin, the senior partner, is well known in Kingston, where he was born in 1842. He started mercantile life without a dollar and is a fine example of what energy, honesty and economy can accomplish. He represented Cataraqui ward for 14 years on the Public School Board, of which he was chairman in 1886. He also sat for one year in the City Council.

Mr. F. R. Anglin obtained the degree of B.A. at Queen's College in 1895, and since that time has given especial attention to the office work of the firm. He is now a member of the Board of Education and Board of Trade.

Mr. Charles S. Anglin, after completing his school course, spent two years studying mechanical drawing and architecture, which are of considerable advantage to him in his duties as manager of the mill and factory. He is an enthusiastic autoist, a member of the Automobile Club and of the Oddfellows' Association.

Western Retailers Object to Odd Lengths

At the recent convention of the Western Retail Lumbermen's Association at Winnipeg, the following resolution was unanimously adopted: "That in the opinion of this meeting, after hearing the arguments on both sides, it is not to the best interests of the lumber trade and of its customers, the consumers, that the short and odd lengths be shipped as proposed by the manufacturers."

At the invitation of the president, Mr. A. K. Godfrey of the retailers, who was in the chair, several representatives from British Columbia addressed the meeting. Mr. A. D. McRae, of Vancouver (Fraser River Mills), Perry D. Roe, of Port Moody (Canadian Pacific Mills), T. F. Paterson, of Vancouver (Terminal Lumber Company), and W. A. Anstie, of Revelstoke, secretary of the Mountain Lumbermen's Association, were the speakers.

Mr. C. H. Wentz, of Saskatoon, was the first to take up the argument for the retailers. He said the western retailers entirely failed to see where any saving came in. They rather believed that the loss would actually be greater and it would have to be borne eventually by the consumer. The consumers were accustomed to the even lengths and it would be most difficult to get them to change. He claimed that the actual waste on the standard 16-inch and 2-foot centres would be much greater with odd lengths and he was certain the consumer simply would not stand it.

Mr. E. C. Ingram, of Sauk Centre, Minn., president of the Western American Lumber Association, also failed to see any benefit in the odd lengths. Even admitting that they could be forced on the trade, he could not see any saving or extra profit to the salesmen. He claimed that the profit to the mills would be so small that he was inclined to think that the whole proposition must be a joke on the part of the millmen. Either that or there was a "nigger in the wood pile." He advised the retailers to answer to the millmen that they could not handle the odd lengths. Even if it could be shown that there would be a saving, it would be more than outweighed by the inconvenience and the labor and energy required to sell the odds to people that did not want them.

J. A. Dure, on behalf of Winnipeg retailers, took a similar stand, as also did Mr. W. Alsip. Many others took part in the discussion and eventually the resolution given above was passed.

The officers of the association were elected as follows: President, A. K. Godfrey, Winnipeg; Vice-President, C. H. Wentz, Saskatoon.

Victor Beckman, of Seattle, Wash., secretary of the Pacific Coast Lumber Manufacturers' Association, has been carrying the odd lengths gospel to retailers recently and has been received in many cases like a missionary on a cannibal island. However, he was fortunate enough to visit Canada. His treatment here was more kindly and induced him to refer to it as follows in a recent address to the Yellow Pine Manufacturers' Association: "We are not easily discouraged. We started an educational campaign, and I have travelled from California to British Columbia. We have signed up a total of 24,000,000 feet of a total daily capacity of 26,000,000 feet on the Pacific coast, and I even went over to a meeting at Vancouver, B.C., on Dec. 11, and signed up every association west of Ontario, and they were talking about making it a law out there. They are pretty good people up there in Canada, I will tell you."

At a meeting of wholesalers and retailers recently held in Portland, Ore., a compromise agreement was reached in connection with the odd lengths matter, which is intended to apply to the country west of the Rocky Mountains. It was agreed that a certain amount of education would be necessary in connection with the introduction of odd lengths. It was decided that for six months the wholesalers should supply the trade with such odd lengths up to 15 per cent. in each car as they might elect, charging for it the price of the next lowest even length. In return for this assistance, the retail trade is to go on recard as accepting, so far as reasonable, after such a period, the odd lengths at prices carried in the February 1 price lists. After the six months, both branches of the trade will be in a better position to discuss the question.

Miscellaneous News of Interest to Lumbermen

The failure of the McGili Chair Company, of Cornwall, Ont., is reported. A number of Montreal firms are interested.

"A Brief History of Forestry" in Europe, the Uniteed States, Canada and other countries, by B. E. Fernow, LL.D., has been published by the Forestry Quarterly, Cambridge, Mass., and the University Press, University of Toronto.

Vancouver and Victoria reports state that trade all along the coast holds an active tone, and the prospects continue good for an excellent spring business. Considerable activity is reported from lumber camps and the trade is looking forward to a heavy demand for the finished product.

At the twelfth annual convention of the Associated Boards of Trade of Eastern British Columbia in Nelson recently, a resolution was passed calling for the Dominion Government to impose a duty of $2 a thousand on rough lumber as a protection against dumping by United States manufacturers

Mr. J. W. Molson's new mill at Shawbridge, Que., is rapidly nearing completion. It is expected that the machinery will be installed and in operation by the spring. Their season's cut will include hemlock, spruce, pine, cedar and hardwoods.

The receipts of stock by vessel at the Haines Lumber Company's yard, North Tonawanda, N.Y., next season will not be confined entirely to lumber from lake ports, as the company contemplates bringing some from its plant in New Brunswick by boat during the latter part of the summer. Considerable stock is being brought from the Bathurst, N.B., mills by rail.

"Even when we effect all possible economies in utilization, the great problem of the hardwood industry will remain unsolved. Unless means are put into effect to renew the forest as it is cut away, the hardwood industry is founded upon sand. I do not refer especially to the planting of trees; you might plant trees with your entire force of men during the whole planting season, but that would not solve the problem. Nature is the great tree planter. She plants millions to our one. What we need to do is to remove the obstacles to the natural reproduction of the hardwood forests—one of the greatest of these is fire. We must abate the fires by State laws where necessary, and by combined action among ourselves."—W. L. Hall before the Hardwood Manufacturers' Association.

Query and Comment

Will you kindly let me know what bird's-eye maple is mostly used for? I have about 50 trees, and would like to know what it is best to cut them into.

Bird's-eye maple is used almost exclusively in the manufacture of furniture. Occasionally it is used for the manufacture of inside shutters. It should be cut into one-inch lumber, ten to twelve feet long, six inches and up wide and graded firsts and seconds. Often the bird's-eye marking shows only on one side of the board. By cutting into one-inch boards there is a better chance of securing the marking on both sides..

Would you kindly tell me where I could get a spool machine that will make one spool per second or nearly so? Is the white birch which is used in spool making in the United States, the same as ours? Would yellow birch work in spools or pill boxes? How much plumpage is allowed for shrinkage and turning?

Spool or box lathes making 60 or more spools a minute can be secured from Jackson & Caron, St. Alexis des Monts, Que. A spool lathe costs about $250 and a box lathe $240, f.o.b. factory.

The white birch in Canada is the same as that used in the United States. The yellow birch is not fit to make spools of, as it is too hard for the tools. It is used sometimes, however, for making pill boxes.

The allowance for plumpage is generally about as follows: 1-16-inch on squares (bars) from 1-inch to 1¾-inch. From that size up to 3-inch square the allowance is generally ⅛-inch. For instance, if the market calls for 2½-inch spool bars, they are made 2⅝-inch.

In connection with this subject the following paragraph from a recent report to the Canadian Department of Trade and Commerce by Mr. J. M. Mussen, trade commissioner at Leeds, Eng., is of interest: "Various firms in this district use considerable quantities of birch bars for the making of spools and bobbins, and Canadian manufacturers should be able to take advantage of the trade which offers in this direction. Birch is described as being the most suitable wood, as it is said to dry quite white, although rock maple might be taken as a substitute. The bars, which should be tied in bundles of twenty to facilitate handling during transit, usually measure 1, 1¼, 1⅜, 1½ and 2½ inches square and from 2 to 4½ feet long, in multnples of 6 inches."

We would be greatly obliged if you could give us information re prices of hemlock, tamarac and cedar ties now being paid by the C.P.R., G.T.R., and C.N.O., at Ottawa and Georgian Bay points. We would like the prices on 7-inch x 7-inch x 8 feet, and 6-inch x 6-inch x 8 feet. Can you give us also prices now being paid for 8-foot cedar posts 4½-inch and up top, peeled; also 5-inch and up top, peeled?

The railroads are now paying at Ottawa and Georgian Bay points from 30 cents to 40 cents for ties of the varieties mentioned, delivered alongside the tracks. The variation in prices is regulated almost solely by the locality. The 7-inch square size is most in demand. For 8-foot cedar posts the price paid is at present 10 cents. This applies to both the 4½-inch and the 5-inch variety, the latter being most in demand.

What do you understand as to the American tariff on lumber? Is or will the maximum tariff apply to Canada?

This is a question which no one can answer at present. On March 31, 1910, the maximum tariff is to apply automatically to imports from foreign countries not specially exempted by proclamation of the President of the United States. The President's proclamation of exemption is to apply to countries which impose no restrictions upon the importation of United States products and do not unduly discriminate against the United States or its products, or do not pay an export bounty or impose an export duty or prohibition upon the exportation of any article to the United States which unduly discriminates against the United States or its products. The maximum tariff includes the regular duty and, in addition, 25 per cent. ad valorem.

Whether Canada will be especially exempted by the President's proclamation on March 31, it is not possible to foretell. The only light to be had upon the situation is from public utterances by President Taft and Sir Wilfrid Laurier, both of whom have done their best to allay any fear of a tariff war between Canada and the United States. Those who fear that Canada will not be exempted base their fears upon the prohibition of the export of logs from certain Canadian provinces, the proposals of other provinces to adopt similar measures, and the commercial treaty between Canada and France, which is considered in some quarters as unduly discriminating against the United States.

President Taft's words, referred to above, were in part as follows: "I conceive that this power was reposed in the President with the hope that the maximum duties might never be applied in any case, but that the power to apply them would enable the President and the State Department through friendly negotiations to secure the elimination from the laws and the practice under them of any foreign country, of that which is unduly discriminatory. No one is seeking a tariff war or a condition in which a spirit of retaliation shall be aroused."—See also the editorial reference to this matter in this issue.

Personal News of Interest to Lumbermen

Mr. G. W. Robinson, manager of the Berlin Machine Works, Hamilton, has gone on a trip to the Pacific Coast. He will be away for about six weeks.

Hon. C. W. Robinson, leader of the Opposition in the New Brunswick Legislature, in the course of an interview recently declared in favor of a law to prevent the export of pulpwood from Crown lands.

C. M. Edwards, J. B. Fraser. R. G. Edwards, W. H. A. Fraser, H. Robinson, H. K. Egan, R. L. Blackburn and Russell Blackburn, of Ottawa, are the incorporators of a company to be known as the Ottawa & Montreal Power Transmission Company.

Victor Stewart Patton, of the Beaver Lumber Company, Winnipeg, was married on February 8th to Miss Evelyn Powell, younger daughter of C. Berkeley Powell. The honeymoon was spent in the Eastern States, after which Mr. and Mrs. Powell took up their residence in Winnipeg.

Mr. J. M. Curry, who has just been elected mayor of Amherst, N.S., is a man of sterling business ability and experience. He is secretary-treasurer of the Rhodes-Curry Company, at Amherst, and also vice-president of the Toronto-Cuban Grape Fruit Company, Limited, of Toronto.

A. P. Ebert, hardwood manufacturer, Wiarton, Ont., favored the "Canada Lumberman" with a call last week. Mr. Ebert states that the prospects for the coming season's trade in his district are unusually promising. The winter has been a good one and the operators have been able to obtain a very large cut.

L. P. Graves, of Graves, Bigwood & Company, Buffalo and Toronto, is at Augusta, Fa., but he expects to return home soon. The Canadian logging camps of Graves, Bigwood & Company are doing well, the snow not being extremely deep, so that the full cut of 65,000,000 feet or so is likely to be made.

Lieut.-Col. J. B. Miller, president of the Parry Sound Lumber Co., and of the Canadian Lumbermen's Association, left Toronto with his family on Feb. 10th for a trip to the old country. The party sailed by the Adriatic from New York, and will be away about two months. Their present istention is to go on a motoring tour in England and also in France.

Mr. T. A. Wilson, general manager of the Western Canada Lumber Company, of Regina, Sask., took a trip recently to the Pacific coast, and visited his brother, Rev. R. J. Wilson, pastor of St. Andrew's church, Vancouver. He will extend his trip to Victoria and other points upon the island, and will also visit the larger mills of the State of Washington.

A number of changes are announced in the Woods and Forests branch of the Ontario Department of Lands, Forests and Mines. Mr. Chester Dies, who has been with the department for some time, succeeds Mr. Harry Cartwright as assistant registrar of the department. Mr. Harry Gillard takes the place of the late Mr. Kenneth Miller as accountant of the Woods and Forests branch, and Mr. John Houser succeeds Mr. Gillard in the latter's old position in charge of the fire rangers. Mr. George Harris is made Mr. Houser's assistant, and Mr. Stanley Meeking, a new appointee, becomes junion clerk of the department.

Henry Eaton, of Fitchburg, Mass., a wholesale lumber dealer, was in St. John, N.B., recently on a purchasing trip. Speaking of the prospects of the American lumber market, Mr. Eaton said that it showed signs of being strong, provided serious strikes in New York did not interfere. One big strike was now on there in the building trade, but it seemed as if it would reach an amicable settlement shortly. The New York market was so big that its condition always made prices for the Eastern States. Lumber of the style used in the United States, nine feet and under and nine inches and under, was selling now at $23 per thousand.

A Detroit despatch reports that at a meeting of the board of managers of the Lumber Carriers' Association, certain by-laws of the association were changed to conform with federal anti-trust laws. The meeting was held behind locked doors and was attended by 23 or 25 of the 28 members of the board. The old by-laws of the association provided for the maintenance of uniform rates for carrying forest products on the great lakes, and though these by-laws have been in effect for some time, their elimination was accepted without dissension. No official statement was obtainable relative to rates for carrying lumber during the coming season, but it is understood that shippers will find individual members of the association quoting a rate of $2.50 per thousand feet from the head of the lakes to Lake Erie points.

Some chartering of tonnage for next season on the Great Lakes is being done at North Tonawanda, N.Y., but thus far only where boats outside of the Lumber Carriers' Association are offered. Chartering is reported by local dealers who have stock to come from the Georgian Bay district at a rate of $2. This rate is regulated largely by the announcement that tonnage is to be obtained from the head of the lakes at $2.25. These figures are offered only for the first loads.

Railways Ignore Claims by Shippers

Editor "Canada Lumberman":—We were pleased with your editorial on lumber freight difficulties. They certainly do demand a remedy, especially in connection with flat cars. It is a daily occurrence for shippers to be supplied with flat cars that are covered all over their decks with from two to six inches of frozen cinders, ballast and ice, for which the railway people alone are responsible, and it is impossible for the shipper to clean them off until warm weather thaws out the frost. We frequently write on our weigh bills that there is the above on the cars, but no attention is given the matter, and that is a profit to the railway and an unjust tax on the man who pays the freight. Careless weighing is another common occurrence, and always a gain to the railway. Another example: We received a box car of hay, for which we were charged by the shipper 12 tons, and paid freight on 13 tons. We shipped a customer two cars of dry slabs cut of the same pile. One car contained 16 cords, and the freight was less than $1 per cord. The other car had 11 cords, and the freight on it was $18. We could give you scores of items similar.

Editor "Canada Lumberman":—For the past two or three years we have had very little experience in car shipments from Canada, our lumber having largely come forward by water. We only know by former experience that the Canadian railways pre-suppose every claim to be unfounded, and instead of taking the subject up in a spirit of fairness towards the shipper, their claim agents consider it their duty to avoid the payment of all claims, whether just or unjust. The American railways act on an entirely different principle. They believe that the railways, like others, make mistakes, and that shippers frequently are entitled to a fair adjustment of claims. Some of the roads are very prompt and liberal indeed in the adjustment of matters of this kind.

The editorial dealing with lumber freight rate difficulties which appeared recently in the "Canada Lumberman and Woodworker" brought out the two letters published above. The first is from a large firm of manufacturers in Ontario, and the second from a wholesale house in North Tonawanda, both of whom desire that their names be not published. The subject is of vital importance to the lumber trade and cannot be given too much publicity. If you have had troubles along the same line it would be a good thing to let us publish an account of them and help to bring the question before the Dominion Board of Railway Commissioners.

Mr. James Lawler, secretary of the Canadian Forestry Association, in a recent address before the Canadian Club of St. John, N.B., urged that as soon as possible a survey should be made by the province of all the land in the hands of the Crown and a decision arrived at as to whether it is fit for agriculture or not. If not fit for agriculture it should be set apart for a permanent timber reserve and all efforts of settlers to get into it should be resisted. If they are honest settlers, it is a crime to let them go into places where they will be unable to make a living, and if they are dishonest they intend to commit a crime in skinning off the timber when they pretend to engage in farming.

Canada's Lumber Production During 1908

The Forestry Branch of the Department of the Interior has issued a bulletin upon the forest products of Canada for 1908. This is the first attempt of the Forestry Branch to gather detailed statistics of this nature, and consequently the figures are not to be relied upon as absolutely correct, but they are stated to be close approximations in most cases. The figures given were secured entirely through correspondence and are based upon reports received from 1,409 lumbermen distributed throughout the Dominion as follows: Ontario, 591; British Columbia, 143; Quebec, 277; New Brunswick, 180; Nova Scotia, 112; Alberta, 40; Manitoba, 40; and Saskatchewan, 26. No replies were received from Prince Edward Island. The total lumber cut of the Dominion by provinces is given as follows:

	M. bd. ft.	Av. value per M.	Value
Ontario	1,294,794	$18.84	$24,399,077
Quebec	690,135	15.70	10,838,608
British Columbia	647,977	14.05	9,107,186
New Brunswick	308,400	13.23	4,081,402
Nova Scotia	216,875	13.25	2,873,730
Saskatchewan	91,166	17.29	1,576,820
Manitoba	56,447	15.38	867,969
Alberta	42,382	13.99	593,244
Total	3,348,176	$16.27	$54,338,036

The production of shingles and laths was: 1,499,396 shingles, valued at $3,101,996; 671,562 laths, valued at $1,487,125.

Statistics of cross ties purchased in 1908 are given in the bulletin. They were secured from reports from 47 steam railway companies having a total of 25,772 miles of track, and 32 electric railways with 818 miles of track. The steam roads purchased 13,738,157 ties, at a cost of $5,189,674, and the electric roads purchased 240,259 ties, at a cost of $92,011, giving a total for the Dominion of 13,978,416 ties, valued at $5,281,685.

The total pulp production was 363,079 tons, valued at $2,931,653. Of this quantity, 278,570 tons was mechanical, 82,331 tons sulphite, and 2,178 tons soda pulp.

The total production of lumber, lath, shingles, cross ties, poles and pulpwood was as follows:

Material		Quantity	Value
Lumber	M b.f.	3,348,176	$54,338,036
Shingles	M.	1,499,396	3,101,996
Lath	M.	671,562	1,487,125
Cross ties	pcs.	13,978,416	5,281,685
Poles	pcs.	185,807	284,549
Pulpwood	cords	482,777	2,931,653

Trade Enquiries

The Dominion Government Trade and Commerce reports contain the following trade enquiries. Readers of the "Canada Lumberman" may obtain the names of enquirers by writing us, enclosing stamped envelope and stating number of enquiry:

100. Mahogany, walnut and Spanish cedar—A Mexican exporter of mahogany, walnut and Spanish cedar, the latter suitable for manufacturing cigar boxes, is desirous of getting in touch with Canadian importers of same. Quotations could be made c.i.f. St. John, N.B.

147. Box shooks, wood, etc.—A London firm handling large quantities of box shooks, and also of manufactures of wood generally, invites quotations from Canadian manufacturers.

148. Maple wood—A London company who are large buyers of maple wood, would be glad to hear from Canadian shippers.

190. Agency abroad—A correspondent in Egypt reports a good market in that country for Canadian paper and cardboard, and would like to get into touch with manufacturers in the Dominion open to send supplies.

217. Maple flooring—A Manchester firm asks for prices and dimensions of maple flooring from Canadian manufacturers of same.

222. Pine scantlings—A Lancashire firm asks for prices and dimensions of pine scantlings from Canadian shippers of same.

225. Pine deals—A Manchester firm asks for prices and dimensions of pine deals from Canadian shippers of same.

226. Spruce boards—A Manchester firm asks for prices and dimensions of spruce boards from Canadian exporters of same.

231. Pine sidings—A Manchester firm now buying in the United States asks for prices of best pine sidings 2 inches by 8 inches to 20 inches from Canadian exporters of same.

232. Wood pulp—A Manchester firm wishes to correspond with Canadian exporters of wood pulp.

233. Pine sidings—A Manchester firm asks for prices of pine sidings, 1-inch, 1¼-inch, 1½-inch and 2 inches, from Canadian exporters of same.

Effect of New German Tariff Upon Lumber

Under the new tariff arrangement with Germany which goes into effect on March 1st, the following are among the reductions effected in the duty upon imports of Canadian products into that country:

Timber sawn longitudinally or prepared in some other way not planed: Hard from 1.25 to 72 marks and from 10 to 5.76 marks per cubic metre. Soft from 1.25 to 72 and from 7.50 to 4.32 per cubic metre.

Wood for casks, etc.: Of oak, from 30 to 20 and from 2.40 to 1.60 per cubic metre. Of other hardwood, from 40 to 30 or from 3.20 to 2.40 per cubic metre. Of soft wood, from 2.40 to 1.80.

Semi-pulp (semi-paste for the manufacture of paper or cardboard), soft or solid, whether bleached or dyed, of wood straw, esparto or other vegetable fibres, mechanical or chemical, from 3 to 1.25.

Mill board (pasteboard), moulded or pressed cardboard, etc., cardboard, glazed, vulcanized fibre, etc., remains for present at 6 marks.

Chemical or mechanical wood pulp cardboard, etc., from 4 to 150 marks.

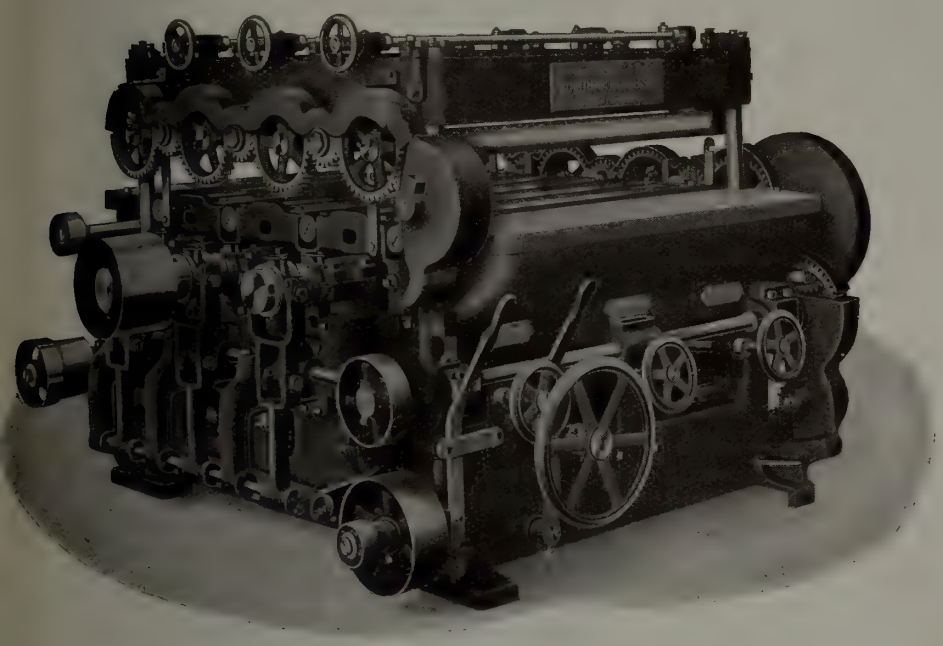
Wood spirit, methylic alcohol, crude and acetoneride, from 5 marks to free. Wood spirit, refined, from 20 to 8 marks.

Exports of wood and manufactures of wood to Germany from Canada are not extensive, and they fluctuate greatly from year to year. During the last five years their values have been as follows: 1909, $3,254; 1908, $82,374; 1907 (9 months), $3,385; 1906, $34,916; 1905, $57,146.

The Standard Caul Box

The "Insurance Standard Woodworker," published by the lumber insuring mutual companies of the United States, gives the following description of the standard caul box, for drying and heating lumber before glueing it together: "The steam pipes should be about 2½ feet above the floor and should rest upon iron pipes. The sides of the box should extend 6 inches below the steam pipes. There should be no bottom to this box; the inside of the box should be lined with tin, like a fire door. The moisture escapes and anything that falls through the pipes drops to the floor. The tin lining reflects the heat upon stock to be dried. This box would not serve for drying green lumber, but is most efficient for the heating and redrying of dry lumber, such as is used in glue rooms."

The utility of this type of caul box is attested in a letter received recently by the Lumber Mutual Fire Insurance Company of Boston, from the Hughes & Son Piano Manufacturing Company, of Foxcroft, Me., which was in part as follows: "Our experience with the standard caul box has proved more than satisfactory. Before making the change we were compelled to use about 10 pounds of steam to get the box hot enough for our stock. Now it is much more satisfactory with 2 or 3 pounds of steam."



Machinery and Equipment

What Manufacturers of Logging, Sawmill and Woodworking Appliances are Doing

A High Grade Triple Drum Sander

J. A. Fay & Egan Company, the well known woodworking machinery manufacturers, are introducing to the trade their new triple drum sander, which is designed to meet the highest requirements in furniture piano and woodworking shops of all kinds where a perfect surface is wanted either for varnishing or painting. We are pleased to illustrate this new sander and call our readers' attention to some of the leading features of this machine as shown in the manufacturers' new catalogue.

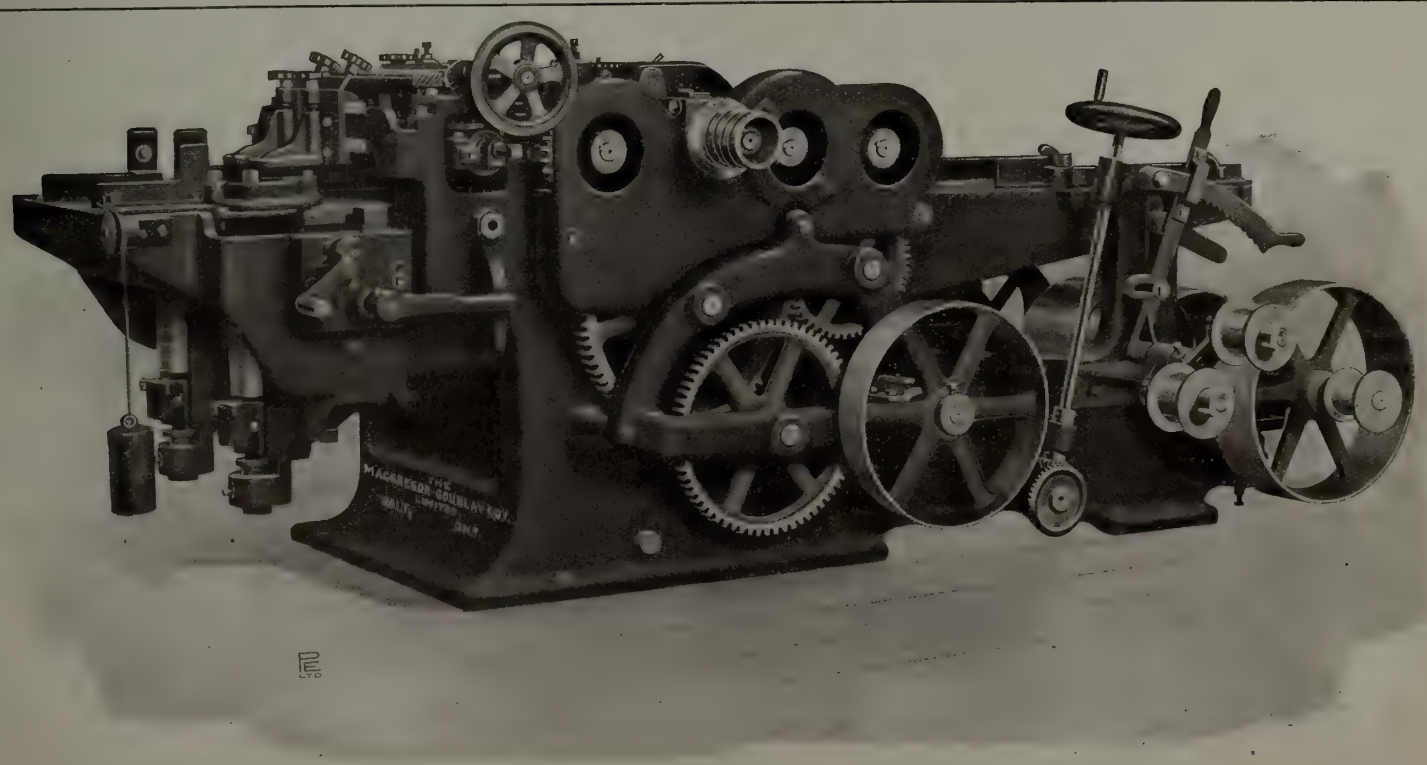
The most noteworthy feature on this machine is an automatic take up device which holds the paper tight under all working and atmospheric conditions. The drums are made of iron and steel and are covered with specially prepared non-stretchable, combination rubber and felt, which makes a cushion for the sand paper. The drums are designed with a device for placing the sandpaper about them and giving it the proper tension in the shortest possible time. It is said that all three of the drums can be covered with sandpaper by any ordinary mechanic in seven minutes.

New No. 225 Triple Drum Sander.

The oscillators are pivotted on a rigid shaft so that all weight is taken off the drum shafts, thereby preventing wear in the drum shaft bearings. The oscillator bearings cannot wear, as the shaft does not touch the walls of the bearings, which are lined with vulcanized fibre felt.

The bed frame is made to lift by power, clear of the drums. This gives easy access to the drums, which is a great advantage, if in need of repairs. The opening made when the bed frame is hoisted, is large enough to permit of removing the drums from the machine without disturbing the table plates. This feature is said to be found only on the Fay & Egan machine, and is clearly illustrated in the manufacturers' catalogue.

In this catalogue, the manufacturers call special attention to the column, which is made extremely heavy, with the metal so distributed as to eliminate all vibration. They claim it to be the heaviest and strongest column known to a sander of any make.



Feed consists of eight rolls, four top and four bottom, all powerfully geared. The lower rolls are placed one on each side of each drum. The upper rolls are carried in a frame, and are vertically adjustable to receive material up to 8-inch thick. The machine is made in eight sizes, 30-inch, 36-inch, 42-inch 48-inch, 54-inch, 60-inch and 80-inch wide.

Readers are invited by the Fay & Egan Company to write for their new catalogue, which will be sent postpaid. The address of the company is 465-485 west Front street, Cincinnati, Ohio.

A New Planer, Matcher and Moulder.

The MacGregor Gourlay Company, Limited, Galt, Ont., have got out an entirely new planer, matcher and moulder, which should prove of much interest to woodworkers. In their catalogue the new machine is known as "Y G Planer, Matcher and Moulder." It planes 24-inch wide, 8-inch thick and matches 14-inch wide and has an adjustable moulding head. All its gears are cut from the solid, and all its journals are machine ground. The machine is designed to meet the demand for a medium priced self-contained planer and matcher, and the company claim that it is remarkable for its power, convenience and serviceability. The frames are heavy, well ribbed and braced and extend to contain countershaft, giving long driving belts. The bed is cast in one piece with deep and heavy ribs. It is gibbed to the planed ways in the frame and is raised and lowered by heavy screws supported on ball bearings, which are operated by shafts and gears at a convenient point.

The main cylinder is forged from solid steel slotted on two sides revoiving in long self-oiling bearings and lined with genuine babbit metal. The journals are 1 15-16-inch diameter and are driven on both sides by 5-inch belts. The moulding head is adjustable and can be regulated to steel, and its journals are 1 11-16-inch diameter, slotted on four sides and any depth without stopping the machine It also, is forged from solid driven by 5-inch belt. The feed is made up of four 4½-inch diameter

New Planer, Matcher and Moulder Manufactured by MacGregor-Gourlay Company.

feed rolls, which are all driven by heavy cut gears. Three changes of feed are provided by sectional pulley, namely, 31, 46, and 61 feet per minute.

The matcher spindles are made from high grade steel and revolve in long self-oiling bearings. They have improved foot step support and can be moved to any position on the table.

The latest design of chip breaker and hold down pressure bars are used, and all adjustments are made while the machine is running. The gears are all carefully covered and none of them run upon studs, but are fastened to shafts running in bearings. The machines are each provided with one pair of himer heads or brass slotted heads as desired. Fast and loose pulleys are provided 12 by 6½-inch, and should make 900 revolutions. The weight of the machine is 5,950 pounds.

The Rathbun Company, of Deseronto, Ont., have ordered a portable ground skidder and loader from the logging machinery department of Allis-Chalmers-Bullock, Limited, Montreal. This machine is of the sliding type, being designed to travel over the tops of the cars, and will be used principally by the Rathbun Company for hauling their logs from the lakes and streams, down which they have been driven, and from some convenient point, hauling and loading them upon the cars for transportation to the mill. The machine will be practically of entire steel or other metal construction, and will be furnished with return line apparatus to take the grabs back to the point where they are to be hooked, thus reducing labor to the minimum. It will be furnished also with a special high power spotting drum and apparatus for tightening the guys to the boom.

The Rothfuss-Howard Iron Works, Williamsport, Penn., manufacturers of sawmill and special machinery, have favored the "Canada Lumberman" with a copy of their calendar for 1910. The calendar is attractively designed, and the decoration includes a colored picture entitled "The Call," which depicts an elk standing near the water in a wild mountainous country, listening to the call of its mate or possibly the decoy call of a hunter. The picture and calendar pad are set upon an attractively decorated brown mount.

Lumber Matters in the Law Courts

Mr. Justice Gregory and a special jury, at Victoria, B.C., have awarded Samuel Guthries, a shingle sawyer, $1,250 damages from the Huntting Lumber Company for the loss of two fingers.

Wrongful Sale of Stock—Mr. H. H. Heath has succeeded in his suit to obtain judgment at Vancouver, for $3,000 against Mr. R. H. McKee. former president of the North Arm Lumber Company, paid for stock sold to the plaintiff a month before the collapse of the company. Alleged misrepresentation of the company's financial condition was the ground of the action.

Breach of Contract for Sale of Lumber—In the case of Wood Bros. v. Gall Lumber Company of Toronto, which recently came before Judge Latchford, the defendants had purchased from the plaintiffs certain logs to be cut into timber and paid for at stated prices per M. feet. The defendants put forward many grounds as absolving them from performance of contract. The court held that the defendants had failed to give shipping orders simply because they could not make sales, and having refused to give shipping orders, the plaintiffs were justified in selling the lumber at a loss; defendants were liable for said loss, $2,577.59, with interest and costs.

An International Booming Suit—A suit involving the sum of $100,000 toll on logs and booming charges, has been commenced by the Rainy River Boom Corporation against the Rainy River Lumber Company, before Mr. Justice Mulock in the non-jury sittings at Toronto. The plaintiffs, who claim they have the sole rights for the booming of logs brought down by the lumber companies operating in that district, set out that the defendant company refused to pay the charges entailed during the years of 1906 and 1907. The case has been carried through three courts in Minnesota where a final judgment was given in favor of the plaintiff company. The defendant company claims that it is not bound to pay the tolls because of the fact that the booming is done on an international boundary line.

Verbal Agreement for Sale of Limit—In the action of Smith v. Trainer, which recently came to court in Vancouver, the court has to consider whether an agreement respecting timber limits can be made verbally and be binding. The action was brought to force the defendant to complete a contract for the sale of timber limits, and Mr. Justice Gregory has continued a temporary injunction until the trial case will be argued. The plaintiff states that the bargain was verbally made and it was afterwards put into writing but not signed. The defence pleaded the Statute of Frauds, which requires an agreement for the sale of land and also for goods to be in writing, and to this Mr. Griffin replies that it is the generally conceded opinion that timber limits are neither lands nor goods and that an agreement with respect to that kind of property can be made verbally.

Litigation Relating to Water Power Lease—David and Alex. McLaren, lumber manufacturers of Buckingham, Que., have taken action to have the lease of a water power sold by the Provincial Government to Hanson Bros., of Montreal, revoked. McLaren Bros. claim the water power of Paughan Falls, a rapids on the Gatineau river, on the ground that they own all the land around the falls, and, therefore, as the river is not a navigable stream, they own the water and bed of the river at the falls, each of the brothers owning half. In this district lots traverse the river, the owner of the land being the owner of the bed and water of the river in the area traversed by their land. This will be another point used by the plaintiffs in their plea. As it is, McLaren Bros. own the land right to the water level, and Hanson Bros. own the water power, and neither can develop the resources of the river at this point.

American Capitalists Investing in B. C. Timber

The acquisition of British Columbia timber limits by American capitalists continues to occur frequently. Wm. F. McKnight, a priminent operator of Grand Rapids, Mich., accompanied by Col. Catrow, of Dayton, Ohio, reached the coast recently to investigate a number of timber propositions. Col. Catrow represents large Ohio banking interests. If their quest is successful several million dollars will be invested on Vancouver Island and the mainland during the next few months. Mr. McKnight is already heavily interested on Vancouver Island. Last year he was the moving spirit in organizing a syndicate which acquired vast timber holdings in the Jordan river district on the west coast of the sland. The limits were vested in the Michigan-Pacific Lumber Company, with a capitalization of $1,500,000. Mr. McKnight is secretary of the company.

Since his last visit to the coast several months ago, Mr. McKnight, in conjunction with Michigan, Chicago and Salt Lake capitalists, organized the New Miami Lumber Company, with a paid-up capital of $500,000. In this corporation, of which Mr. McKnight is president, is vested the ownership of eight hundred million feet of timber in the Jordan river district. The company has not elaborated its plans, but in all probability a large mill cutting for the domestic and export trade will be erected next year. In the meantime, the company intend to engage in logging operations.

"There will be a great deal of American capital invested in British Columbia timber limits this year." said Mr. McKnight in an interview. "Our leading operators have already made a start and their example is to be followed by others. Although stocks are light in the eastern and middle States, the demand is not exceptionally good, but I look for marked improvement shortly in harmony with the activity in other industries." Mr. McKnight also had a large share in the purchase of the Vancouver Island limits of Messrs. Sayward & Company. The properties have been turned over to a new corporation styled the Michigan, Puget Sound Lumber Company, with a capitalization of $1,250,000. The mill plant is to be enlarged.

On February 18th a splendid concatenation of Hoo-Hoo was held at Winnipeg in the Travellers' Hall. On account of the presence of a great number of lumber in the city to attend the convention of the Western Retail Lumbermen's Association, the attendance at the concatenation was large. After the eyes of all the young kittens had been opened and the black cat had finished her capers, an enjoyable banquet was held and a smoking concert was given which included a lively programme of vaudeville sketches and an interesting boxing match.

John Norris on the Tariff Tangle

Mr. John Norris, chairman of the committee on paper of the American Newspaper Publishers' Association, in a recent address to the Ohio Daily Newspaper Association, said that if free competition and normal conditions should prevail in the paper trade, news print should be delivered in pressrooms at $35 a ton, or $1.75 per 100 pounds. He charged that newspapers were taxed $8 a ton above that figure on one million tons, or $8,000,000 per annum, because of the ignorance and lax methods of print paper makers, and that the same causes were imposing a penalty of $50,000,000 per annum upon the users of all kinds of paper, including book and writing, and thereby taxing knowledge. More than $2,000,000 per annum was paid by newspaper publishers for atmospheric moisture in print paper, he declared. Mr. Norris pointed out the practicability of converting pulp into paper at New York harbor at a cost of $35 a ton, delivered in New York pressrooms, and said the tangle with Canada as to pulpwood supply was an embarrassing development in that direction

---

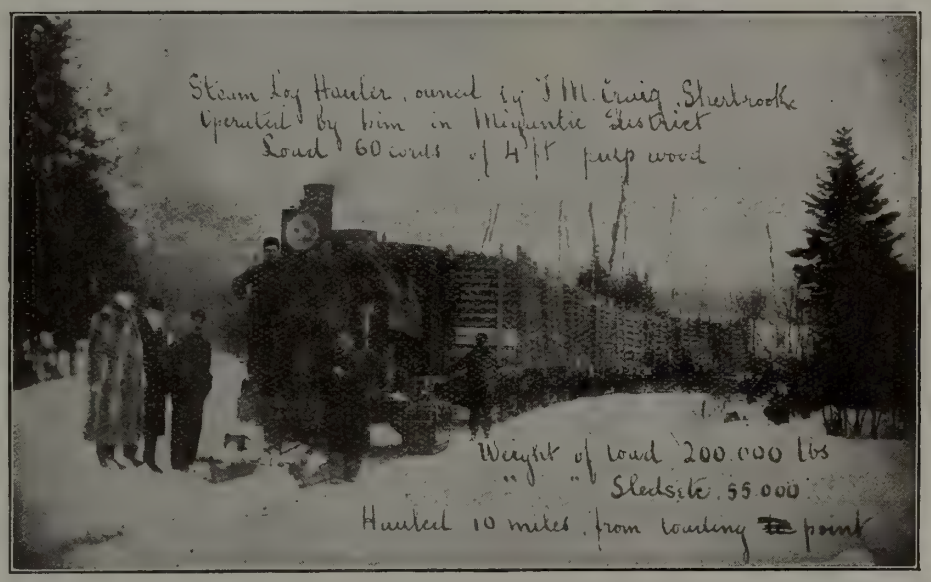
Hon. Clifford Sifton, in a recent interview at St. John, N.B., relating to the matter of forest protection, said: "The first step is to stop fires. Our information is that the destruction of forests by fires along the Intercolonial Railway is very great. One of our committees passed a resolution which will be forwarded to the Government, and I am sure the Government will adopt it. In regard to other railways, it will be necessary to proceed by legislation. The ground the Commission took was that the Government railway ought to be treated the same as other railways. That is, it should either furnish efficient fire protection, or pay for the cost of such protection."

Burns Saws

THE E.R. BURNS SAW CO. LIMITED
CHISEL TOOTH
TRADE MARK
SAW.
TORONTO.

A Lumberman from Ottawa Valley writes us as follows:

DEAR SIRS:



The Solid Tooth Saws I purchased from you last spring have been doing first class work ever since. I have never had any trouble with them. The Burns Saws are the best, as they are evenly tempered and will keep an edge longer than any other make of saw used here. Yours truly.

Such letters as this prove that **Burns Solid Tooth Saws** are as famous as their Inserted Tooth Saw, containing genuine Hoe Fittings.

WANTED & FOR SALE DEPARTMENT

PUBLISHERS' NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 15 cents per agate line ($2.10 per inch) each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Employment Wanted" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies.

Advertisements of "Employees Wanted" will be inserted at the rate of two cents a word net. Cash must accompany the order.

Advertisement must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue.

WANTED—LUMBER, ETC.

Cedar Posts Wanted

200 CORDS CEDAR POSTS 5 AND UP AT the small end. Address Box 836, CANADA LUMBERMAN, Toronto. 5

Wanted White Pine Pump Squares

7"x7", 6"x6" AND 5"x5". HIGHEST MARKET Prices paid, also 2" and 3" Tank Lumber. ONTARIO WIND ENGINE AND PUMP CO., Toronto tf

Wanted Hard Maple and Beech

WANTED SEVERAL GOOD STOCKS OF Hard Maple up to 1,200,000 ft. and a quantity of Beech. Apply Box 888 CANADA LUMBERMAN, Toronto. 5

Pine and Hemlock Logs Wanted

WE ARE IN THE MARKET FOR PINE or Hemlock Logs to be sawn during May or June on Georgian Bay—State quantity. FIRSTBROOK BOX CO., Penetang. 5

Basswood Wanted

TWO MILLION FEET OF WINTER CUT Basswood. Can use full run of logs. Cut to order. For particulars address Box 879, CANADA LUMBERMAN, Toronto. tf

Hemlock Wanted

1,000,000 FEET OF HEMLOCK 1 INCH and 2 inch trimmed and edged. Cash less 2%. Send full particulars to Box 911, CANADA LUMBERMAN, Toronto. 5

Rock Elm and Hard Maple

WANTED—TO CONTRACT FOR SUPPLY of Rock Elm and Hard Maple Plank 3" and 3½" thick for bending purposes. Quote prices to N. M. CURRIE, Box 304, St. Marys, Ont. 5

Logs Wanted

WANTED TO PURCHASE FOR SPRING delivery, Sawlogs in Red and White Pine, Spruce or Jack Pine. Delivery at Haileybury or in Montreal River, EMPIRE LUMBER CO., LTD. Latchford, Ont. 6

Birch Wanted

WANTED—SEVERAL STOCKS OF GOOD Birch to be cut to order. Any quantity up to two million feet for next summer's delivery. Apply Box 918, CANADA LUMBERMAN, Toronto. 7

Wanted Basswood and Maple

A QUANTITY OF INCH BASSWOOD 4/4, 6/4, 8/4, Hard and Soft Maple, for immediate shipment, also half million feet of same stock for next summer delivery. R. W. BAXTER, Chatham, Ont. 5

Spruce Wanted

WANTED—ABOUT 500 M FEET B. M. OF round long Spruce Timber 20 feet and up, 10" at small end and up, delivery by water during next summer. Address JAMES SHEPPARD & SON, Sorel, Que. 5

Logs Wanted

WANTED TO BUY OR SAW BY THE thousand, one million feet of Hemlock. Pine and Cedar, Tamarac or Spruce Logs. Good harbor on Georgian Bay, rail and water shipment. Address, Box 931 CANADA LUMBERMAN, Toronto. 8

Norway Pine Wanted

WANTED TWO MILLION FEET 2"X5" AND wider, sound knotted dry Norway Pine. Lengths—75% 9, 10, 18 and 20 ft. 25% 12, 14, and 16 ft. Send memorandum of stock and advise lowest mill price, quick. THE GERMAIN COMPANY, Pittsburg. 5

Soft Elm Wanted

WANTED 12/4, 14/4, 16/4, No. 1 com. Soft Elm, prompt shipment, also 20 cars Soft Elm 1x12" and up in lengths 6½, 7, 8, 14 and 16 ft. LUCAS E. MOORE STAVE CO., 1 Broadway, New York, N. Y. 5

Hardwood Squares Wanted

PARTIES IN POSITION TO SUPPLY Hardwood Squares of various sizes and dimensions kindly send for list of sizes required to Box 886, CANADA LUMBERMAN, Toronto. 5

Wanted—C. and B. Winter Cut Basswood

WANTED 15 TO 20 CAR LOAD No. 1 COMmon and better white winter-cut Basswood to be plump, 1 inch thick when dry. For further particulars apply to Box 889 CANADA LUMBERMAN, Toronto. tf

Wanted Hard Maple and Soft Elm

WANTED FOR IMMEDIATE SHIPMENT two cars 2" and 3" Hard Maple Plank, also for shipment any time during 1910, up to fifty cars Soft Elm, 1" x 12" and up wide x 6½' 7' 8' 13' 14' and 16' long. Address ROBERT BURY & CO., Lock Box 408, Teeswater, Ontario. tf

Wanted

Birch, Basswood, Ash, Elm and Maple

WE REQUIRE THREE MILLION FEET 1" to 4", shipment when dry, can use LOG RUN DEAD CULLS OUT. Inspection at mill. Box 919, CANADA LUMBERMAN, Toronto. tf

Wanted

Birch, Basswood, Brown Ash

for next summer delivery

500,000 feet, 1 to 4" common and better Birch
500,000 " 1" log run Basswood, M. C, out
200,000 " 1" log run Brown Ash, M.C, out
500,000 " 1" mill cull Hardwood

Send us your stock list of any dry lumber and quote us your lowest cash price either for prompt or later delivery, If you have large stock, will send our inspector to take up the lumber.

C. E. CROUSE LUMRER CO.
6 Canastota, N. Y.

FOR SALE—LUMBER, ETC.

Lath For Sale

400 M 1" SPRUCE LATH, DRY AND WELL manufactured of first class quality. Address, Box 309 SOREL, QUE. 7

White Oak For Sale

ABOUT 75,000 feet WHITE OAK LOGS 10 TO 16 ft. long. Will cut into bills this coming spring. Apply DAVID CONKLIN, Kingsville, Ont. 5

Spruce and Pine For Sale

Estimated amount of timber about 240.000.000 feet. Mills and limits situated in Ontario, the price is right For further particulars address W. B. MACLEAN, Brockville, Ont.

N. B. Principals only. 6

Oak Flooring

Oak floors laid nearly 200 years ago in Versailles and Fontainebleau are still in excellent state of preservation. The famous colonial mansion "Adena" at Chillicothe, Ohio, which was built in 1805, still has the original oak floors well preserved. With the advent of the use of white pine, oak was used to a less extent for flooring except in the finer houses. At this time when kiln drying was almost unknown the more modern methods of heating are said to have been injurious to oak floors.

The first oak flooring was made by hand, and later it was made from boards which were matched by machinery after being ripped to width. Most of such flooring was manufactured at local planing mills and was cut for each separate order. A Wisconsin manufacturer began the practice of cutting hardwood flooring and ceiling into shorter lengths and butting the ends of the pieces by machinery. This was soon followed by end matching of pieces, which was perfected by a Chicago firm and patented. The patent was contested in the courts and at first upheld but later the decision was reversed and the manufacture of flooring became an important industry. The present high demand for oak and other hardwood floorings is largely due to the construction of more sanitary floors.

Not Always the Teeth

It has been said that a band resaw cutting out of a true line in stock as narrow as 8-inch, needs attention to the teeth, as such work shows that the teeth are filed too long on one side. This can hardly be exactly right in all cases, as, for instance, a saw is fitted on a machine where all the teeth are of an exact length and finished square across, with the emery wheel. The writer had to make quite a long trip to correct just such trouble. The fitting of the teeth was as good as one ordinarily finds, so the fault was laid on the feed rolls of the machine, for want of some other excuse for the bad work. The man taking care of the machine did his own filing, and that was all he did, as he knew nothing about tensioning the blade. After the saws were properly tensioned they ran all right, at more than double the feed, with no change to the machine.—Sawyer, in "The Woodworker."

Review of Current Trade Conditions

Ontario

Lumber prices generally in Ontario are well maintained. A few lines are becoming exceedingly scarce, notably 1x4-inch, 5-inch, 6-inch and 12-inch mill run strips, which are reported to be pretty well worked out of the market. 8 and 10-inch are not long, but the supply is fairly good. 1¼-inch, 1½-inch and 2-inch in all grades of mill cull and better are reported scarce. Lath are also scarce, and the demand is good. The outlook for the spring trade is very promising. A traveller who recently visited some of the woods in the Georgian bay district reports that a number of the lumbermen will not get out their full stock of logs. Last week several concerns had six weeks' hauling still to do, and the prospect was that they would only have about three weeks to do it in.

Quite a number of enquiries are being received for white cedar shingles. British Columbia shingles are still in an uncertain condition although there is an indication of an improvement. The demand for hemlock is steadily improving. At Buffalo it is quite strong. In fact, the demand for all classes of lumber at Buffalo is good with the possible exception of 1-inch mill cull pine, which is somewhat sluggish. It is expected that the spring trade in northern New York will be excellent and that a lot of box lumber will be required. Supplies of mill culls are quite abnormal, although the price is still low. It is thought that two or three months of good trade in boxes might bring about a scarcity of dry mill culls.

Many large enquiries are being received by Ontario manufactlrers from firms in the northern States. One firm reports an enquiry for all their lath and also for 30 cars of hemlock. Enquiries have also been received for other large shipments, for instance, 3,000,000 hemlock lath, 1,000,000 cull hardwood and several millions of mill culls. At this season of the year such large enquiries indicate a busy season ahead.

The demand for white pine dead culls at Ottawa is extremely brisk and a large block has been sold at $12 per thousand. Mill culls are, on the other hand, weaker, as farmers are making use of dead culls where formerly they used the mill culls. The price of dead culls is ranging from $11 to $13 at the mill, and mill culls are being quoted at $17 to $18 to the wholesalers. The upper grades of white pine continue in excellent demand. There is not a very heavy movement of lumber at present, however, but inquiries are quite numerous. The market for lath continues firm. No. 1 white pine are being quoted as high as $4 for the 1910 cut. Shipments of 1909 lath have been very heavy. In shingles there is a strong demand for XX pine and cedar and the upper grades are also holding their own.

Eastern Canada

More than two complete weeks were lost in New Brunswick by the interruption of logging operations which resulted from the mild weather, and beyond a doubt this will have an important effect upon the cut of the coming season. The St. John mills, with two exceptions, are still idle and the prospects for an early resumption of sawing operations are rather poor.

The trade indications point to some improvement in the demand for American deals and plank and better prices are expected, though at this season very little business is being done. Prices for long lumber for the American market are firm. The Boston and New York demand for lath cargoes is more active. There is a fairly active movement of spruce lath. St. John stocks shrank considerably during February. Prices are steady, and the indications are that if a change occurs it will be in the direction of an advance. Stocks of lath at St. John total about four and a half millions and quotations on the dutiable article are from $2.80 to $2.90 per thousand on the wharf at St. John. Cedar shingles remain quiet with prices unchanged. Stocks of high grade shingles are only moderate, amounting to about two and one-half million "Extras" and one and one-half million "Clears," for which the quotations are about $2.60 to $2.70 for "Extras" and $2.10 to $2.20 for dutiable "Clears" f.o.b. steamer St. John.

There has been some improvement during the last fortnight in the spruce market at Boston, and in some cases higher prices are being asked by the manufacturers. Some orders have been taken at an advance of 50 cents a thousand. The general price for frames is $23, and some manufacturers are asking $25.50. It is generally believed that spruce will harden. Yard orders have recently been taken at $22.50. Matched boards are firm though the demand is not really active. Random is quiet at New York but the spruce market is firm and a number of enquiries are already in the market for early spring vessel shipments. The demand for shingles at Boston is quiet, as it is believed that prices are too high. Some Canadian manufacturers are asking $3.50 for the best cedar extras but buyers are not willing to go over $3.40 in most cases. There is a feeling, however, that the market will be firmer with the opening of spring trade. Lath are dull, the prices asked being generally $3.75 to $3.90 for 1⅝-inch and $3.45 to $3.50 for 1½-inch.

Western Canada

The lumber business in British Columbia is brighter than it has been for the past two years. Several orders running into the millions of feet have had to be refused within the past fortnight owing to inability to supply. The difficulty is that logs are abnormally high. Last summer a number of the smaller logging camps had to shut down owing to the poor demand for the logs, and the bad weather has prevented their starting up during the winter. This has caused a scarcity and the prices have soared. With the advent of spring new camps will be opened up and the prices will again become normal. Shingles have not picked up much. There are a great many enquiries for timber, few purchases having been made this year so far. A number of parties are investigating available limits, but the majority will wait for spring before sending in their cruisers.

Great Britain

Quiet still prevails in the lumber market of London, although the amount of business being transacted is fairly good and merchants are rather cheerful regarding enquiries. The amount of actual transactions is also encouraging. Prices for good stock are firm and no one appears to be overloaded with stock. No large new purchases are occurring, but merchants are steadily improving their stocks with a view to future improvement in business. At Churchill & Sim's recent auction sale, prime unsorted Oregon 6-inch and 4-inch was sold cheaply at 1s. 6d. and 1s. 5½d. 3x11 brought only 1s. 4d. Unsorted Quebec 3x7 was sold at £8 15s.; 3rds brought £8 10s., and 4ths £8. 2nd Quebec birch was sold at 1s. ½d. At Liverpool the revival in trade is quite encouraging. Spruce values remain firm. The imports are confined to liner shipments, which were a little heavier during January than in January, 1909. The deliveries are satisfactory and stocks at Liverpool and Manchester are moderate. The position of pine at Liverpool continues as firm as ever and the advanced prices asked by leading people are firmly maintained. The lower grades, perhaps, are a trifle easier.

At Manchester the business of late has been rather quiet but is moving along steadily in the right direction. Enquiries are coming in more freely. Pine sidings are unusually firm. Spruce, which is in good demand, is also very firm, the bulk of the stock being held in few hands.

Your Spring Requirements

We would like to quote you on yard stock or to submit you figures on special bills. We have long made a specialty of cutting special bills to order and have this down to a science. If you want work of this kind properly executed, try us.

We can furnish anything you need in White Pine, Norway or Fir—any length from ten feet to sixty feet.

Cleveland-Sarnia Saw Mills Co., Limited

SARNIA, ONTARIO

As far as deliveries are concerned, sawn pitch pine logs are moving freely. Spruce and Baltic white wood are also being delivered extensively. An improvement is looked for in exports almost immediately, a number of liners being due, according to latest advices.

The lumber market at Glasgow has not presented any feature of importance during the last week or two. Transactions are fairly numerous but not of large dimensions and the prevailing tone is quite satisfactory. The February business was not quite so brisk as January. Prices on spruce deals are showing a tendency to stiffen, but have not really made any advance. The winter liner shipments from St. John have been sold at prices which were current several months ago. There has been some contracting business in Quebec spruce for summer delivery and prices are reported to be high. The same applies to pine goods. There is very little buying of pine goods from stock at present, principally because there is nothing attractive left to sell. Quebec red pine deals have been in fairly good demand but the supplies are small. Prices for red pine deals for summer shiment are higher than they have been for a couple of years, but very little contracting business has yet been reported. Birch, both in logs and planks, are in good demand and early shipments will probably be easy to sell.

United States.

The prospects for an excellent building season in the summer of 1910 are already causing activity among the retail lumber dealers. Throughout the winter the general demand for lumber has been good and there is a promise in the early spring of a rapid movement of lumber. At Chicago the prices for all northern pine stock are firm and although the trade is not extensive many orders are being placed for No. 2 and better. The lower grade is moving slowly but the situation is considered to be in strong hands. At Buffalo there is a good demand for white pine, especially for the high grades, and in some cases prices have advanced. Low grade pine is also improving, but stocks are extensive. New York wholesalers report increased inquiries for northern pine, but orders are light and the general disposition is to hold them until spring.

There is a fair demand at Chicago for hemlock and the outlook for spring trade is good, the expectation being that prices will advance. The same is true of the hemlock trade at Buffalo and at Boston. Throughout the winter the sales of hemlock at Buffalo have been good. At Neew York there is a fairly active market for hemlock, the demand being particularly strong for the long lengths. Boards, however, are a trifle weak. The market for fir, spruce and cedar at Chicago is brisk and healthy. Enquiries are numerous and the outlook is encouraging. Prices are firm and steady with an upward tendency. Business, however, has not opened up on a normal spring basis as yet. At Buffalo there is a good demand for nearly all kinds of Pacific coast woods. The demand for red cedar, shingles and siding is fairly good.

There is no improvement to note in the southern pine situation in Chicago. No. 1 and No. 2 dimension and small timbers are selling fairly well. Considerable improvement is looked for in the spring. The hardwood situation is gradually improving at Chicago, where dealers say it is easy to sell lumber if they have the right kind. Hard maple is improving and birch is quite active At New York, hardwoods are selling well and stocks are somewhat low. The hardwood trade at Buffalo is also good. Quartered oak is so high that plain oak and other woods are taking its place. Sap birch stocks are very low and the demand is strong. Lumber and basswood also are scarce. There is not much improvement in shingles at Chicago, but the spring trade is expected to improve matters.

Good Demand for Dead Culls at Ottawa

Ottawa, Feb. 23.—The largest or second largest cut of white pine dead culls of the Ottawa valley has been sold at $12 per thousand. Last year the price was $11. Middlemen, discussing this transaction, regard it as a good omen for trade in the lowest grade of white pine. It is not expected, however, that all mills will receive as good a price for their dead culls, especially those which grade very low. February witnessed a considerable boom in dead cull business. All this stock remaining over from 1908 and 1909 is now in the hands of a very small number, and with bright prospects ahead for selling on the Canadian market, there is no probability of a relaxation in prices. The manufacturers' quotations range from $11 to $13 at the mill, but some producers whose grade has not the highest reputation, may sell at a lower figure or else pay the cost of transportation to the place of consumption. The improving market for dead culls is at the expense of mill culls. Ottawa middlemen who cater to the local country trade find that farmers are using dead culls almost exclusively where they used to buy mill culls. Since the price of mill culls went up to $17 or $18 to the wholesaler, quotations for the consumer advanced to what appeared to many prohibitive prices. In fact mill culls have been accumulating in the Ottawa valley yards since 1907 and 1908 and some holders of the stock are now considering selling off at cost price, with a resolution to be more cautious in 1910 buying. Most dealers are able to offer lots of mill culls at cut rates while nearly all the dead culls are in the hands of a small number

The buoyant condition of the market for upper grades of white pine shows no sign of change Reports of general prosperity in Canada and the United States encourage Ottawa valley manufacturers to look for a busy season.

One of the reasons for the strengthening of prices for high quality of lumber is the expanding market for Ottawa valley producers. It is noted that a larger proportion of the output will be shipped to such distant points as Detroit, Buffalo and Ohio markets than in former years. The readiness of American purchasers to close contracts shows that little fear is felt on the other side that the maximum tariff clause will be enforced against Canada.

The movement of lumber is quiet at present, though orders and enquiries are much more numerous than a year ago. Wherever possible buyers will wait until navigation opens before asking delivery. The Ottawa valley was seriously affected by the increase imposed by the railways in their revised tariff, which is still awaiting adjustment by the Railway Commission.

Retailers claim that they are not deriving any benefit from the stiffer market for lath. Some manufacturers are asking $4 per thousand for No. 1 white pine lath for 1910 cut, although the same quality bought cheaper last year is being retailed at that figure. The general scarcity of lath, however, suggests higher prices for local consumers before long. While the cut of lath was very large in 1909, the shipments have been very heavy. The especially fine winter favored building operations to such an extent that many structures were rushed through to completion and are now being lathed. Middlemen report an advance of 30 to 40 per cent. in sales of lath compared with a year ago. In shingles the best demand is for XX variety of pine and cedar, but the upper qualities are holding their own.

Shanty operations, though not suspended to any great extent in any locality, are being hindered by the mild weather. The E. B. Eddy Company was obliged to use summer roads for delivering provisions to its camps, but was not seriously affected in hauling logs. J. R. Booth was compelled to abandon many of the old routes over swamps and rivers, which never froze solid enough to carry teams. The snowfall was heavy on the Madawaska river and, in fact, lack of snow was not complained of anywhere in the forests, though precipitation was light in other parts of the province. J. R. Booth has brought the usual quantity of logs by rail to his mill pond to be sawed next summer.

Mr. Booth's new cardboard mill, erected during the last two years at a cost of $235,000, started operations last week. The mill has a capacity of 40 tons a day and contains four beater engines, three refining engines, and a paper board machine. The plant is run by the new power house, capable of developing 9,000 horse power. The completion of the power house also means the inaugurating of a series of platform lighting around the lumber mill.

Unfavorable Logging Conditions in New Brunswick

St. John, N.B., Feb. 21.—The present month has been a remarkable one in the history of the lumber industry as far as logging conditions are concerned. Beginning with mild weather and very little snow, the temperature rose and the weather continued spring-like until the ground was entirely bare and all traces of winter had disappeared. Lumber operators, owners of portable mills and all those who had lumber or logs to haul, were in sore straits For more than two weeks logging operations were practically at a standstill. All the logs chopped during the winter were lying on the yards anr could not be moved.

These conditions existed for upwards of two weeks, which period was practically an entire loss to the loggers. For the past ten days conditions have improved greatly because of several falls of snow and the work is being rushed with all possible speed.

On the whole, the logging season of 1909-1910 has so far been a very unfavorable one, and it is a certainty that the lumber manufacturers of this province will be far short of the quantity of both spruce and cedar logs upon which they figured when making their estimates last fall. December was a very unfavorable month, especially during the first three weeks, and the conditions which existed during the first half of the present month have tended still farther to cut down the results of the winter's work. Work in the woods has been very expensive and the logs will cost more at the mills than has been the case for several seasons.

In local manufacturing circles there seems to be little promise of activity in the near future. Two mills only are running, as has been the case since December. In only a few cases has there been a beginning made on the repairs to and overhauling of the plants, which indicates an early resumption of sawing operations.

The local prospects for trade in American deals and plank seem to point to more briskness and better prices, although at this season little the prospects of business during the coming spring and summer. Local the prospects of business during the coming sprang and summer. Local people who saw for the American long lumber market state that prices are firmer and the demand is brisker for both Boston and New York cargoes, and that the prospects in that direction are of the brightest.

Trading in spruce lath is fairly lively and quite as much so as is usual in February. There have been some heavy shipments of spruce lath during the month and local stocks are shrinking with considerable rapid-

EASTERN, Canadian Northern Building	H. A. ROSE

ity. Prices of spruce lath are steady and, locally, at any rate, are fully holding their own. It is generally felt by local people that the next change will not be a shrinkage in price, but that it is very apt to be in the other direction, although there is always an element of uncertainty in regard to lath which makes prophesy a difficult matter. At the same time business in lath is very quiet and it is felt that there must be a decided change in this respect before local prices will show any tendency to climb.

Local holdings of lath total to between four and one-half millions and five millions. An enquirer would be quoted on dutiable lath from $2.80 to $2.90 per thousand on the wharf at St. John.

The trade in cedar shingles continues without feature of note or moment. Prices remain in a groove and little change is looked for until the beginning of the spring weather, when this line of goods may always be counted upon to move more briskly.

Local stocks of high grade shingles are by no means heavy. Two and one-half millions of "Extras" and one and one-half millions of "Clears" would be the correct figures to cover all in sight at local yards. The present local value of dutiable "Extras" is from $2.60 to $2.70 per thousand, and of dutiable "Clears" $2.10 to $2.20, f.o.b. schooner at St. John.

A Quiet Period in Montreal Lumber Trade

Montreal, Feb. 24.—The lumber trade is passing through a period of quietness at the present time and very little movement is reported in lumber circles. Dealers are looking forward with every confidence to a good spring trade and are preparing their plans accordingly.

The earlier reports received from the architects' offices showed that building operations would be extensive during the coming season, in the Montreal district. The outlook now is even more hopeful than anticipated. Architects generally have on hand a great amount of work and in some instances the designing offices have had to refuse work. February is usually a quiet month with lumber dealers, but the showing so far has been apparently up to the average, and there is every prospect that the spring trade with the builders will be excellent.

Lath continue in good demand and considerable trading in all grades is reported. It is stated on good authority that lath have been shipped into Ottawa from Hawkesbury. This would indicate the great scarcity of this article that exists at present, as the Hawkesbury lath are not the usual length used in the Ottawa district.

Spruce continues buoyant and the demand for both merchantable and mill cull grades is improving. Pine, both in merchantable and mill culls, is gradually improving, and quite a large number of sales are reported. "O" culls, on the other hand, are the weak feature of the pine market.

Miscellaneous News from Quebec Province

Mr. B. C. Howard, of Quebec, it is stated, will build a pulp mill at St. George de Beauce, Que.

Mr. Henry Dorion has been appointed Provincial Crown Timber Agent, to succeed the late Mr. Clement.

The planing mill and residence of Mr. Treffle Bergeron, were recently destroyed by fire at Murray Bay, Que. The planing mill machinery, dry kiln and several thousand feet of lumber were destroyed, and the total loss, estimated at $70,000, was wholly uninsured. It is expected that the mill will be rebuilt at once

Reports from Quebec state that the Chaudiere Improvement Company have recently completed the purchase of about 130,000 cords of pulpwood. The prices said to have been paid are $5.25 per cord for rough wood and $7.25 for hand-peeled, f.o.b. Chaudiere. The deal was completed through the Quebec & St. Maurice Industrial Company.

The new dressing mill which Mr. Wilfrid Talbot is constructing in Outremont, is nearing completion, and it is expected that it will be in operation by the first of April. Messrs. Ross & Greig, of Montreal, have installed a 100 h.p. Wheelock engine and two 75 h.p. return tubular, Goldie & McCullough boilers; also pumps for fire and boiler feed purposes.

Messrs. J. & W. Duncan report that logging operations in the vicinity of their mill at Sixteen Island lake are being carried out under very favorable weather conditions, and already they have three quarters of their logs out of the bush. This firm are rapidly shifting their Montreal headquarters to the yard at 1833 Ontario street east, which they recently purchased from Mr. A. Viens.

The formation of a branch of the Retail Merchants' Association of Canada, to look after the interests of the retail lumber merchants of Montreal, is being discussed. The branch of this association which exists in Toronto has succeeded in working out a number of reforms for the protection of the retail lumber trade, and there is every reason to believe that by the establishment of a branch in this city similar improvements could be made to the existing conditions.

The annual meeting of the Tourville Lumber Company was held at the head office in Montreal on Feb. 8th, when the following officers were elected: President, Rudolphe Tourville, Montreal; Vice-President and General Manager, Edward Ouellette, M.P.P., Montreal; Secretary-Treasurer, Arthur Tourville; Directors: Joseph Lamothe, Montreal, and J. L. Rush, Whitehall, N.Y. The reports received of the company's business during the past year were very satisfactory and an excellent season in the lumber business is anticipated. Practically all their season's cut has been disposed of, the contract for their pine deals which go to a Montreal firm, having been signed a few days ago. Weather conditions in the district where their mill is situated have been very favorable for logging operations.

Lieut. J. B. Miller, the C. L. A.'s New President

Lieut.-Col. John Bellamy Miller, president of the Parry Sound Lumber Company, who was elected president of the Canadian Lumbermen's Association at the annual meeting in Ottawa on Feb. 1, occupies a very important position in the development of the timber and iron resources of Ontario. In addition to being president of the Parry Sound Lumber Company, he is largely interested in the Polson Iron Works of Toronto, of which he is the president.

Mr. Miller was born at the village of Athens, Leeds County, Ont., on July 26th, 1862, his father being Superintendent of Woods and Forests in the Government of the Province of Ontario from 1869 to 1871, and subsequently a mill owner, lumber merchant and M.P.P. for Muskoka from 1878 to 1883. He is a descendant of United Empire Loyalists on both his father's and his mother's side.

Mr. Miller was educated at the model school and Upper Canada College, Toronto, and entered the service of his father in the lumber business. Upon the death of his father in 1884, he succeeded him as president of the company. Besides his many business affairs, Mr. Miller takes an active interest in military and social affairs. For some time he was a member of the Queen's Own Rifles, in which he held the rank of captain, and is now Lieut.-Colonel of the 23rd Regt. of Northern Pioneers, with headquarters at Parry Sound, which regiment he was largely instrumental in raising some seven years ago. He is a member of the National, Ontario, the Granite, the Ontario Jockey, and the Royal Canadian Yacht Clubs, as well as a member of the Toronto Board of Trade.

Dwight J. Turner, one of the C. L. A.'s New Directors

Mr. Dwight J. Turner, of the Turner Lumber Co., Toronto, is well known to the lumber trade in Canada as one of the most active and successful men in the lumber business. He started in 1900 at Midland with the Turner Lumber Company, of which his father was president. After the death of his father he became president in 1905. The Turner Lumber Company was organized in 1900 by Mr. Turner's father, who had been in the lumber business all his life. Mr. Dwight J. Turner learned the lumber business at Bay City, Mich., in the various mills and lumber yards with which his father was connected. In addition to being connected with the Turner Lumber Company, Mr. Turner has been for several years and still is a director of the French River Boom Company, the Sauble & Spanish River Boom & Slide Company, and the Vermilion Improvement Company. He has also been for a number of years a director in the Lumber Insurance Company of New York, a licensed company doing business in Canada.

Some three or four years ago Mr. Turner took charge, as chairman, of the committee appointed to look after gathering lost logs on the Georgian Bay. This committee is known as the Log Picking Association and it has had an extremely successful career. At the annual meeting, held in Toronto recently, Mr. Turner in his financial statement showed that he had saved out of the lost property no less than $53,000 in three years. These logs are turned into lumber for the joint account of those interested.

Mr. Turner is a member of the transportation committee of the National Wholesale Lumbermen's Association of the United States. He has taken a great interest in the forestry school of the University of Toronto and gives lectures there every winter to the students. He makes practical use of the forestry school by having the students do all his estimating and cruising and make all the maps for use on his limits So great a faith has he in the work of these students that he employs them every summer in this work.

Mr. Turner was born in Bay City, Mich., in 1876. He graduated from the University of Michigan in 1898, taking the degree of LL.B. Although he was born in the United States and educated there, he has made Canada his home. He takes a keen interest in sports, being one of the most active supporters of the Ontario Hockey Association, of which for some time he has been president, and he takes just pride in the fact that the association is one o fthe best run amateur organizations in Canada. Mr. Turner is also a member of the National Club at Toronto, of the Royal Canadian Yacht Club, and of the Lambton Golf & Country Club. He also is a member of the Zeta Psi Fraternity, which he joined at the University of Michigan and which has two very strong chapters in Canada, at McGill and Toronto Universities.

Mr. Turner was elected as one of the new directors of the Canadian Lumbermen's Association at the recent annual meeting, and his services upon the board will doubtless be of great assistance in connection with the many problems which will come up from time to time.

The Shimer Cutter Heads

A Permanent Investment

No one knows how long a Shimer Cutter Head will last, because some of the first Heads made are still rendering good service, and barring accidents will last indefinitely.

These popular tools have been made continuously for nearly forty years and have been growing stronger and better as each new pattern has been evolved. Made from the best of Steel Forgings, and strengthened in design and make-up there is practically no limit to the life or usefulness of the latest patterns.

They make a permanent investment, in which only the cutters form an expense item for wear, and they wear well—work well, proving themselves to be actual time-savers, lumber-savers and labor-savers.

If our catalogue has been mislaid send for another and start the season with the Shimer System—a system that will help your mill to earn dividends.

Our Filing Stand & Tracker

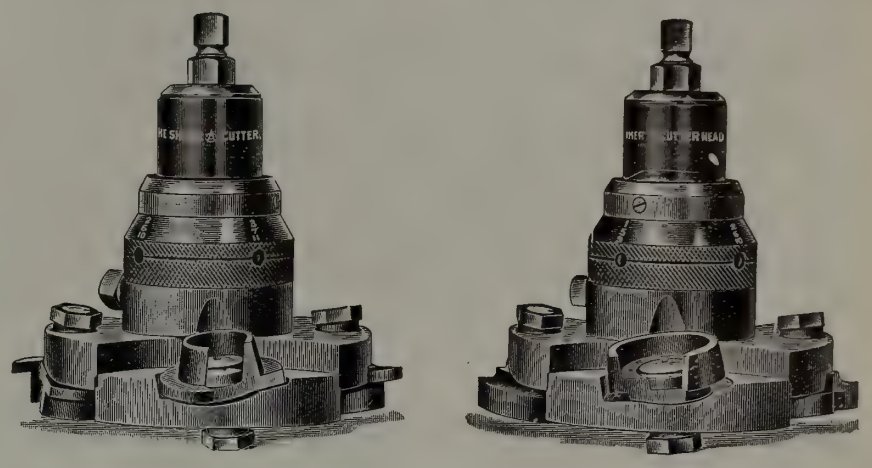
Is an inexpensive, but very useful little device with which to hold the Shimer Cutter Heads when sharpening.

It will hold any head for fitting, filing or setting the knives. It is especially fitted with a tracker attachment to set the knives in perfect cutting line, and for accuracy cannot be surpassed.

Plain Filing Stand	$4.87
Filing Stand and Tracking Attachment	$11.37
Extra Stubs	1.00

When ordering give the record number you find stamped on the Heads you have.

Don't Burn Your Moulding



Blackened edges so often found in hardwood Mouldings indicate the use of inferior tools, which friction and burn because of their failure to have proper clearance. The Shimer Reversible and Non-Reversible Cutters are made of the finest tool steel by experienced workmen. In design and construction they are superior to anything on the market. They cut well and retain their shape until worn out. Send us drawings or wood samples for estimates on special cutters. Many useful designs, with prices, are given in our catalogue.

Interchangeable Matcher and Ship Lap Heads

A Cutter Head that is either a matcher or Ship-Lap Head, according to the kind of bits placed upon it. Each kind of bit has its seat on the head which thus does double duty. Works as well for Flooring as for Ship-Lap. A convenience and saving to the man who wishes one pair of heads to serve the purpose of two.

Price, set of two Heads complete with Matcher Bits, $32.24. Ship-Lap Bits, extra, $11.96.

Thin Steel Knives

Advanced ideas referring to the planing and surfacing of lumber have developed into the use of the thin blades, made from high speed steel, which when properly tempered and treated, serve for one or two days of work on hard maple, oak or hickory.

These blades are known as our Bedee Knives and are recommended by users as the best that can be procured. For the benefit of those desiring to use this style of a knife we have facilities to furnish them in any length or thickness.

Write us about your requirements.

The Shimer Shear-Cutting Cylinder

Made to fit any Planing and Matching Machine, Saves Power, Material and Labor, besides putting a smooth surface on the lumber. The cut is made with first one knife shearing the chip in one direction across the face of the board, and is followed by the next knife which shears the chip in the opposite direction. This distribution of the work reduces jars on the machine and belts, gives smooth action, and results in better work.

Rosette Cutter Head

Our new Head and other tools for the purpose of making Rosettes should interest you if you do any work in this line. The Head is made with interchangeable milled Bits and turns any substantial wood turning lathe into a Rosette Making Machine with large capacity. Corner and Plynth Blocks with turned Rosettes are always in good style for interior house finish and are quickly and neatly made with this new Head.

Price, Head complete, $11.75.

Box Board Matcher Heads

The Shimer Cutter Heads for Box Board Matching will make a uniform cut and a close fit in every instance, as well after years of use as when the Bits are new. There is no friction upon the Bits, therefore no loss of power, no waste of material. The Bits can be expanded for thicker material, with corresponding change in the thickness of the tongue and groove.

Price for two Cutter Heads with 4 Bits each complete to match ⅜ to ½ inch, $29.15.

We also furnish when desired a Yoke Mandrel with self-oiling boxes, boxed f.o.b. Milton, Pa., for $11.05.

Following are a few Net Prices of Tools which will be made after your measurements and guaranteed to fit your machine and to match your samples.

MATCHER HEADS—"Best of All."

Figs. 22 and 23 with concave bit seats, without Bits	$24.30
Figs. 202 and 203, with Expansion, $2.60 extra each Head having 4 bit seats.	
Bits for Ceiling, the set of 8	$10.40
Bits for Flooring, the set of 8	11.44
Bits for 2 inch Plank, the set of 8	13.04

SHIP LAP HEADS.

Fig, 38 and 39, 4 bit seats to each	
Figs. 54 and 55, 4 bit seats, each	$20.80
Additional bit seats and bolts, only 65 cents extra each.	
Bits for jointing, 4	5.20
Bits for Rabbeting, 4	6.76

JOINTER HEADS.

Figs. 54 and 55, 4 bits each	$20.80
Additional bit seats with bolts, only 65 cents each.	
Jointer Bits 1¼ in. wide, each	1.30
Jointer Bits, 2 in. wide, each	1.56

DOUBLE CEILING HEADS.

These tools double the capacity of a matcher in working ceiling.	
Price, 2 Heads with 4 bit seats each	$24.30
Price, Bits extra, 8	16,64

PLAIN MATCHER HEADS.

The original design of the Shimer Matcher Heads, Figs. 1 and 2, solid flange, without bits	$16.00
With Expansion, each Head extra	2.60
Bits for Ceiling, the set of 8	9.88
Bits for Flooring, the set of 8	10.00
Bits for 2 in. Plank, the set of 8	10.00

DOOR HEADS.

Fig. 82, solid flange	$10.75
Fig. 84, with Expansion	13,35
Bits to work 1 in. to 1¼ Doors (4)	7.28

DOOR COPE HEADS.

Fig. 83, upper and lower copes to fit any tenoner (set 2 Heads)	$12.90
Bits extra, 4	5.72

SASH HEADS.

Fig. 86, solid flange	$ 9.75
Fig, 206, with Expansion	12.35
Bits extra to work 1 to 1¼ in. Sash (2 Moulded Bits, $4.30; 2 Rabbeting Bits, $2.86)	7.16

SASH COPE HEADS.

Fig. 87, to fit lower cope spindle.	$ 6.45
Bits extra, 2	2.86

EDGINGS

Ontario

A. T. Short, Limited, Cobalt, Ont., lumber dealer, is reported to have assigned.

The Pembroke Lumber Company, which recently installed some new and up-to-date machinery, now have a gang of forty men employed.

The Dominion Power & Transmission Company, Limited, has placed an order for 30 cars of cedar ties with the Long Lumber Company.

The Shepard & Morse Lumber Company, Ottawa, are installing two double cut band mills in preparation for enlarged operations next summer.

J. H. Comlins, of Ottawa, reports that there is a serious shortage of men at present, for the lumber camps operated by himself and his brother along the C.P.R. He states that the camps could easily employ between 100 and 200 men.

Berth No. 139, owned by the Victoria Harbor Lumber Company, Victoria Harbor, Ont., has been sold to the Cutler Bay Lumber Company for about $325,000. The limit is 36 square miles in extent and is tributary to the Serpent river.

Hon. J. S. Duff, Minister of Agriculture, was waited upon recently by a deputation which asked the Government to take steps to reforest about 14,000 acres of waste land in the county of Durham. The deputation pointed out that the waste lands in the northern portion of the county were once covered with trees, which had all disappeared. The soil is loose and sandy, and the winds are blowing it about, and spoiling the good agricultural land.

The Ontario Department of Lands and Mines has issued a new map showing the timber plan of the townships in the Temagami forest reserve in the Nipissing District. The area shown on the map comprises 16 townships, which were surveyed by Herbert J. Beatty, of Egansville, in 1909. Much information pertaining to the timber of the several townships is given on the map, and it should prove of value to those interested in this section of the province.

The timber license for the limit on the Township of Carscaden in the District of Algoma, Ont., has been sold by the Turner Lumber Company, of Toronto, to Cochran & Shields, of Sudbury, Ont., for about $315,000. The license covers 36 square miles and is estimated to contain over 60,000,000 feet of choice virgin white pine. The timber is tributary to the Spanish river. The purchasers will probably take out board timber and logs during the coming summer.

Robert D. Stewart, of Guelph, Ont., has had plans prepared for the erection of a two-storey planing mill, 60x250 feet, at Welland, Ont. The cost of equipment and erection of the mill will be about $50,000. About 75 men will be employed. Each machine will be equipped with a separate dynamo. Besides doors and sashes and the rougher materials for houses and factories, special attention will be given to the finer indoor trimmings, and the western trade will be looked after generally.

A Thessalon, Ont., report says that it is feared that some of the lumber companies will be unable to get their logs out of the bush before spring. The snow coming before heavy frost set in prevented the small lakes from making thick ice, and the low grounds from solidifying, making it difficult to secure firm roads for hauling; hundreds of thousands of logs are still on the skidways awaiting the opportunity to get them to the dumps on the rivers. One or two of the companies took in steam haulers and have been unable to use them. The Thessalon Lumber Company, however, hope to get practically all of this season's cut into position for the spring drive. Much will depend on the weather conditions during March. The company have now over 400,000 logs cut.

The Petawawa hotel site has been bought by the Hawkesbury Lumber Company, McLaughlin Bros., of Arnprior; J. R. Booth, of Ottawa; J. W. Fraser, of Ottawa; Ritchie Bros., of Aylmer, and other firms interested in the territory which is tributary to the Petawawa river. Logs coming down that river are most easily boomed in the Ottawa just east of the mouth, and the running of logs down to this boom so interfered with the water frontage of the hotel property that frequent complaints were being made against the lumbermen. As a way out of the difficulty the whole property was taken over by the interested lumbermen jointly, the deal being effected on their part through Mr. Harry Smith(who for the past eight or ten years has had the contract for booming all the logs coming down the Petawawa river.

Eastern Provinces

The business formerly carried on by, and under the name of R. H. Fletcher, at Sherbrooke, Que., has been acquired by the Fletcher Pulp & Lumber Company, Limited.

Negotiations are reported to be under way for the purchase by an English syndicate, of the Wm. Richards Company's milling properties, timber limits, etc., at Campbellton, N.B.

J. A. Bothwell, formerly manager of the Quebec & St. Maurice Industrial Company, and now manager of the Brompton Pulp & Paper Company, has, in association with F. N. McCrew, B. C. Howard and E. W. Tobin, purchased the interests of the Etchemin Lumber Company.

Recent Dominion incorporations include the Riordon Paper Company, Limited, Montreal, Que., capital, $6,000,000; Gordon Walters MacDougall, K.C., L. Macfarlane and C. A. Pope, all of Montreal. The Metal-bound Box Company of Canada, Limited, Montreal, Que., capital, $700,000; incorporators, C. G. R. McMichael and R. O. McMurty, advocates, both of Montreal.

Mr. S. Cole, of Nantel and Morrison, Que., is rebuilding his mill at Morrison, Que., and expects to have it finished by April 15th. He is putting in band saws, in place of circular, and is also installing one 8-foot double cut, and one 6-foot double cut, with steam piston feed, with edger, slasher and trimmers. He intends to have the new mill thoroughly up to date.

The sawmill at Masson, Que., owned by the McDonald Bros., has been sold to the W. S. Kelly Lumber Company, of Buckingham, Que. The mill has been shut down for the past few years, owing to the owner's timber limit being exhausted. The new company will employ from 60 to 100 men all the year round. Improvements are being made and the mill will open in the spring.

The planing mill and residence of Treffle Bergeron, at Murray Bay, Que., were destroyed by fire on Feb. 20. The fire is supposed to have started in the

roof of the living room from an overheated chimney and was soon communicated to the planing mill below. The building and contents, including household goods, planing mill machinery, dry kiln and several thousand feet of lumber, were a total loss, estimated at about $70,000, with no insurance. The mill and residence will be rebuilt at once.

Reports are to hand concerning large sales of pulpwood to the Quebec & St. Maurice Industrial Company, as representatives of the Chaudiere Improvement Company. The negotiations, which involve a total of about 130,000 cords of wood, are being carried through by the Chaudiere Improvement Company, in which B. C. Howard, the Chaudiere Lumber Company, Silsby Lumber Company, and the Beauce Pulp & Lumber Company are interested. The prices named are said to be $5.25 per cord for rough wood and $7.25 for hand-peeled wood, f.o.b. Chaudiere. Whether this deal will affect B. C. Howard's proposed plan to build a pulp mill at St. George de Beauce is, it is understood, not settled at present.

Mr. A. E. Hamilton, whose large woodworking factory at St. John, N.B., was recently burned, is making good progress with the work of rebuilding. About forty men are at work, and Mr. Hamilton claims that he will be ready to do business early in March. The new mill will be larger than the old one, the main building being 80 x 100 feet and two storeys in height. The dry kiln will be 55 x 42 feet. Mr. Hamilton intends to put his business into a stock company with a capital stock of $75,000, of which $25,000 is to be preferred and the remaining $50,000 common stock. Twenty thousand dollars of the preferred stock is to be sold in St. John, and among those who have already purchased are T. H. Estabrooks, Thomas Nagle, W. B. Tennant, J. Willard Smith, W. E. Earle and J. M. Queen.

Western Canada

Dunn Bros., builders' supplies, Winnipeg, Man., have dissolved.

The Independent Shingle Company, Limited, New Westminster, B.C., have sold out.

W. L. Martin, lumber dealer, Wapella, Sask., has been succeeded by the Corona Lumber Company.

It is reported that McKenzie & Mann may erect a sawmill at Stewart, B.C., in order to secure railway ties.

Chas. W. Steele, lumber merchant, Bethune, Sask., has sold his business to the Beaver Lumber Company, Limited.

Alexander McRae, of Revelstoke, has sold nineteen timber limits in the Big Bend and Arrow Lakes districts. Kootenay, for $86,000 cash.

Louis Blue and P. S. Deschamps, sawmill owners of Rossland, B.C., have dissolved partnership, and the latter has taken over the business.

The B. C. Gazette gives notice of the incorporation of the following companies: National Paper Mills, Limited, capital $250,000; Pioneer Lumber Company, Limited, capital $75,000.

The Sturgeon Lake Lumber Company, Sturgeon Lake, Sask., will move their mill to a point two miles up from the mouth of the Red river. A. J. Bell is in charge of arrangements.

John Hanbury, of Brandon, who has mills at Cranbrook and Elko, and whose mill in Vancouver was burned down two years ago, will proceed with the construction of his mill on False Creek. The cost will be $125,000.

The plant and site of the Independent Shingle Company, New Westminster, B.C., have been sold to a local purchaser for a consideration in the neighborhood of $45,000. The site is an ideal one, having transportation by two railways and several hundred feet frontage on the north arm of the Fraser river.

The Fort George Lumber & Navigation Company, which started with the Nechaco last year, is putting two new steamers on the northern inland waters this spring. The head office of the Fort George Lumber & Navigation Company has been opened in Vancouver and there will also be agencies in Ashcroft and Fort George.

The steamer Otter recently took from Swanson Bay, B.C., 250 tons of pulp produced by the new mills. This is the largest shipment of pulp ever sent out by the mills yet. 150 tons were taken out about the same time by another vessel. This pulp is being sold in Washington and California and is said to be superior to the Scandinavian product with which it competes.

The Prince Albert Lumber Company, Prince Albert, Sask., are changing the arrangements of the boom at the mill. In place of the three piers in use at present, one pier will be used and piles will be used in place of the piers. By the proposed changes, the boom will be narrowed and there will be a wider channel for boats. There will also be less risk of logs getting away.

The Dominion Forestry Department is taking measures to prevent forest fires along the routes of the Canadian Northern Railway in Alberta, and along the great waterways north as far as Fort McMurray. The increasing arrivals of homeseekers and prospectors in the country is considered to threaten serious fires, and fire patrol parties will be sent out to guard against them.

Messrs. J. O. Searn and C. W. Frees, of Vancouver, are opening an office in the Exchange Building, Hastings street, under the name of the Hearn-Frees Company. Both gentlemen have been practically reared in the timber business. Mr. Hearn is now on a trip to the east with a view to opening branches of their business in the principal cities of the Dominion. On his return to Vancouver he will leave almost immediately for Australia for the purpose of promoting the lumber interests of British Columbia in that commonwealth.

A Vancouver despatch announces that the various mills embraced in the B. C. Lumber & Shingle Manufacturers' Limited, with possibly one exception, have completed the organization of a selling agency to act as brokers. Ivan D. Smith, formerly purchasing agent for Mason & Gordon, of Montreal, has been placed in charge. The effect of the new arrangement has been the retirement of a score or more of travelling representatives of the various mills. A number ber of them, however, have been transferred to the service of the new agency, and will act in a similar capacity. The new move will probably have the effect of driving local brokers out of business.

At the annual meeting of shareholders of the British Canadian Wood Pulp & Paper Company, held recently at Vancouver, Mr. Greely Kolts, who organized the company, and who has acted in the capacity of fiscal agent since its inception, recommended an immediate issue of debentures so as to enable the company to develop water power, to erect an eight-grinder pulp mill, and to install an additional paper machine with a capacity of 35 to 40 tons of news print per day. At present the company are confined to the manufacture of No. 1 and No. 2 manilla, drab and colored fibre, drug and laundry paper. Mr. Kolts pointed out that the demand for news was so great that no delay should be made by the company in getting into this important and profitable line.

BERLIN MACHINE WORKS, LTD. - Hamilton, Canada

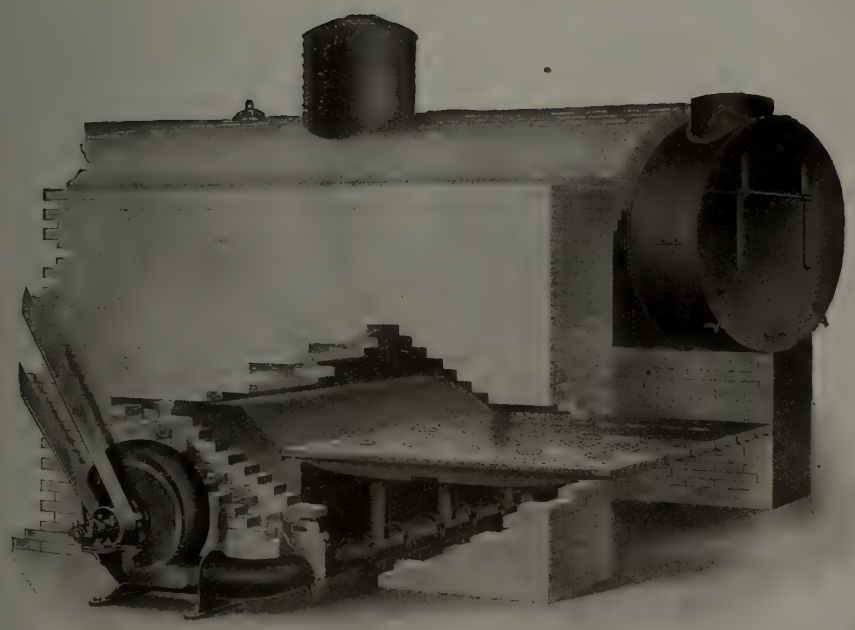
Results Are What Count

A Combined Skidding and Loading Machine that will clear up the largest area at a setting and can be moved and set up ready for business in the shortest possible time will get the best results. The latest Russel machine has some distinct improvements that save time and trouble, consequently money. Note the new method of suspending skidding sheaves, they are hung from a vertically hinged jib or triangle, the outer end of which is guyed by two lines one on each side, which are power-tightened and can be set while skidding lines are going out. The guy lines lead back so they do not interfere with skidding or loading.

The uppermost leg of this jib has a spring connection to the tower that reduces shocks.

All strains due to skidding are absorbed by the guy lines. The swinging boom is operated by wire ropes passing through sheaves suspended from a steel frame projecting from tower and leading to two drums on loading engine, controlled by one lever. Machine is raised or lowered by hydraulic or patented geared jacks. Built for 2 or 4 lines, with stiff or swinging boom, constructed entirely of steel, except loading boom.

This machine is without question the strongest and fastest machine of the day.



RUSSEL WHEEL & FOUNDRY CO., Detroit, Mich., U. S. A.

Are Your Boilers Overloaded?

If so, your cut is not what it should be

What Disposition are You Making of Your Sawdust, etc.?

Why don't you run your mill with it?

Are You Burning Your Slabs, etc.?

Why not sell them instead?

The old reliable Gordon Hollow Blast Grate increases the efficiency of a boiler 25% to 50%; gives as good or better results with wet, green or frozen sawdust as a draft grate gives with dry wood; saves labor in firing; and is practically indestructible.

Sold on Approval. Thirty days' trial given. We pay the freight both ways, if rejected.

Adapted for either sawdust or slabs, for plain furnaces or Dutch ovens, and for any number of boilers, from one up.

No change in construction required.

Easy to install.

Can be fired on when the boiler is idle.

We will submit a proposal upon receipt of the following data:

How many boilers have you?

Have you furnaces or ovens?

What are the width and length of your grate surface or surfaces?

THERE is no machine that is more profitable around your plant than a first-class freight elevator. It makes space in the upper floors just as valuable as space on the ground floor, and solves the perplexing problems, which constantly arise, where there is no elevator installed.

We manufacture freight elevators of every description and of all capacities, and we guarantee our elevators to be better than anything on the Canadian market.

We are an independent Company and sell our elevators at independent prices, and this accounts for our rapidly increasing business and pleased customers.

If you have not room enough in your factory for an elevator, ask us to submit plans for placing one on the outside of the building.

This Saw Stands Without a Rival

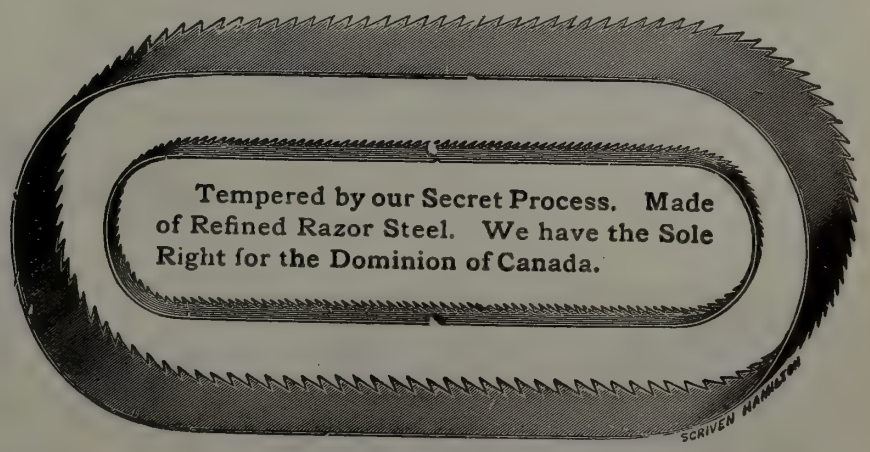
AND IS THE

FASTEST CUTTING SAW IN THE WORLD!

Its Superiority consists in its Excellent Temper. It is made of "Razor Steel," which is the finest ever used in the manufacture of Saws. We have the sole control of this steel. It is tempered by our secret process, which process gives a keener cutting edge and a toughness to the steel which no other process can approach.

Maple Leaf Saw Set

MANUFACTURED BY

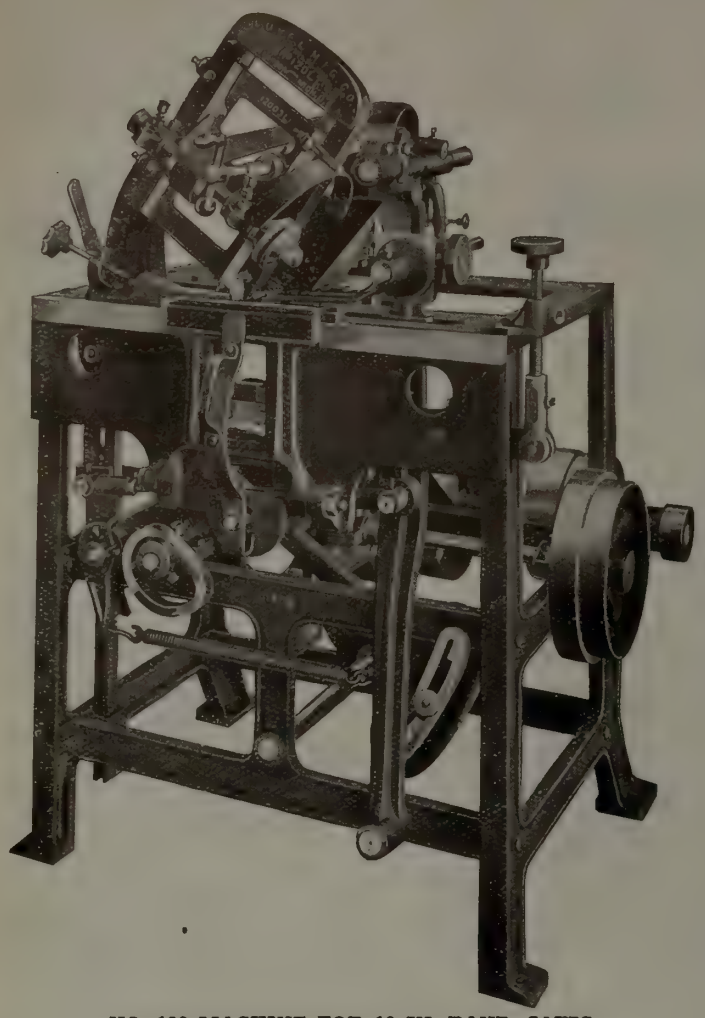


SHURLY & DIETRICH, Galt, Ont

Directions.—Place the set on the point of tooth, as shown in the accompanying cut, and strike a very light blow with a tack hammer. If you require more set, file the tooth with more bevel.

If you follow directions you cannot make a mistake. Be sure and not strike too hard a blow, and it will set the hardest saw. **On receipt of 40 cents we will send one by mail.**

We are the only manufacturers in the world who export Saws in large quantities to the United States.



We Manufacture

HIGH GRADE BAND SAWS

Of All Widths and Lengths.

These Saws are made of Refined Razor Steel, and tempered by our Secret Process; for Fine Finish and Temper are not excelled.

NO. 120 MACHINE FOR 10 IN. BAND SAWS.

SAW MACHINERY

The Most Efficient Band Saw Sharpener Made

Equipped with **new automatic idler** bracket keeping the belt to the emery wheel at the same tension as it travels up and down. Idler pulley is located on slack side of the belt and can be adjusted in line with the emery wheel. Belt is held to same tension at all times by a large spring. There are **no flange pulleys** used on this machine, with the use of automatic idler the life of the belts is prolonged. **Head** is constructed with 60 degree angle shaped slides on both sides so that **wear can be taken up by adjusting one gib.** Every wheel arbor can be adjusted so that a straight wheel will do the same work as a concaved one. Head is adjusted to a 45 degree hook.

Saw rest is moved up and down by hand wheel at the right hand side of the machine, convenient for the operator. Adjusting screw is so placed that it **cannot become covered with emery dust.** The saw rest is made of self hardening steel and can be easily replaced. **Back feed** is of a new design and is strong, simple and effective. The adjustable eccentric cam on the cam shaft is connected to the long back feed shaft by means of a lever, this lever rocks the back feed shaft that moves the back feed arm. Back feed finger can be turned out of the way and allow saw to be lifted up without interfering, machine is equipped with an **adjustable cam.**

To those interested in the highest type of machinery of this kind we invite your inquiries and ask permission to send detail description.

We Make All Kinds of Machinery and Tools for the Care of Saws

"Hanchett" Circular Swage Shaper

A very useful tool in every filing room is the "Hanchett" Circular Swage Shaper. It combines all the necessary qualities for the giving of a perfect finish to the work of the saw swage. By its use every tooth is pressed into perfect shape, as in a mold widest on face, widest at extreme points, tapering downward from the points and backward from the face. In this manner a perfect shape and a perfect clearance is obtained and the shape of all the teeth is absolutely uniform.

The "Hanchett" Circular Swage Shaper is adapted for side dressing log, shingle and small circular saws, and makes the successful cutting of good smooth lumber possible. The shaper is easily adjusted to the circular saw. When the saw swage has done its work, it is removed from the pin and the shaper is substituted. Simplicity and speed are distinctive qualities of the shaper. From 30 to 40 teeth per minute can be dressed with it.

"Hanchett" Adjustable Circular Saw Swage

That filers everywhere appreciate a good machine, has been demonstrated to us by the phenomenal success of our swages. The "Hanchett" Circular Saw Swage is easily the most desirable in the market. The special points of excellence that are combined in this machine are: Simplicity of Construction, Great Speed, Ease of operation, Perfect adjustment, Remarkable durability.

LET US SEND YOU OUR NEW CATALOGUE NO. 6. LARGE, UP-TO-DATE, INTERESTING. TELLS ALL ABOUT MODERN FILING ROOM EQUIPMENT.

Because of the trouble arising through the manufacture of imperfect parts by outside parties, we have adopted as a trade-mark the name "Hanchett," so that our customers can prevent themselves from being imposed upon by being supplied with inferior parts. and hereafter all our dies, clamp screws and anvils will be stamped with this name "Hanchett," and if any of our customers receive these parts without our name stamped upon them, they may know at once that they are not genuine, and they should be returned and the proper parts secured from us.

We absolutely guarantee our swages and all swage parts, and any part furnished by us which fails to be perfect in every respect, both in workmanship and material, will be promptly replaced by us without charge.

LONG'S SAW MILL MACHINERY

Records for Cutting Capacity unsurpassed.

4 Saw Lath Bolter

We build a full line of Lath Machinery, and will be pleased to submit full particulars on application.

This machine speaks for itself.

Improved Hot Blast Grate

This is the latest production in the line of Hot Blast Grates. With this grate the blast is evenly distributed over the whole surface of the grate so that when sawdust is being used for fuel, it requires little if any attention, as it is evenly consumed.

This is not the case with other styles of Hot Blast Grates where the blast is not evenly distributed.

Our Hot Blast Grate develops more heat from green, wet or frozen sawdust or mill refuse than an ordinary draught grate develops from wood or coal. Increases steaming power of boiler 50 per cent. It will save you money regardless of the kind of fuel.

We will ship our Hot Blast Grates to any reliable person or firm on 30 days' trial, to be returned at our expense if not as represented.

SUITABILITY

You wouldn't file a saw with a manicure set—neither would you use a hand machine to edge 8 in. and 10 in. Cants.

If you are running light stock on a heavy edger, half your machine is idling—you are wasting floor space and you are not getting full returns for your investment. On the other hand, if your machine is too light for your work—you are forced to crowd it—your saws will heat and bind and your lumber will be snaky and uneven—you suffer in both cases.

We have had 60 years' experience as Canadian Saw Mill Builders. We manufacture a complete line of Edgers—hand, light, medium and heavy style—varying in size from 30 in. to 96 in. opening. No matter what stock you are handling, we have the Edgers—in style and size—most suitable for your work. Our Bulletins on Request.

FIRE INSURANCE

REDUCED RATES

The Keystone

Pole Tram Car

Pole Tram Car.

Indispensable to every saw mill. It runs on poles from 6 to 10 inches in diameter and the wheels are concave.

This method of conveying logs, pulpwood, or coal is undoubtedly the best and the cheapest that jobbers and mill-men can use. It can be used to great advantage on low and marshy gronnd.

We would appreciate the opportunity of furnishing you with further particulars.

PETERBORO ONTARIO.

Combination Gang Edger

On this machine you can put cants up to 8 inches thick through a cluster of saws and do your edging at the same time.

It is also largely used for making flooring from small cants.

It helps you solve the small log problem.

On one side there is a battery of as many fixed saws as required, and the other side is arranged as an edger with movable and stationery saws.

Both the feed and press rolls are divided and the feed rolls on gang side can be run at any speed independently of speed of edger rolls.

There are two driven fluted feed rolls in front and two in rear of saws.

The top press roll behind saws is driven and is equipped with safety device so that lumber cannot fly back.

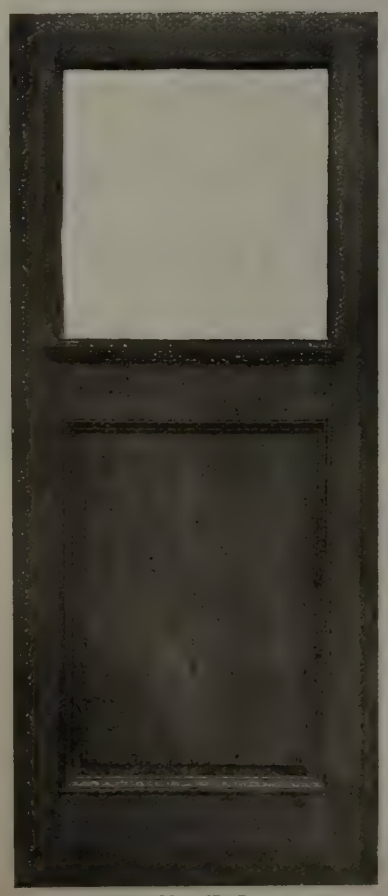
SIMONDS

Inserted Point Saws

Made in Montreal

Are you buying a new saw this winter? Then listen to what some other mill men say about the Simonds Saw. We quote from their letters. "As near perfection as one could be made for our mill." "Miles ahead of any other—would not take $100 in gold for it." "Our favorite saw in the mill." "First class, works fine." "Runs equally well winter or summer." "Your saws have proved the best I ever used." "It's the only saw I can get to stand up in frozen timber."



Some of our friends may be over enthusiastic, but there you have their own words. Isn't it enough to cause you to hesitate and learn more about the Simonds before buying any other make? Really he who uses this saw profits much more by it than do we in selling it. You have more to gain than we.

An attractive little booklet fully describing these saws can be obtained by addressing our nearest office.

TERMS OF SUBSCRIPTION:

Canada, United States and Great Britain, $2.00 per year, in advance; other foreign countries embraced in the General Postal Union, $3.00.

"Thc Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For Manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Vol. 30 Toronto, March, 15, 1910 No. 6

Tariff Matters—Negotiations Begun

Lumbermen on both sides of the international boundary are watching closely the developments at Ottawa and Washington in connection with the tariff situation. Negotiations up to date have been of the most encouraging nature and have assisted in creating a general belief that there is little likelihood of a tariff war being started. It is still necessary for Canadians, however, to stand firm and hold out for nothing short of absolute refusal to make concession to the United States in consideration of the being placed upon the minimum tariff list instead of the maximum. The Canadian Government is apparently taking a firm stand in the matter and it behooves the Canadian people to back them up in every possible manner.

The opening negotiations at Ottawa in connection with the subject were exactly what one would have expected between the representatives of two important countries. Messrs. Emery and Pepper, who have been conducting negotiations at Ottawa on behalf of the United States Government, were received with all the hospitality for which Ottawa is celebrated. They were wined and dined, and the unofficial opening negotiations taking place over an enjoyable and informal dinner. The representatives of the United States were also entertained by viceroyalty and were finally given every opportunity to make themselves conversant with the Canadian tariff situation. A number of interviews were held between them and Sir Wilfrid Laurier and Hon. W. S. Fielding, Canadian Minister of Finance. Expressions of friendliness were indulged in on both sides and the visitors were impressed with the fact that the sentiment of the Canadian people is strongly in favor of continuing the pleasant relations with the people of the United States which have prevailed of late. They also could not have failed to realize that the people of Canada, in their hearts, do not believe that the tariff concessions which have been given to France can be fairly termed "undue discrimination" against the United States. It is safe to say also, that the visitors quickly realized that the people of Canada do not consider that they have received any important favor as a result of the recent reductions in the duty upon some Canadian articles going into the United States. These reductions have been made for the benefit of the American consumer, and whatever benefit Canadians may have secured has been only a necessary result.

The visit of the United States representatives was for the purpose of investigation solely. Upon their conclusions will be based the advice which they will tender to President Taft, whose duty it will be to declare whether Canada is to enjoy the minimum tariff. It would be unwise to suppose that the mutual good-will which has prevailed at Ottawa and at Washington will, of necessity, have the result which Canadians hope for. "Pace with honor," is the desire of both countries, but there are many complicating conditions which may make trouble, and the President of the United States has a task which few will envy him. He is in an extremely delicate situation and his course is being closely studied by peoples and parties of the widest diversities of opinion. Canadians, however, have fortunately no part to play in the matter unless the result should be unpleasant to them.

The Timber Situation in B. C.

Hon. W. J. Bowser, Attorney-General of British Columbia, in his recent speech upon the budget, referred at some length to the timber and lumber situations in the province. His remarks upon these subjects which were in part as follows, will be read with interest: "Two things mainly acounted for the great depression in the lumber trade which took place in the latter part of 1907, and continced more or less during 1908 and the earlier part of 1909. One was overproduction, which recurs periodically in times of prosperity; another was the partial failure in crops in the Northwest in 1907, which- seriouly restricted a market already well supplied. Another contributing cause was the competition of the spruce mills of Northern Saskatchewan, which for the first time began to be a factor in that market, and the flooding of prairie markets from the United States. During 1907, however, the market, owing to the abounding crops on the prairies, began to improve again, and may now be described as being in a normally healthy condition, with prospects of still further improvement, dependent, of course, upon the crop returns in the Middle West. The lumber industry is peculiarly subject to ups and downs on account of variable conditions already hinted at, but in the main, for obvious reasons, the lumber output must continue to expand. and when the Panama canal is completed we may look for such an impetus as will make it easily the most profitable of our staple industries, and the government, I may say, will see to it that as profits to the lumbermen increase, the country will share proportianately in the revenues that should flow to the treasury from the splendid natural assets of our forests.

Reverting to the question of special licenses, as to the wisdom of which a variety of opinions is held, and on account of which the government's policy was serverely criticized, I may say that, we have no apologies to make. The experience as to financial results has been most gratifying, and the great bulk of the evidence given before the Forestry commission goes to show that the policy is a wise one, the best, in the circumstances, that could be adopted. It is true, that under the temporary excitment of speculation, the system, until restricted by reserve of timber, was overdone; but it cannot be shown even at that, that the country has been the loser, rather has it been very considerably the gainer. It is a mistaken idea that because timber has been alienated by license it is lost to the province. and this is where our opponents have been weak in their criticisms. In the ordinary way, the timber is not cut until it is required for legitimate commercial purposes. In the meantime the treasury is receiving a splendid revenue from license fees. which otherwise it would not get at all. When the timber is cut the Government receives a substantial return from royalties, which it has the power to increase, and which will increase as the profits to the lumbermen increase. Even in regard to the excessive alienation complained of, in the excitement of timber prospectors to get claims, a good deal of land was staked, some of which may have been worthless, and a good deal is of a character that would not have been staked by bona fide

cruisers, and the Government reaped, and is still reaping, large revenues from such lands. I do not say that it is in the best interests of the country that such land should be staked merely to sell, and that is one of the reasons why we stopped it, but I refer to it to point out that financially the country lost none of its assets as a consequence, but, on the other hand, made money by it.

"I am not going to refer at length to the general timber policy of the Government. That matter is in the hands of the forestry commission, and we shall have, I hope, a complete and luminous report presented to us before the next session of the legislature upon which to base a permanent and comprehensive code governing every phase of the forestry question. In the meantime, the chief commissioner of lands, acting upon an interim report of the forestry commission, decided to recommend to the Government the making of the tenure of the special licenses perpetual or for as long a period as there is timber to cut. The evidence given before the commission, by independent as well as by interested parties, was practically unanimous on that point as in the interests of the conservation of the timber ,and we now look forward to that co-operation between the holders of timber and the Government as shall greatly tend to the objects we have in view—the best possible results to be obtained from a scientific husbanding of an asset that we hope to make perpetual. The fact that the holders of licenses will be entitled to renew from time to time until the timber has been taken off the land will offer no inducement to the licensee to slash or slaughter the trees in order to make the most of it during a restricted term of 21 years. The longer he holds it and pays license fees the greater will be his desire to protect the timber and to co-operate with the Government in all measures for the conservation and reproduction of trees on forest areas. By the amendment to the Land Act brought down by the chief commissioner the perpetuity of title in these special licenses is subject to terms and conditions, that may from time to time be imposed by order-in-council, particularly with reference to rentals and royalties, and the right has been taken by the Government to take back all areas suitable for agricultural purposes and fit for settlement It will be seen, therefore, that the interests of the public have been protected in every way possible, and that so long as these timber licenses are held the public will reap a revenue proportionate to the profits reaped by the lumbermen. I cannot at present anticipate the report of the forestry commission, but we hope as the result of its recommendations that the whole subject will be so dealt with that a very complete and comprehensive code of forest regulations will be put into effect, and that we shall have a forestry bureau established that in its scope and general character will, in conformity with the policy of this Government in regard to all its departments, be thoroughly modern and progressive in methods.

"The industry last year, as I have already stated, was prosperous. The output of lumber for the whole of the province was, for the coast 450,000,000 feet, and for the Mountain mills 325,000,000 feet, or a total of 755,000,000 feet, valued at $12,000,000; approximating the figures for 1907, the banner year for British Columbia, viz., 846,000,000 feet, and 100,000,000 feet in excess of 1908. At the present time the outlook is so favorable as to anticipate that the production of lumber for 1910 will exceed that of any previous year in the history of Brtiish Columbia."

Pulpwood Export—An Inexcusable Waste of Raw Material

The export of pulp wood from New Brunswick, it is to be hoped, will be definitely prohibited by the Legislature in the near future. The Government have intimated their intention of taking such steps, and it is to be hoped they will carry it out at the earliest possible opportunity. The securing of large tracts of pulp wood property in Canada by foreign companies who export the raw material, has become a serious matter. In New Brunswick, during recent years, the International Pulp & Paper Company have secured a number of important properties, including those of the W. Richards, E. Hutchinson and the Dalhousie Lumber Companies. These properties comprise a large number of square miles and, with the exception of the W. Richards Company, are all Crown lands, on which there is stumpage of $1.25 per M. feet and an annual mileage of $8 per square mile. The company have erected some modern plants for cutting and rossing the wood, after which it is exported by steamers to Portland, Me., whence it is taken to the company's mills, which are situated several miles inland.

This is a state of affairs which in the first place should never have been allowed to develop. The pulp wood resources of Canada are much too valuable to allow them to be indiscriminately exploited for the benefit of a foreign people. The value of pulp wood is increasing rapidly with the demand for raw material for paper-making and with the rapidly decreasing supply. It will be necessary, therefore, for the provinces of Canada and for the Dominion to watch their pulp wood resources with a jealous eye, never permitting anyone to cut, when such cutting involves an injury to the reproducing power of the timber stands. It is little wonder that the people of Eastern Canada are keenly anxious about their pulp wood resources and that they are backing up their Governments' efforts towards prohibiting the export of the raw material.

The situation is briefly summed up by a correspondent of the "Canada Lumberman" in the following words: "It seems a pity that this wood is going from the province in practically a raw state, as, if it were manufactured here, it would give employment to a large number of men. Our New Brunswick Government have been considering the question of increasing the stumpage on wood exported in this way, but as yet nothing has been done. Under the present tenure, the Crown licenses here have still eight or nine years to run, and at the expiration of that time the Government will have to decide whether the lands shall be put up to public competition as heretofore, or whether they should have them thoroughly cruised, and give the present lessees (who have invested largely in plant, etc.), the chance of buying at the Government valuation."

Burning the Slashings—Ontario Operators will Investigate

There is a disposition among the owners of timber limits in Ontario, to adopt a system of burning slashings in connection with their logging operations, in order to reduce the danger from fires. This question arises perennially and has frequently been discussed in a theoretical fashion without definite results. The reason for this is not far to seek. Lumbermen are not inclined to take steps to burn their slashings unless a general movement in this direction is taken. Individual efforts can be of no value and any money spent individually would be wasted. The logger might burn all his slashings and yet be in almost as much danger from fire as he was before, because on the adjoining limit the slashings might be left in the woods and cause a fire which would destroy his timber. In order to make it worth while for any timber owner to burn his slashings all other owners must take a similar step. The case is essentially one for Government action. If a law were passed making it compulsory to burn slashings during operations, there is no question that the effect would be a great reduction in the annual loss from fire, at a cost which would be infinitesimal in comparison with the fire loss.

Investigations have been made of late in the United States which lead to an almost certain conclusion that the plan is not only feasible but advisable. Experiments recently made on the Cass Lake Indian reservation in Minesota brought out results which were in the nature of a revolution to many lumbermen. One large company made a contract for the piling and burning of its slashings at the rate of 18 cents per M. feet of logs. They found out later, however, that they could do the work cheaper, and did so at a cost ranging from 15 to 30 cents per M. feet. The timber was white and Norway pine. Another company burned the slashing on its private holding for 15 to 50 cents per M. feet, the variation depending upon the amount of hardwood that it was necessary to cut in making roads. Another company gave evidence to the effect that the piling and burning of slashings could be done at 18 to 35 cents per M. feet, and another company did the work at 50 cents per M. feet. In the Minnesota national forest, one-half white pine and one-half Norway, the burning of slashings costs nothing because it clears the ground and makes it easier to skid the logs. On this contract 5,000,000 feet of logs were put in last winter at a cost of 22 cents per M. feet.

One operator on the Cass Lake reservation burned his slashings as

he cut his timber, figuring the cost at 20 cents per M. feet. In a rough winter the cost would have been 35 cents per M. feet. Another operator testified that he burned slashings at a cost of 17 cents per M. feet, and he said that he would make a contract to burn slashings at 25 cents per M. feet of logs cut ,and would burn the heavy hardwood slashings at 50 cents per M. feet.

From the evidence that has been obtained it is apparent that it would be necessary to give the loggers considerable latitude in the application of a law to make burning of slashings compulsory, on account of the variations in conditions in different localities at different times of the year. Prevention of forest fires is one of the most important factors in connection with the value of timber holdings. If a feasible method can be devised without prohibitive cost it will be a great boon to timber holders and it is of much interest, therefore, to learn that some of the large operators in Ontario are taking the matter up seriously. If their investigation proves that the plan is feasible—as it seems certain that it will—the Government should be able to see their way clear to make a practical test of the scheme.

Editorial Short Lengths for Busy Readers

Sir Lomer Gouin, Premier of Quebec, has added to the satisfaction of those who object to the export of pulp wood, by a definite statement that, "The pulp wood cut from the Crown lands will not be allowed to leave the country in any cruder form than pulp." By manufacturing the pulp in Canada, instead of sending the wood abroad to be manufactured, Canadian industry will be extensively benefited. The benefit would be still greater and just as reasonable if the Government went still another step further, and allowed only the manufactured paper to be exported.

A well known firm of lumber manufacturers in Nova Scotia, referring to the duty upon lumber going into the United States, write to the "Canada Lumberman" as follows: "The particular feature of general importance to the lumber trade at the present time, in which many provincial shippers are interested, is the attitude to be taken by the American Government in regard to the imposition of the maximum duty and the effect it would have upon trade in this province. While we do not consider the American markets of especial importance in view of certain contracts that have been made for deliveries during the coming season at American points, it would materially affect the merchants if the maximum duty were to be imposed."

Lumber grading is a matter in which there are few lumbermen who cannot still learn something to their advantage. Absolute honesty in grading is something which is hard to define, but it is certain that the nearer one comes to it the greater will be his profits. There are some dealers who think it is good business to grade their lumber in such a manner as to get rid of their off-grade stock to the very best advantage. The lesson of experience, however, will be that the man who makes the most of his off-grade stock is the man who always makes a point of putting a doubtful piece in the grade below. The reason for this is a simple piece of logic which often escapes the notice of the man with a grasping disposition who thinks that the secret of success is in always getting for his goods a little more than they are really worth. The retail dealer who does not go over his stock and try to advance it all a grade will have the least trouble with his customers and will probably make money while his competitors are having a hard time to make ends meet.

Washington reports state that since the reduction in the tariff on lumber, only a small increase has occurred in the imports of Canadian lumber. "There is a lesson in the report of the Department of Commerce and Labor for those who urged the repeal of the lumber tariff with such great frenzy," says a United States exchange. "Developments have shown that a slight increase in the movement of lumber across the Canadian border has resulted from a reduction in the duty. The imports will never be great enough to affect lumber values materially. The output of the Canadian mills is estimated at somewhere between 3,000,000,000 and 4,000,000,000 feet. The product of mills of the United States ranges from 35,000,000,000 to 40,000,000,000 feet, and it is impossible for the smaller quantities completely to regulate the value of the larger. At the same time, the removal of the duty or its material reduction enables Canadian manufacturers, located on the lakes or having access to water or cheap rail transportation, to dump their low grade products into this country and further congest the markets."

Apparently the pulp resolution which was carried by the Canadian Forestry Association at its recent convention in Fredericton had its fangs drawn before passage. In its final form it is little more than a declaration that the time has come when something should be done to limit the cutting of lumber and pulpwood on Crown lands. Everyone knows already that this time has arrived and it would have been more in accord with a truly economic sentiment to pass a resolution calling for active measures to prevent the export of pulpwood in its unmanufactured state. It is reported that the mild nature of the resolution is a concession to the feelings of those who are afraid of the result upon their trade with the United States. It is a pity that the feelings of a few should be allowed to override the interests of a large body, at a time when the matter at issue is one of the utmost importance to the whole country. By permitting its deliberations to miscarry in this manner the Forestry Association leave themselves open to the criticism of failing to serve the true interests of the people whom they are expected to represent.

"With the opening of tariff negotiations with Canada this week there is naturally considerable speculation as to what the outcome will be, especially so because of the rather firm attitude on the question already taken by the Canadian press. Just now the newspapers in the Dominion are loudly maintaining that there is no undue discrimination against the United States in their tariff arrangements. In taking this stand the newspapers are backing up the attitude of the Laurier Government. We may therefore expect to see many arguments advanced within the next few weeks that the treaty with France contains nothing that can be held to be an undue discrimination against the goods of the United States. Just how this can be explained away we dare not venture to surmise, still we feel safe in predicting that Canada's French treaty will be shown to be due and not undue discrimination. "Because of the necessity on both sides for an amicable adjustment of differences, it is hoped that a settlement of these differences will be speedily arrived at, and that the hatchet that is now flourishing will be buried as effectively as it has been in the case of Germany "—The "Paper Trade Journal."

While strikes are in the air it is interesting to consider the strike of the shingle weavers which recently took place on Gray's Harbor, Wash. When the increased duty upon Canadian shingles entering the United States was imposed, it became possible for the shingle manufacturers of Washington to consider improving the quality of their product, and they decided to do so. Then the shingle weavers found a grievance which in these days when the chief characteristic of business is improvement of methods, is rather astonishing. The weavers claimed that under the new rules they were unable to make as much money as formerly, when the slipshod methods of cutting and packing prevailed. While this statement might be true, it was a strange illustration of the weakness of the position of the strikers. They were apparently unwilling to forego a temporary advantage and could not see that if they allowed the manufacturers to turn out a better article than formerly, their own position would, in the end, be to that extent improved. The benefit is certain to be reflected upon the employees in a short time, if they co-operate with the employers. The strike shows an entire lack of mutuality of interest existing between the employees and the manufacturers, and is a striking instance of that lack of foresight which has done so much to interfere with the successful working out of the principles which have led to the development of trade unionism. There could of necessity be only one solution to the strike. It was contrary to the genius of modern business principles and could not succeed.

The Forester's Value to the Lumberman

Valuable Work done on an Ontario Company's Limits—Mapping and Locating Information — Interesting Description of the Work—By Dr. B. E. Fernow

Can foresters be of use to lumbermen? This question is often asked, and by those least competent answered in the negative. It seems most difficult to make people realize that a forester is in reality nothing less (although he is something more) than a lumberman, whose business is to secure revenue from the forest. The only difference between the two is that the lumberman, as a rule, exploits his timberland wastefully, takes out what he thinks will pay him now, and leaves the property in poor condition — often, with the help of fire, a ruin—while the forester has the obligation to avoid waste and, as far as possible, to leave the property in a producing condition for the future. The lumberman works only for the present, figures only for the short run; the forester calculates on the long run. How far he may be able to live up to these obligations, how far he will allow the interests of the future to influence his practice in the present will depend on economic conditions surrounding each property. He will at least try to proceed in an orderly, systematic manner; he will try to avoid waste and to secure closer ultilization, which appears a small matter, but in the aggregate produces tangible results; and he will leave or attempt to leave the woods in better shape for the future.

Section of a Map Prepared by Forestry Students.

Here is where the "practical" man puts in his spoke. According to him, the education which a young man gets at the forest school is of no use. He knows only one kind of education himself, namely, the slow toilsome, uphill and narrow road of experience which he has travelled. the most costly because slow; making him efficient, to be sure, for the narrow sphere in which he has worked, if he be of the right stuff, but not as efficient or as widely efficient as he might have been had he had better chances.

As there are many roads to Rome, so there are many ways to secure an education. These practical men make the mistake in supposing that the young man coming from a professional school is, or at least thinks he is, educated for the business .and may, therefore, at once assume or attempt to assume a managership. Would you want a young medic just from school to operate on your appendix? Would you engage a graduate issuing from the engineering courses to build the Quebec bridge? Do these men, indeed, think they are fit to undertake such tasks, or do they not go out engaging in subordinate positions to gather experience first? Just as an engineering school does not turn out engineers, or a medical school physicians, but only men who are prepared to become engineers and physicians, so a forest school cannot expect to do more than prepare men to become foresters; experience, judgment, practical knowledge come only from practice and are to be learned in practice. But the man who has the mental training which a course in a university gives, or cught to give, should be able—if he is otherwise of the right kind—to secure this practical knowledge in a short time when the opportunity comes; and then his training will also tell in that he will be able to see and devise new ways, where the so-called practical man, who is lacking in the theory which leads to new practice, would continue in his old routine.

If we merely state what the finished forester is to know, perhaps the lumberman may see that eventually such a man must be useful in the woods.

Let me quote my own words as to what is finally expected of a forester:

"He must. of course, know his trees, where and how they grow, their life history, and how much they produce. He must be able to survey, to describe, to measure and to estimate timber. He must know the character and use of wood and by-products in the various industries He must be a consummate logger; he must know what the saw miller can produce from his logs, what the manufacturer does with his products. He must know how to market it, and be familiar with transportation problems. He must know more than his own narrow world in respect to forest products and their supplies. He must understand the relationship of matters which may influence the future for he must be a seer into the future for which he works. He must know how to handle men. Most important of all he must know how to reproduce his crop in better condition than he found nature's crop, and this knowledge is the most difficult to attain, and calls for superior judgment, for it is not merely by planting, but by managing the cutting, the harvesting of the old crop, that this must be done. He must know how to protect his crop against damage by fire, insects, fungi, frost and drouth, and how to advance it in growth. Lastly, he must be a financier, for the ultimate object of his business, like that of any business, is the earning of a revenue; hence his operations must be shown to produce a profit. Since the longtime element in the production of the forest crop defers the harvest to a period which is so distant as to change all economic conditions, he is confronted with a compound interest calculation, requiring a great deal of judgment in the choice of the factors to be used."

Of course, the young student just studying or even when leaving college knows of these things, but does not master them until he has had experience Yet, there are some things he can be employed on with confidence, just as the engineer student may do certain classes of work satisfactorily.

Mapping out an Ontario Timber Limit

The proof of the pudding is in the eating! What have forestry students done in the employ of lumbermen? Two summers ago, Mr. Turner, president of the Turner Lumber Company, employed three of them, then in their junior year, as fire patrols and incidentally to send in information regarding his limits. He found the information so usefel that he discontinued their employment as fire patrols and let them devote all their time to mapping and locating information regarding his limits. In his letter after the work was finished, he stated:

"We do not believe that we could hire a timber cruiser or an engineer in Canada who could get up a map as valuable to use for the purpose for which it will be used.. We sincerely hope that next summer you will be able to recommend to us students from your department who can do similar work for us on this township and on others, as we are anxious to have all our holdings examined and maps made of them in the same accurate and intelligent manner as the work performed by ————."

Better than words of praise, the same company did call for another party of three men the following summer—three juniors. This is what they did:

For the purpose of securing information and details for a map, the country was travelled systematically by the familiar method of the timber estimator, viz., running, by means of compass and pacing, parallel lines, whose ends were accurately located on the blazed lines of the original township surveys. This was considered the most convenient method of looking over the whole area, and, at the same time, locating with a fair amount of accuracy topographic and other features of the country. A sketch map was drawn in the field of the country traversed while running the line, and in camp, a continuous map was constructed by combining the information secured on the different lines. The final map combined a sketch of topographic features, a description of the character of the ground and forest growth, and information designed to assist in logging operations. In order to show clearly these details, the map was

drawn to a scale of eight inches to the mile—four times as large as the printed township maps.

The skeleton of the map was formed by the outlines of lakes, swamps, and the courses of streams. On the remaining land surface, the hills, slopes, and valleys were indicated in such a way as to give a picture of the actual lay-out of the ground. Directly on the map were printed brief phrases indicating the composition of the forest, the occurrence of important kinds of trees, especially pines, and the relative abundance of hardwoods and softwoods. The condition of the woods was also mentioned with regard to previous lumbering and merchantable condition of the trees. The character of the ground was noted, especially one district, which was near a settlement, the areas fit for farming were located, and for each lot, the percentage of its area of that character was determined. From this varied information, tables were made showing for each lot: first, the percentage of rocky country, farmland, swamp and water; and, again, the percentage of virgin, partially lumbered, heavily lumbered, and burned woodland.

Practical Information Secured

Of interest in connection with active lumbering there were indicated on the map the position of existing log roads, tote roads, camps, dams and other river improvements, etc. In the virgin areas the location of these same features as proposed for future operations was depicted. The watersheds, which were already indicated by the topography shown on the map, were drawn distinctly in order to block off the areas from which the timber would haul in one direction. On each of these areas the main hauling routes were approximately located, showing the necessary length of haul and the general plan which the work of cutting, skidding, and hauling would have to follow The location of proposed new camps and tote roads was also shown. Such maps can be made for from $10 to $25, according to conditions.

In virgin pine woods, the merchantable timber was estimated at the same time as the surveying was done. The basis for the estimate was the measurement of diameters of all merchantable trees on sample areas comprising 5 per cent. of the total area. In this method, which is specially developed by foresters, a more or less accurate examination of a definite area sufficiently large and well distributed to give a correct and reliable average of the whole area is substituted for the judgment formed from general observation of the country travelled, which estimators use to a large extent, and which is only valuable when done by a man who has had long experience in the particular region. The sample areas were located along the compass lines, either in the form of a narrow strip the full length of the line or of quarter acre plots at different points. Variations in height, defects, crookedness, etc., were duly allowed for when encountered in trees. A table showing the average number of board feet in trees of different diameters was constructed from careful measurements of felled or wind-blown trees. This gave the information necessary to compute the actual amount of timber on the sample areas. Then the timbered area in each lot was determined from the results of the survey, and by the use of the samples, the total amount of timber on each lot was obtained. The amount in each logging block was separately computed to show the amount to come over each of the main hauling roads. The timber killed by a recent fire was also separately determined.

To represent the distribution of the timber more graphically than in the tables summarizing the exact results of the estimates, water colors were used on the map to show the amount of timber on different areas. Different shades of green represent stands averaging less than 2,000 feet per acre, 2,000 to 5,000 feet, 5,000 to 10,000 feet, and over 10,000 feet. This added the final touch to the map.

The Value of a Detailed Timber Map

The design of such a map has in view its use by the owner or manager of the limit, to give him right in his office at a glance, as much information as could be given on paper, about his forest holdings. It is to assist him in directing his business and the operations in the woods with as much intelligence as possible, by representing to him this information, to obtain which he could not travel the ground in detail himself.

It is clear that such a map, a sample portion of which is given herewith, must afford the owner a much more definite understanding of the reports brought to him by his employees of operations in the woods. The map by indicating the distribution of the timber and the direction of hauling routes, would show plainly the reasons for locating camps and tote roads in certain places, and would allow the owner to form an opinion of the wisdom of his foremen's choices. The calculation of the probable cost of operations would be assisted as the average length of haul and other factors could be determined readily from the map.

It should be borne in mind in considering this particular piece of work that it was done with certain ends in view, and that the method and scope of the work could be readily altered to meet new conditions of locality, time, and expense, or to satisfy different demands on the part of the lumberman. This accentuates the advantage of having a work of this kind done by men with forestry training, whose education aims to give a broader outlook and greater adaptability to new methods by a comparative study of methods followed in different regions. The lumberman, therefore, has in the trained foresters a class of men who can respond to a call to meet new needs arising in his business .

Incidentally, during the work on the Turner Lumber Company's limits, an estimate of the waste of high stumps was made, based upon the measurements of 4,356 trees on 390 quarter-acre sample plots distributed over eight square miles. At present, the stumps are made two and one-half feet and over. The amount of good lumber that is wasted by that practice was found to be, allowing 20 per cent. for butt rot, 9,278,000 feet B.M. on the whole township, over 10 per cent. of the whole cut. The extra length of the tops left in the woods, when cutting stumps lower, would be more than balanced by the larger number of top logs which would be taken out. The total saving by a change of practice, it was figured, would amount at $10 stumpage, to the tidy sum of at least $92,770—worth while looking into! This represents over $4 per acre, which could be used to burn the brush for better protection of the future and still leave a handsome profit

This is, to be sure, only one class of work. There are others in which these men, eager to learn and to show their worth, to bring intelligence into the woods, can be made useful. Sometimes this employment comes in most unexpected directions. I may be allowed to point out one, of which I have always been proud, namely, that of one of my former students, Mr. Asa S. Williams, who, graduating in 1902 from Cornell University, has just come to Canada as manager of the logging department of the Allis-Chalmers Company at Montreal, introducing the Lidgerwood steam skidders. The Lidgerwood Company was alert enough to discover that a trained forester was the best man to judge forest conditions and the suitability of their various logging apparatus to the particular case, and after only two years' experience Mr. Williams was advanced to the responsible position, and can now give points to any experienced logger.

If lumbermen would only realize that not less than 70 per cent. of their expense in producing lumber is spent in the woods, the importance of bringing this part of their business into greatest efficiency should appear.

So far the paper mill men have realized this more fully. The Riordon Paper Mills have for two seasons employed a forest engineer (a graduate from the N. Y. College of Forestry at Cornell University) with a crew of eleven men to survey and plan their woods work, and the Laurentide Paper Company have done so for three years.

Boston Market Somewhat Uncertain

The Shepard & Morse Lumber Company, Boston, Mass., report under date of March 7th as follows: "The changes in lumber prices have not been very great lately. The general trend of the market here is a little uncertain at the present time. We think things look fairly good but the drop in the stock market a little while ago set everybody to thinking and wondering what was coming, and it has made strongly for conservatism. People are not taking on large contracts ahead as they would otherwise, and general business has slackened up to some extent, still we are having a good fair lumber trade and haven't much to complain of. The only thing that seems to have shown much of any inclination to advance lately seems to have been hardwood flooring. There have been decided advances in nearly all grades of maple and birch flooring, particularly maple.

"Shingles seem to have been at their worst. We were obliged to make some quotations a little lower than before, in fact in one instance where parties pressed a car on the market to be sold we know of extras being sold as low as $3.35 Boston rate, New Brunswick shingles. Since the advance in the duty on shingles there have been more red cedars coming into this section from Washington and less from British Columbia. The advance in duty has had a very serious effect on the business in B. C. shingles here, and if things keep as they are we should judge they might be very largely shut out of this market, as the prices are higher than they are on the Washington shingles and Washington mills have gradually learned to put about as good an article on the market. Spruce plank and dimension timber is selling hard and random is lower."

White Pine Prices Advanced at Minneapolis

Minneapolis manufacturers have made a move for higher white pine prices. Changes in the price list are not considered important in respect to inch common lumber, but mainly affect inch finish, thick selects, siding, piece stuff and timbers. B select inch finish, at the advance, is quoted at $65 and $70 a thousand; inch shop common, $27; No. 1 thick shop, $48 and $50.50; B and better siding, $30, and C and better Norwal siding, $20 a thousand. In the piece stuff, or framing dimension list, the advances were: 2x4-16, $1; 2x4-20, $2; 2x8-20, $1; 2x12-18, $1; 3x12-16, $1, and 4x10 and all large timbers, $1. Eight-inch No. 3 boards were reduced 50 cents; 12-inch No. 2 boards, 14 feet long, advanced $2.50; 12-inch, No. 2 boards, 10 to 20 feet long, inclusive, advanced $1, and 12-inch No. 3, 50 cents. No. 2, 4-inch 16-foot fencing, was advanced $1; 4-inch, No. 2, 16-foot, reduced $1; 4-inch, No. 3, 10-foot and longer, advanced $1. Advances on inch finish in the several grades, including shop common, ranged from $1 a thousand in the common grades to $4.50 for B selects. Advances in third selects ranged from $1 for No. 3 to $3 for B select and better. Select common white pine piece stuff was advanced from $2 for 2x6 to $3 for 2x12.

Lumber News From Maritime Provinces

Less Cold Weather than for Sixty Winters Back — Spring Toning-up in Progress Among the Mills—St. John Shipments of Lumber—Forestry Resolutions

The unseasonable weather in the maritime provinces during the winter season which is just about over has caused a great deal of concern to the manufacturers and to the trade in general. One firm who manufacture extensively in Nova Scotia, deal with the subject in a letter to the "Canada Lumberman" as follows: "The nature of the winter, both in New Brunswick and Nova Scotia, has been such as to seriously curtail the annual cut. While the cut in Nova Scotia is, we take it, around the 500,000,000 mark, and has been that quantity for a number of years, we doubt if more than one-half that amount will be secured during the present season. Not in sixty years have we had as little cold weather and frost as during the present winter. During the latter part of January our lakes broke up after a long continued rain, and boats were plying on them carrying supplies to various points where usually supplies are conveyed by teams over ice 12 to 18 inches thick. All lowlands and swamps are impassible and only those whose timber is on high, dry ground can log to any advantage."

Trade Notes—Mill Owners Making Improvements

Messrs. C. E. Crowe and Ira S. Crowe are building a double cutting band sawmill at Brooklyn, Hants Co., N.S.

Messrs. Dickie & McGrath, of Tusket, Yarmouth Co., N.S., are building a new sawmill to replace the one lost by fire in the early part of 1909.

Clark Bros., lumber dealers, Bear River, N.S., will commence a thorough toning up of their mill during the present month and complete it early in April.

St. Croix Lumber Company, Limited, Halifax, N.S., have just completed and are now operating a ground wood pulp plant with two grinders in conjunction with their business.

Mr. John Millard, lumber manufacturer, of Liverpool, N.S., reports under recent date that there has been very little lumbering going on in his part of the province during the past winter. This is the result largely of the mild open and broken weather which has prevailed. He estimates that the cutting of timber for that district during the past winter will not exceed 60 per cent. of the average cut.

Messrs. Blackadar & Company, Meteghan Station, N.S., have bought the limits of John W. Lowe & Son, at Aylesford, N.S., which amount to about 4,000 acres. The purchase also includes a new mill. Messrs. Blackadar & Company are operating this property and it is reported that J. W. Lowe & Son, Limited, are looking at two other properties in Nova Scotia, one of which they will probably buy for immediate operations.

The Campbell Lumber Company, Limited, Weymouth Bridge, N.S., contemplate installing an electric plant at their upper site, known as Sissiboo Falls, to generate electricity for their lower pulp mill and supply light for the neighboring towns. They also intend to increase the capacity of their dams in order to give a continual flow of water during the dry season. This will enable them to increase their pulp mill, installing new machinery such as sliver screens and save-all, so as to utilize their waste completely. With this new machinery the company will have one of the most economical plants in Canada.

Mr. Geo. Rawlings, lumber manufacturer of Musquodoboit Harbor, N.S., has recently completed a number of additions and improvements to his mill. The power has been changed from water to steam. Formerly the mill was driven by two 36-inch turbine wheels. The power was so uncertain that a new 125 h.p. boiler and a 100 h.p. engine were substituted, which are now giving good satisfaction, cutting between two and three million feet per year. Mr. Rawlings has also added a new improved rotary. The other machinery includes a patent edger, two trimmers, lath machine, shingle machine, a large planer, and a moulding machine. The annual cut on the Musquodoboit river is about 10,000,000 feet of spruce, hemlock and pine, which is manufactured into deals, dimension stuff, boards, laths, shingles and planed, grooved and tongued spruce, hemlock and flooring.

Resolutions Passed at Forestry Convention

Among the resolutions passed at the recent convention of the Canadian Forestry Association were the following:

"Resolved, that the association endorses the project set forth in the report of the parliamentary committee of the House of Commons recommending that the available forest land upon the eastern slope of the Rocky Mountains be converted into a permanent reserve."

"Resolved, that in the opinion of the forestry convention the Dominion Government should pass more stringent laws to compel railway companies to take more precautions to prevent forest fires along the line of their railways, and also that the Intercolonial and the Prince Edward Island Railway should be placed in the same position as other railways and that these railways should have to conform to the fire laws of the several provinces through which they passed, and that the Intercolonial Railway and Prince Edward Island Railway should carry the fire wardens free of charge and drop them at any point where they desire."

"Resolved, that this convention urge upon the Dominion Government and the Governments of the several provinces the necessity of reserving the timber lands at the headwaters of the rivers and streams so as to maintain the regular flow of water."

A recommendation was also passed that the executive of the association should be instructed to take into consideration the appointment of a committee of five members to study the advisability of having a universal log rule for the whole Dominion.

Recent Shipments from St. John

Recent shipments by vessel from St. John, N.B., were as follows:

Vesel and Destination	Cargo
Feb. 19—Peter C Shultz, New Haven..	185,569 feet spruce deals
	450,000 spruce lath
	125,000 cedar shingles
Feb. 19—Lavonia, Las Palmas	314,628 feet pine and spruce boards
Feb. 21—Canada Cape, South Africa ...	229,895 feet spruce deals
	476,520 feet pine boards
Feb. 22—Manch'r Mariner, Manchester..	248,587 feet spruce deals
Feb. 22—Rebecca M. Walls, New York..	402,739 feet spruce boards, etc.
	83,436 feet pine plank
Feb. 23—Stella Maud, Quincy, Mass....	27,977 feet spruce boards
	1,000,000 shingles
Feb. 23—Lake Michigan	333,989 feet spruce deals
Feb. 23—Tunisian, Liverpool	327,931 feet spruce deals
Feb. 24—Salacia, Glasgow	37,867 plank
Feb. 25—Dunmore Head, Dublin	144,661 feet deals
Feb. 25—Bengore Head, Belfast	95,991 spruce deals
Mar. 1—Manch'r Importer, Manchester..	1,087,751 spruce deals
Mar. 2—Sardinian, London and Havre..	50,572 spruce deals

Query and Comment

I wish to install a band mill for sawing spruce and pine. I want to put in an 8-foot wheel with 12-inch saws, or 14-inch. What speed would you give the saw, also what pitch and what space on the teeth? What tension is best to use? Would you carry your saws straight on the back? I also want a 6-foot band resaw. What size of saws and speed would you use?

The speed of a saw for an 8-foot wheel with a 12 or 14-inch saw would be 8,000 to 10,000 feet per minute, the general practice being about 9,000 feet. The proper pitch is a matter of opinion. As to the space of the teeth, this will vary from 1½ to 2 inches, depending upon the pressure of the saw. It would be best to leave this to the mill men to determine, as they should know the requirements exactly. For cutting spruce, however, it is necessary to have a saw with a good clearance. The proper tension is also a difficult matter to determine without careful consideration of the particular circumstances. It will depend largely upon the filer and the condition in which he keeps his saws. It will also depend upon the speed. In general, however, the following directions can be depended upon: At 9,000 feet per minute a 12-inch saw, at 15 gauge, will require 6,769 pounds strain, and a 14-inch saw, 15 gauge, 7,897 pounds. At 10,000 feet, a 12-inch saw, 15 gauge, will require 7,520 pounds strain, and a 14-inch saw, 15 gauge, 8,775 pounds strain. As to the question, "would you carry your saws straight on back?" it is impossible to answer this as the question is somewhat obcure. If it refers to the advisability of using a double cutting band mill, the local conditions would govern the matter largely. In most cases, however, the double cutting mill is to be recommended on account of its greater capacity. For detailed information on this subject read the article on double cutting band mills in the "Canada Lumberman" of March 1.

In regard to the band resaw, we understand that the largest size made in Canada has a 5-foot wheel, which is considered large enough for the largest mills. The size of the saw for such a resaw is 7 inches. The speed is 500 revolutions per minute. For a 6-foot band resaw the size of the saw would be 6 inches and the wheel should be run at 425 revolutions per minute.

Mr. M. M. Stearns, of Wynyard, Sask., has sold his lumber business to the Beaver Lumber Company, and has moved to Hutchinson, Minn., to manage his father's lumber yards in that district. Mr. B. D. Branscombe is representing the Beaver Lumber Company at Wynyard.

A Uniform Log Rule for Canada

Interesting Proposal Brought Up at Forestry Convention — Inconsistencies of Present Systems

Editor "Canada Lumberman":

At the forestry convention recently held at Fredericton, some mention was made of a Canada log rule for use throughout the Dominion, but the matter was not discussed. This seemed to the writer a good suggestion, and he would be interested to know what other lumbermen think of it.

In New Brunswick, the contents of a log nine inches in diameter inside the bark at the top end is three times its length in feet, ten inches four times its length, eleven inches five times its length, twelve inches six times its length. Obviously this is not an equitable rule, as it bears too hard on the buyers of small logs, and every tree has one small log, however large the tree may be. If the difference in scale between a 12-inch log and one of 11 inches is equal to the length of the log, certainly the difference between a 10-inch log and one of 9 inches must be less.

The Quebec rule is much more favorable to the millman, and as both provinces meet in competition in the world's market, Quebec has greatly the advantage, especially when the difference in stumpage charges on Crown lands is considered.

Will you invite comment through your columns?

The Georgian Bay Canal Situation

Ottawa, March 10—The lumber interests of the Ottawa valley were especially concerned in the renewal of the appeal to the Dominion Government to do something to ensure the starting of the Georgian Bay Canal, made by the Canadian Federation of Boards of Trade and Municipalities on March 2nd. The result was what was expected. Sir Wilfrid Laurier reaffirmed the statement made by the Finance Minister recently in the House, that there was not yet enough money at the disposal of the Government to give the necessary aid to such an enterprise, on account of the large obligations involved in the construction of the Transcontinental and Hudson Bay Railways. No company would undertake the work without a Government guarantee of bonds, and this he was not prepared to sanction. "My only regret is that we cannot start to-morrow," said Sir Wilfrid, asserting his strong approval of the scheme. He added that the improvement since the last financial crisis warranted him saying that there was no reason apparent why the canal should not be soon started. Hon. Charles Murphy, Secretary of State, regarded the building of the conservation dams along the route as commencing the project. Hon. William Pugsley's view was that the portion between Ottawa and Montreal should first be built and then the stretch between French River and Lake Nipissing.

Before the deputation saw the Government, the Federation passed a resolution reaffirming its position with regard to the canal. Mr. Peter White, of Pembroke, blamed the members for not contributing more money for the purpose of educating the public to the advantages of the canal. Only a thousand dollars had been subscribed, while ten times that amount was needed. In order to raise more money the membership fees of the Federation were raised from: Municipalities and corporations, $10 to $50; Boards of Trade, $20 to $100; firms and corporations, $10 to $50; individuals, $5. Mr. Peter Whelen was re-elected president of the Federation, and Mr. Arthur J. Forward, secretary.

Insurance Bill Passed by the Senate

Ottawa, March 10—The Senate to-day passed the third reading of the insurance bill. The measure was subjected to a couple of hours discussion, but there was not a word of dissent against the amendments which relieved premium payers from the onerous 15 per cent. tax on premiums when they insure with foreign unlicensed companies. A few changes were made in the Act, but nearly all related to life insurance. The bill now goes to the House of Commons and, in the natural course of events, will be sent to the banking and commerce committee of that chamber.

Clause 139 as now amended is as follows:

"Notwithstanding anything in this Act contained, any person may insure any property situated in Canada with any British or foreign unlicensed insurance company or underwriters, and may also insure with persons who reciprocally insure for protection only and not for profit; and any property insured or to be insured under the provisions of this section may be inspected and any loss incurred in respect thereof adjusted; provided such insurance is effected outside of Canada and without any solicitation whatever, directly or indirectly, on the part of such company, underwriters or persons by which or whom the insurance is made.

2. Every person so insuring property situated in Canada shall make a return to the superintendent, giving the location and a brief description of the property insured, the amount of the insurance, and whether insured in Lloyds, or some similar association, or in mutuals, reciprocal or other class of insurers, such return to be made by delivering or mailing it in a registered letter, addressed to the superintendent not later than the first day of March in each year for the year ending on the preceding 31st day of December.

"3. Blank forms for such statements shall be supplied by the superintendent.

"4. Default in compliance with the requirements of paragraph 2 of this section by the insured shall subject him to a penalty of $10 for each day during which default continues, recoverable and applicable in the manner prescribed in sub-section 2 of section 69 of this Act."

The permission given to outside companies to send inspectors to examine properties "insured or to be insured" will be to the insurance federation in Canada the most objectionable of all the changes. They claimed before the committee that every inspector or adjuster of a foreign company was virtually an agent. Still the committee could not find a practicable way of carrying on insurance without a system of inspection, even before insurance was entered into.

Death of Mr. S. R. Higgins

Mr. Samuel Ruddell Higgins, travelling salesman for the Victoria Harbor Lumber Company, died on Tuesday, March 15th, at St. Michael's Hospital, Toronto, after a brief illness. The news of his death will be learned with much regret by many warm friends whom he had made throughout the lumber trade in Ontario. Mr. Higgins was one of the most genial characters upon the road, and his visits were looked forward to by all whom he favored with a call. He started in the lumber business with the firm of McCraney, McCool & Wilson, of Toronto. After being with them a short time, he became so conversant with the business that he was sent out on the road

Some time later Mr. Higgins joined the staff of the Victoria Harbor Company, of Toronto, and with the exception of about two years, during which time he was associated with J. G. Cane & Company, wholesale lumber dealers of Toronto, he represented the Victoria Harbor Company as their travelling sales agent. The late Mr. Higgins was a well known member of the Concatenated Order of Hoo-Hoo. He was also a prominent Mason, being a member of Zetland Lodge. The cause of death was heart failure. Mr. Higgins was 51 years of age and unmarried.

J. M. Musson, Canadian Trade Commissioner at Leeds, England, reports that, providing prices are competitive, there would appear to be an outlet in this district for the sale of vehicle wood stock of Canadian manufacture. At present some of these goods are made locally, but, at the same time, there are importations, chiefly from the United States, the trade, so far as this district is concerned, being in the hands of a few reliable merchants who would be interested to learn what Canadian manufacturers may have to offer in this direction.

It is, perhaps, hardly necessary to state that the timber should be of prime selected quality, wheel spokes being preferably in oak; rims from hickory or white oak, and the hubs either from rock elm or oak. Bent and straight shafts, poles, felloes and whole wheels are further lines, the sizes and dimensions varying in accordance with the kind of vehicle for which they may be intended.

Mr. Dwight J. Turner, of the Turner Lumber Company, Toronto, attended the convention of the National Wholesale Lumber Dealers' Association at Cincinnati on March 2nd and 3rd.

Mr. Geo. B. C. Sharp, the well known lumberman of Moose Jaw, Sask., has purchased a ranch from the chief of police of Revelstoke.

The Burrard Lumber Company, Limited, have appointed H. A. Robson chief agent in Manitoba.

The Rat Portage Lumber Company, under recent date, report that the demand for all grades of stock is increasing very rapidly and that prices are being firmly held, with a probability for increases in the near future. The indications, they say, are that this will be one of the largest, if not the largest, building years in the history of Winnipeg. Consequently the outlook is for a very large demand for lumber and correspondingly high prices.

Mr. T. F. Paterson, one of the delegates from the British Columbia coast mills to the recent convention of retailers in Winnipeg, has returned to Vancouver. In an interview referring to his trip Mr. Paterson said: "Prospects for business have, I think, never been better for western lumbermen in the prairie provinces. The meeting of the retail lumbermen was largely attended from all parts of the country. Those present were very optimistic as to the outlook for business on the prairies during the year. In fact every man is a booster; they all have the Vancouver spirit down there. The greatest development in the history of the world will, I think, take place in the prairie west during the next 15 years."

The Proper Care of Hardwood Flooring

How to Prevent Shrinkage and Swelling—Methods adopted by Leading Manufacturers—Trouble Frequently the Result of Laying in Buildings Before they are Dried

A correspondent of the "Canada Lumberman" in a recent letter asked for information regarding the proper methods of storing hardwood flooring. He stated that his firm had received complaints about their flooring, notwithstanding that it had been stocked in upper bins away from the ground and the best care taken of it. They believe that they have the best, or one of the best, lumber sheds in Ontario. Their flooring is stored on the second storey to keep it as far as possible from the ground, and notwithstanding this, after it had been in stock for a month or so and was taken to the building where it was to be laid, there was a shrinkage and consequently a great deal of trouble.

The proper method of handling hardwood flooring is a question which has occupied the thought of a great many manufacturers. The difficulty caused by shrinkage is a most troublesome one, yet it has been successfully overcome by many manufacturers. With a view to obtaining the results of practical experience letters were addressed by the "Canada Lumberman" to a number of manufacturers in Canada asking for their views upon the matter, and they are practically unanimous in stating that the only cause for shrinkage after a floor has been laid, is that the flooring has absorbed moisture while in the warehouse and possibly also in the building where it is used. One of the most frequent causes of shrinkage in flooring after it has been laid is the habit of putting flooring in a new building before it has been properly dried out. This is an evil which is entirely beyond the control of manufacturers of flooring, and which is almost certain to result in the flooring absorbing moisture from the building. At a later period, when the building is dried, the flooring will of necessity shrink. These views and a number of others which are of practical interest to all who are in the business of manufacturing hardwood flooring are expressed in the letters received by the "Canada Lumberman" upon the subject. Among the letters received were the following:

The Bryan Manufacturing Company, Limited, Collingwood, Ont.: We are not manufacturing hardwood flooring at present, therefore have not given the matter much consideration.

Of course we handle quite a lot of hardwood flooring and have had considerable experience in using it and know that any kiln dried lumber, and especially hardwood, is very susceptible to moisture and should not be put in any building until the plaster is perfectly dry. Most of our good work is smoothed up and filled before it leaves the factory, which is the only way you can ensure it not absorbing moisture and swelling. If hardwood flooring is kept on hand after it is manufactured, the building it is stored in should be heated, as this is the only way we know of that it can be kept from swelling and shrinking again after it is laid in a warm building.

John Piggott & Sons, Chatham, Ont.: It is quite easy to account for hardwood flooring shrinking after being manufactured. The air in the good shed that your subscriber speaks of must be drier than the air in the place that it came from before being manufactured. If his lumber had been properly kiln dried, instead of shrinking, he would undoubtedly have been troubled with it swelling. To keep dry material in a proper shape, it should be kept at a proper temperature, that is about the same temperature and humidity, as it may be expected to be in when used.

By properly drying and filling the pores of the wood and then putting a finish on the four surfaces, namely, both sides and the edges, thereby closing the pores of the wood, you can in a measure prevent shrinking and swelling, but even when that is done, if there is a superabundance of sap and water in the material used it will eventually shrink if kept in a dry building. I can give you an illustration: "I had a walnut chair in my house for four years, without showing any signs of shrinking. One night some person left it near a register, which started a joint in the centre of the seat. Next winter the joint opened the whole length. Watching that chair carefully, I found that in the winter season (when the air is drier than in the summer months) it shrinks, and swells again in the summer, and this varies from 1-16 to 1-8 of an inch. I have had this chair now some 25 years, and the variation still continues, although well finished and polished: it is affected by climatic changes.

I would advise your subscriber to season his hardwood flooring better than he has formerly done and keep it in a dry building, and he will find that he will be troubled a little with swelling instead of shrinking. To keep it properly he should have it in a closely covered building and kept dry and continually at about an even temperature.

A Toronto Manufacturer: It would be impossible for me to suggest anything without seeing the conditions under which your subscriber is working, also the way he handles his stock, but from what I can gather from your letter, I would say that if the lumber is thoroughly dried through to the centre (not baked in a kiln), and left ten hours after coming out of the kiln to cool off before machining, he should not have the difficulty that you speak of.

John Harrison & Sons Company, Limited, Owen Sound, Ont.: We find that hardwood flooring gives best satisfaction when taken promptly from machine to building, and also find it necessary in this territory to carry steam heat in the flooring warehouse.

There is no doubt that hardwood flooring will absorb moisture from the air unless the dampness is removed by the air being heated. The trouble referred to by your customer is no doubt caused by the fact that the flooring absorbed a certain amount of moisture while in his warehouse and probably also in the building where it was used. The absorption of this moisture will cause the lumber to swell a little and it will afterwards, when the building is heated, shrink back to its original size.

While we think hardwood flooring should be kept in a heated atmosphere until laid, there is no doubt but that hardwood flooring and finish is being taken into new buildings before the buildings are thoroughly dried out.

A Manufacturing Firm, who wish not to have their name published, say: Flooring warehouses should be steam heated, but flooring that is properly kiln dried will not shrink in a month's storage. If it does, it is not properly kiln dried. Flooring should swell, not shrink; if it is dried properly it cannot shrink. It is impossible. There must be moisture in the wood to make it shrink, therefore if the moisture is all dried out it cannot shrink, and if it is stored in a warehouse when kiln dried, and absorbs moisture, it will swell. If your subscriber's flooring shrinks, there is only one cause: the lumber is not dry.

Geo. Rathbone, Toronto, Ont.: Your subscriber states that he has a good store house for his flooring, and he uses the second storey to keep it in. I presume the store house is properly enclosed to protect the flooring from the atmosphere. If such is the case, the shrinkage may not arise from any defect in the building, but if the store house is exposed to the atmosphere in any way, the kiln dried flooring will absorb the moisture and this will cause it to swell. Consequently, when the flooring is put down in a dry building it will naturally shrink again.

My own experience is as follows: I thoroughly kiln dry all my hardwood lumber before it is worked into flooring. After it is worked I put in a dry storeroom over my boiler house. This room is entirely free from moisture, and I find it a good place to keep kiln dried materials in. Some of the large firms that make a specialty of hardwood flooring have store houses built especially for storing their kiln dried hardwood flooring. These store houses are steam heated. This system is a very good one and excludes any possibility of moisture affecting the lumber. Oftentimes manufacturers of hardwood flooring and hardwood finish have complaints made about their lumber shrinking, when they are not to blame, the fault arising from causes over which they have no control. For instance, a manufacturer may send a consignment of kiln dried flooring, trim, doors, etc., to a new building, the materials having been prepared with great care and having left the factory in excellent condition. The building for which the materials are intended is not in a fit condition to receive them. It has not been properly dried out, and consequently when the kiln dried materials, that are very susceptible to moisture, are put into a damp building they absorb moisture very quickly and swell. After a time, when the building dries out, the lumber shrinks back to the original size it was when it was sent to the building, and the manufacturer is blamed for the shrinkage.

It is impossible to dry lumber to meet all conditions. Take, as an example, a consignment of hardwood flooring for a dwelling house. Properly kiln dried, it is put down in the chambers apartments and it stands all right, except just around the radiators where the heat is the greatest. Then you come to the ground floor, and the flooring will be all right if there is a dry basement, except the portion that is laid over the furnace room, and this part invariably shrinks, as the heat under that part of the floor is greater in the winter time than any other part of the building.

Another difficulty with kiln dried flooring sometimes arises, when it is laid too near the ground. It absorbs the moisture to such an extent that it will buckle up. Then the manufacturer gets into trouble because it is too dry. As I have stated before, it is impossible to dry lumber to meet all conditions, and if the manufacturer exercises all the care that is possible in the kiln drying and care of the lumber, he has fulfilled his part. If the owners and contractors will see that their buildings are properly dried out before they put down their hardwood flooring, they will get better floors and less shrinkage.

The Boake Manufacturing Company, Limited, Toronto: Unless the flooring is stored in a warehouse that is heated to at least the temperature of the building in which the floring is to be used, it will absorb moisture, and when subjected to the heat will again shrink. The flooring does not necessarily take the moisture in consequence of it being piled near the ground, but will on a damp day absorb the moisture if piled in the top of a three or four-storey building, unless there is sufficient heat to counteract the effect of the dampness

The Georgian Bay Shook Mills, Limited, Midland, Ont.: While it is probable that the party who handles hardwood flooring does not take every precaution to keep the dampness from the stock, yet it is a pretty well settled fact that most of the so-called kiln dried hardwood is only partly dried, and if the material is not given proper treatment as it passes through the dry kiln it will never give satisfaction

The Muskoka Wood Manufacturing Company, Limited, Huntsville, Ont.: There are a great number of persons who have handled lumber practically all their lives, men who are not kickers, who are liable to feel bitter towards the manufacturer before they have disposed of the first car of kiln dried hardwood flooring which they put into stock. The trouble usually arises from the purchasers not realizing that when hardwood is kiln dried it should not be exposed to a damp atmosphere until after it is placed in the floor and oiled.

When flooring is thoroughly kiln dried every particle of moisture is taken out. The sap and heart contain greater and less amounts of moisture, and as one strip may contain both heart and sap, the lumber is uneven when it comes out of the kiln. The machines dress this stock, making it straight and even in thickness and perfectly smooth, and when it arrives at its destination it may be, and probably is, stored in a shed a few inches from the ground and with one entire side of the shed open, or what is equally bad, put into a new building with the first coat only of plaster on, and allowed to stand there a couple of weeks. The result is that a fur arises all over the wood. The sap absorbs more moisture than the heart and twists the flooring. The tongue swells larger and the groove smaller, and the flooring will not lay without a great deal of extra work. If the building is warm before the floor is laid a month, it may have shrunk, to make a very unsightly floor.

Kiln dried flooring or hardwood lumber will absorb moisture as quickly as salt, and if dealers wish to make a success of handling hardwood flooring, they will find it necessary to store it in a perfectly dry room with a considerable air space between the ground and the flooring, and during the fall and spring, or other wet seasons, the storeroom should be artificially heated. Kiln dried flooring should be oiled as quickly as possible after being laid on the floor.

Seasonable Activity at Montreal

Early Opening of Navigation will Stimulate Trade—Decidedly Firmer Conditions in the Lath Situation

Montreal, March 10—The prospect of an early opening of the navigation season in the harbor of Montreal is being hailed with delight in lumber circles. The unusually short winter season and the non-formation of an ice bridge at Cap Rouge, lends strength to the report. In Lake St. Peter only 18 inches of ice have formed, as compared with 30 inches in former years

From the office of the Shipping Federation, which is in constant touch with the conditions existing in the Gulf, report comes that at West Point and South Point the ice is closely packed, but at Southwest Point, near Anticosti, it is broken everywhere and is moving westward.

In the harbor of Montreal, the usual conditions exist, although the ice is much thinner. The main channel is open to Victoria Bridge.

On the whole, the reports indicate that the river is fairly open. Navigation will shortly be open from Quebec to Three Rivers, and from the present outlook boats will be able to ply between Montreal and Quebec by the end of the present month, with general navigation open by the middle of April.

The lumber market in this district is gradually assuming a brighter aspect. Considerable trading is reported in the various classes of lumber although at this season of the year there is a tendency on the part of retailers to withhold their orders for the coming season's needs until a later period, on the expectation of making their purchases at lower figures than wholesalers offer them at present.

With the extent of building operations that have continued throughout the winter season in Montreal, wholesale dealers are at a loss to understand why retailers are not ordering more freely. The logical conclusion would be that the latter are working off their old stocks.

On good authority we are informed that a deal was recently put through, whereby a large mill cut of spruce was sold at a figure slightly in advance of those obtainable last year.

The prospect for a satisfactory tariff settlement is having a buoyant effect upon the market at the present time. With the issues at stake successfully dealt with, the present year should prove an excellent one to the lumber trade. However, aside from the effect which the tariff arrangements will have, we must not overlook the especially bright prospect of a good building year in the Montreal district, which should result in the consumption of unusually large quantities of lumber, required for building purposes. Spruce in all grades is reported to be moving quite freely, and pine lumber, with the exception of "O" culls, is in excellent demand.

Lath continue to be in good demand and those who have held on to their stocks are beginning to realize the price for which they were holding out. An advance upon present quotations would not come as a great surprise. The better grades are especially scarce and on these prices are showing an advance of about 50 cents over last year's quotations.

Personal and Trade Notes from Quebec Provinces

A fire that is thought to have originated from an overheated steam pipe, utilized for the purpose of drying lumber, recently caused damage to the extent of $7,000 in the lumber yard of the Gignac Lumber Company, Limited, Quebec, Que.

Mr. P. D. Gordon, of the firm of Mason, Gordon & Company, recently returned from an extensive business trip through Western Canada to the coast. Mr. Gordon reports an exceedingly optimistic feeling in lumber circles throughout the British Columbia district.

Mr. S. Cole, of Nantel, Que., gave the "Canada Lumberman" a friendly call while in Montreal last week. Mr. Cole has mills at both Nantel and Morrison, Que. This year his cut of birch comprises 4,000,000 feet of logs, and Mr. Cole states that he has arranged for their disposal to a well known firm of lumber exporters.

Mr. F. M. Libby, representing the Champion International Company, of Lawrence, Mass., recently visited Quebec City and completed arrangements for the purchase of an extensive timber limit. The company are manufacturers of coated papers for the American market. The limit purchased by this company was the property of Mr. E. Joly de Lotbiniere, at Pointe aux Plateau, about 25 miles from Quebec City.

J. & W. Duncan, manufacturers and wholesale and retail lumber dealers, Montreal, have bought new premises ,and have moved their yard and office to 1833 Ontario street east, adjoining the C.P.R., on the property formerly owned and occupied by the Mount Royal Box & Lumber Company, and by Antoine Viens. They will continue their retail and wholesale lumber business at the new address. Having a railroad siding in the yard and a mill for preparing the lumber and making mouldings, they will be well equipped to give their customers good satisfaction and attractive prices.

The increase in value of property on the St. Maurice river is shown by the recent value put on land owned by the Gres Falls Lumber Company by the city. This year's figure shows a valuation of $80,300, as against $66,100 for last year, or an increase of over 20 per cent. The base for the valuation was $175 per acre. This shows the importance of Three Rivers as a centre of the lumber trade. To-day it is almost impossible for an outsider to buy mill site property on the St. Maurice as the lumber companies already hold all available sites in the neighborhood of Three Rivers and values have increased. Representatives of concerns desiring to operate on the St. Maurice have been obliged to go elsewhere for sites, a large part of the land on the St. Maurice being now blocked by the Government booming operations.

The Eagle Lumber Company, Montreal, organized in December, 1909, have contented themselves up to the present with purchasing large cuts of white pine, spruce, etc., from various mills. They have met with much success in their carload business, but have felt themselves handicapped on many occasions by their inability to fill orders from the smaller yards for mixed cars of various stocks. To meet this difficulty they have recently decided to construct a modern plant and intend to cut annually a large quantity of spruce, pine, cedar and hardwood. Complete machinery will be installed for dressing lumber of all dimensions and for the manufacture of clapboarding, laths, shingles, etc. They will make a specialty of dressing spruce, and as their cut of logs will be of virgin stock, the material produced will be of superior quality. The head of the company is Mr. Leonidas Villeneuve, who has had a long experience in the lumber business and has taken an active interest in the public affairs of Montreal. The managing director is Mr. A. P. Beaupre, and the secretary Mr. J. H. Pullin, both of whom have been in the lumber business for many years and have become conversant with all its details.

One of Montreal's Successful Young Lumbermen

Charles Allan Spencer, Montreal.

Of all commercial pursuits in Canada to-day, there is perhaps none affording so many opportunities for advancement and success as the lumbering trade. It is not a matter of surprise, therefore, that enterprising young men have selected this field as affording attractive scope for their business abilities. These younger men have come into the field under different conditions from those experienced by the pioneers of the industry. Their course has been free from the early hardships, but they have been brought face to face with a keener competition than characterized the earlier trade.

Charles Allan Spencer, the subject of this sketch, is new blood in the lumber trade, but is rapidly making his influence felt throughout Ontario and the eastern provinces, and he has established for himself a solid business reputation with the trade. It is not unnatural that he should have entered this field. Before him, his grandfather and great-grandfather were lumber manufacturers, dealing in lumber in the pioneer times.

Mr. Spencer was born in Ottawa about 28 years ago. His education was obtained at the Montreal High School, from which he matriculated into McGill University. Prior to entering the lumber business he was engaged in various capacities with the Canadian Pacific Railway and the Canadian Northern Railway Companies. With the latter company his position enabled him to gain a wide experience of the lumber requirements of a modern railway company. His eight years of railway work gave him an insight into traffic matters and the general geography of the country, which has stood him in good stead in his lumbering business.

Mr. Spencer handles the various classes of lumber, including pine, spruce, hemlock, basswood, birch, British Columbia fir and cedar, yellow pine, American oak, lath and shingles. He devotes particular attention, however, to a special line of kiln-dried spruce flooring and V or beaded sheathing, which is manufactured and finished at shipping point, thus reducing weight, on which freight has to be paid. An interesting fact in connection with the manufacture of this lumber is that it is dressed by a Norwegian process, the only one of its kind in use in Canada. The rough board during this process encounters a stationary knife instead of revolving knives, so as to ensure an evener surface than the usual method. A polished surface is obtained by passing the dressed boards between rollers. Mr. Spencer is also exclusive eastern selling agent for J R. Eaton & Sons, of Orillia, Ont , manufacturers of the "Empire Brand" of hard maple and birch flooring.

During the time Mr. Spencer has been with the lumber trade, he has been able to extend his trade continually; and during the past few years in particular it has grown very rapidly.

The Retail Dealer and His Problems

Where to Locate a Retail Yard—The Odd Lengths Problem

Location of a Retail Yard—By L. S. Heywood

In this article I shall speak of a yard in a country town—one having a yearly sale of from $40,000 to $75,000 and carrying a stock of $10,000 to $30,000.

We must first consider, before locating a yard: Is there a demand for a yard that deals in lumber and other kinds of building materials? In determining this, we must take into consideration several things. First, is the surrounding country tributary to the proposed location growing in the matter of new buildings? Are the large farms being cut up into smaller tracts, sold to new settlers who must have homes, barns, sheds, fences, and the thousand and one things that consume lumber? Are the wealthy class building better houses and stables and do the people as a whole take on the thrifty, neat appearance of prosperity? If so, the indications point to a demand that only a regular lumber dealer can supply. If, however, the farming district is limited and the small village or town in which you propose to locate is composed of retired farmers, who are living on the interest of money loaned to the surrounding community and who are satisfied to live in the same old comfortable house from year to year and to bring their water from the spring under the hill in a tin water bucket instead af pumping it into a tank with a gasoline engine or electric motor, and who tear their hair and scold every time an automobile sends their hens and geese cackling over their front fences, then think several times before investing your money in that place.

The location being favorable and prospects good, the next thing is, Where does the lumber supply come from? Is there another yard at the place, or does the general store take orders for prospective sheds, barns and houses and order the lumber as soon as the larger part of a car has been ordered, putting the unsold part of the car out in the back yard as stock? If it is another yard, perhaps you can buy it. If not, perhaps enough trade will develop to make two yards pay. Only the condition and size of the surrounding country can decide this. However, the interest of your competitor is the same as yours, and if you are friendly with him you can both get a profit on what you sell. And I say I find that it pays to be friendly with our competitors in business. Always call on him when you pass; never mind if he is rather cross with you. Perhaps he thinks you cut the price on that bill you sold to Jones yesterday, and perhaps you did So if that is the case you owe him a cigar and can put in thirty minutes of your time to cheer him up a bit. And when you go away he will think better of you for your friendly call.

If, after all, two yards do not pay, you can sell or buy and get rid of one yard. On the other hand, if it is a store handling lumber you are up against it. A bad condition. Ten to one they are using their lumber line to sweeten their general trade and are not trying to make that part of their business pay any profit. You can not buy them out, for they won't sell to you. You cannot meet their prices on the little lumber they have on hand, for they are selling at about the cost point. So you have got to keep a better stock than they do, give better service to your customers, hustle for business and wait patiently for an act of providence to relieve your troubles.

Never ask a customer for pay, or rather don't dun him at your place of business. If he is behind in his payments go and see him at his home or write him. Give him fits, if necessary, but when he comes in your yard greet him with your best smile. But collect! This word should be printed in capital letters and pasted in your hat. I never lost a customer that I forced to pay me. Use judgment, give him a chance to pay and then push him until he does pay. He will think more of you than he will if you allow the old account to stay on your books year after year. And as long as it stays there he is afraid to do business with you, and you have lost his trade. Just whom to give credit to I cannot say; that part is up to you. You must use your own individual judgment, and upon the correctness of your estimate of human nature depends your success. All men pay someone. If you can win their favor, all well and good. They will pay you. If you take no chances and only sell to gilt-edge customers, you won't do much business. Always try to look at the matter as if you were loaning money. Do not leave any uncertainty as to the agreement for payment, and inquire into the purchaser's prospects and how he expects to get the money to pay you. If you find that his expectations will probably be realized you will likely get your pay about as he thinks he can pay. If, however, you find too much doubt regarding his expectations you had better not take the chance.

Give as much personal attention to the selling as possible. Everyone who buys wants to get as close to the owner or "boss" of the yard as he can, and the more cranky the purchaser is, the more necessary for the boss to get hold of him. Twenty-five per cent. of the purchasers do not know what they want when they come for lumber. They only know what they are going to build, and much depends upon the salesman in getting them supplied with proper material. I never quote a customer on grades. I show him the lumber and when he has seen the different grades and gets the prices of each he then can tell what is suitable for his purpose, and the price is usually satisfactory. If, however, as sometimes happens, the customer is a chronic faultfinder, do not lose your temper. Tell him the knots were in the tree when it was cut; that no one is to blame, as trees always grow that way, and if, after all, you can see he still is sour and continues to wish he had "gone to the other yard," why, smile and let him go. Pray that he may never come back again, as I have some occasional customer like this that I am always sory to see coming into my yard, and glad to see going to my friend's yard across the way.

I believe that it pays to deliver lumber. You are able to work off lumber that the customer would refuse to take if he hauled it himself. Now, I don't propose to deliver anything that is not fully up to grade but in a bill of, say, fifty pieces 2x6-16, several pieces can go that are rather poor, as they will do to cut up for braces or trimmers ,and as you get quite a per cent. of such lumber in every car, you have got to get rid of it somehow, and you will have quite a time convincing most men who haul their own lumber that they should take anything not strictly first class.

I do not see how a small yard can keep house without a rip saw, using electric motor where you can and gasoline engine if electricity is not to be had. I have even used one with a horse power, until my temper was spoiled and my language addressed to the horse something shocking. We use the saw for ripping anything we may be out of, also for making batten, cutting bridging, etc., and if you run a carpenter shop with your yard the rip saw will be of much use to your carpenter who works in the shop.

Every small yard must have connection with a jobbing yard to buy sash, doors and many such things that the small yard does not and is not, able to buy direct from the manufacturers, as it would not pay to load up with a carload at one time. I have bought from several yards during the 16 years I have been running a retail yard. Most of them after you had phoned your order into them at an expense of 25 cents, would say: "We are just out." I am pleased to say now that when I send to the yard I buy the most of my special material from, I know that I will get it if it is to be found in that city. If they have not got it in stock they go after it and hunt it up. In so doing they serve me well and are enlarging their trade with many other small yards where I am acquainted

---

The Contractor's Interest in Odd Lengths

That the retailer would be face to face with considerable difficulty in educating his customers to use odd lengths is admitted even by the manufacturers, but that the difficulty is not insurmountable is firmly believed by many of them. The point of view of the consumer is the doubtful element at present, yet it is only reasonable that he should be willing to adopt odd lengths if it means a saving to him. That this can be expected to be the case is indicated by the following reference to the question in the "National Builder," of Chicago:

Since the early establishment of the lumber manufacturing industry in the United States, it has been the general custom for manufacturers to produce lumber only in lengths of even feet. Probably no single step in the production of lumber has been so unnecessarily wasteful as this one. Manufacturers have long recognized the wastefulness of the practice, but not until recent years has the knowledge of the rapid exhaustion of our timber supply brought about sufficiently deep interest in the adoption of improved methods of manufacture as to lead to the curtailment of such unnecessary waste.

The last annual meeting of the National Lumber Manufacturers' Association, at Seattle, Wash., in July, recommended that odd as well as even lengths be made standard in flooring, ceiling, partition, finish, moulding, drop and bevel siding, and urged its affiliated associations to adopt odd lengths as standard in these forms. The Pacific Coast Lumber Manufacturers' Association immediately adopted the recommendation, and began an active campaign for the universal manufacture of odd as well as even lengths in several forms of planing mill products.

At the present time practically all of the largest mills operating in the Pacific Northwest have begun to manufacture odd lengths in flooring, ceiling, siding, finish, and rustic, and are placing such lengths on the market. This is an important advance step in the policy of timber conservation.

In order to show the actual amount of the saving, an investigation was made by the United States Forest Service at a number of mills in the States of Oregon and Washington before the manufacture of odd lengths was put into practice. The figures compiled as a result of this investigation, were obtained by observing the trimming of the various forms of planing mill products at the trimming saw in the mill, and by

keeping an accurate record of the amount of clear material of each form which was wasted, because of the custom of manufacturing even lengths only.

In the manufacture of flooring, it was found that the waste amounted to 1.67 per cent. of the total amount manufactured; in rustic, 1.66 per cent.; in ceiling, 2.81 per cent., and in siding, 2.7 per cent. The average waste in all forms investigated amounted to 2.07 per cent. of the material run through the machines. This percentage, while seemingly small, assumes large proportions when it is considered that approximately 750,000,000 feet of lumber is manufactured into planing-mill products annually, in the States of Oregon and Washington.

The yearly waste in the manufacture of this amount of lumber, according to the figures of the Forest Service, amounts to 15,000,000 board feet, in these two States alone. This amount is equivalent to the annual growth of wood on approximately 30,000 acres of good timberland in that region. As a matter of conservation, this item is of great importance because the waste is absolutely unnecessary and represents the highest class of clear lumber.

While Pacific Coast manufacturers are doing their best to save this waste, the retailer, in certain instances, is strongly opposing the manufacture of odd lengths. It is his contention that the present building practice is founded upon even lengths and that the saving of the manufacturer, by the new practice, is merely transferred as a loss to the consumer, and that, after all ,there is no real gain.

In reply to this it must be said that the number of odd length pieces manufactured forms only from 10 to 50 per cent. of the total amount produced; the average number being approximately 20 per cent In the construction of modern frame buildings, it is customary, especially in that section of the country which is subject to severe weather conditions during the winter season, and generally throughout the country in the construction of first class residences, to use sub-floors and sheathing, as a nailing base. It is well known also, that the dimensions of rooms or walls of a building are as likely to be in odd feet as in even feet, and therefore it is reasonably certain that all of the odd length material which would be manufactured could easily be used, resulting in an ultimate saving, not only to the manufacturer, but also to the consumer.

The Forest Service is deeply interested in this matter inasmuch as it affects directly the conservative use of the country's timber supply, and convinced of the practicability of using odd lengths, it fully endorses the action of coast manufacturers in undertaking their manufacture and sale. Studies are under way to discover what the loss is in the southern States where pine manufacturers have not as yet begun the manufacture of odd lengths, except for the export trade which demands them.

The odd lengths movement can be greatly encouraged by a demand on the part of the consumer for this class of material when it is practical for him to use it. If the consumer would demand odd length material for such parts of his buildings as actually require such lengths, the demand could hardly be supplied if all mills adopted odd lengths as standard.

Ontario Markets in Good Condition

A prominent manufacturer in the Georgian Bay district, giving his views upon the conditions of the Ontario lumber trade at present, reports as follows: "The markets are decidedly healthy. There is less common and better white pine left unsold to-day than there has been for some time past. There is a general conviction that the building trade is going to be good this year and that the demand for stock for structural purposes will exceed perhaps anything we have had for the last two years. In that connection the demand from the car companies is to be noted. They are taking large quantities of spruce and Norway and the prices have advanced 10 to 15 per cent.

"It looks as though the export of Canadian products to Great Britain was taking on a considerably improved tone. We are finding inquiries to-day from sources which have been practically dormant for two or three years past; for instance English buyers are taking quite an interest in stock for boxes and shooks, and for doors, frames, etc. In the United States also the conditions of the lumber market are encouraging.

"Lumber stocks on the whole are in a much better condition than they have been for some time. There are less of the slow items on the list. Dealers have been able to clean house, as it were, and to get the old corners swept out. A year ago at this time, we were just in the midst of the inaugural period at Washington and there was a good deal of expectancy as to the results in connection with the tariff measure. Dealers were confident that the outcome would be satisfactory and were inclined to boost trade. The activity noted at that time was something in the nature of discounting future prosperity. To-day there is perhaps not much more activity than a year ago, but as compared with that time, the activity to-day is better founded. To-day there is undoubtedly a feeling of confidence that is not qualified or tinged by any apprehension. The prospects for renewed activity are excellent and the whole trade is looking forward to a gradual but healthy improvement in business."

Reports from British Columbia state that in some localities, especially in the neighborhood of Vancouver, recent snowfalls have seriously interfered with logging operations.

Discussion of B. C's. Timber Bill

Hon. Mr. Ellison's Interesting Outline of Existing Conditions — Strategic Position of the Province

The bill for making timber licenses perpetual in the British Columbia Legislature was put through its second reading last week and Hon. Mr. Ellison, in speaking to the measure, made several important references to the timber situation. In the course of his speech he said in part: "In 1900 there were cut from licensed lands, leased lands and Crown granted lands in the province, 250,647,493 feet; in 1909—a space of but nine years having elapsed—this has grown to the enormous total of 579,310, 960 feet. In 1900 the total revenue from timber was $145,766, being nine per cent. of the revenue of the whole province; while in 1909 the total revenue from this great asset of timber was $2,345,907, or 45 per cent. of the entire revenue of the province. During the same period the total acreage under license showed a growth from 143,000 in 1900 to 9,500,000 acres in 1909."

"In 1908, the forest revenue of British Columbia amounted to $2.-660,000. Those of Ontario were $1,230,000; of Quebec, $980,000; of New Brunswick, $2,660,000; of Dominion forests, inclusive of British Columbia, the revenue received was about 47 per cent. of the total revenue of the Dominion." . . . "We have in the province the largest area in all the world for the successful manufacture of wood pulp and paper." . . . "Indeed, the full portion of our lumber industry will not be reached during the present century." . . . .

"It has been estimated that in ten years, approximately, in the United States the timber held by private individuals will have been exhausted, and the people of the United States will naturally become customers of British Columbia for a larger portion of their lumber demands. I think that the Government of this province acted very wisely indeed when they decided upon the prohibition of the export of unmanufactured logs, for thereby they have to a great extent encouraged and increased the proportions and the importance of the timber manufacturing industry in British Columbia, with a necessarily large distribution in wages, maintaining an industrial population and working out in a variety of ways for the development and the prosperity of the province and our own people. The proportions of our lumber industry will grow—are bound to grow—and when we take into consideration the related importance of our resources in wood pulp areas some idea may be formed of what this great natural resource means to us and the province. Let me quote Prof. Gifford Pinchot in reference to this special subject of pulpwood. He says: 'We are already depending upon Canada for much pulpwood. Nearly seven-tenths of the wood we use for paper is spruce and one-third of the spruce pulpwood is imported from Canada. It is highly important that we should have free pulpwood in the future as in the past, and that Canada should impose no export duty on pulpwood.'

"In this," Hon. Mr. Ellison continued, "I must disagree with Prof. Pinchot, who speaks, of course, from the American standpoint. I contend that our pulpwood should be manufactured in Canada and in British Columbia preferably as the part of Canada best suited by all conditions for the successful prosecution of the manufacturing industry. Not only have we here the finest and largest areas of suitable pulping woods, but we have also the great essential of large water powers, and water so pure and good as to make the very best kind of paper produced. At the present time two pulpwood manufacturing enterprises are in operation in the province, one at Swanson Bay and the other at Port Mellon. The first of these, that at Swanson Bay, is devoted at present wholly to the manufacture of pulp, while that at Port Mellon is making both pulp and paper. On the matter of conservation it is also to be noted that our distinctly pulping wods grow so quickly, so rapidly, that the supply cannot be threatened with exhaustion; these woods grow so rapidly in the British Columbia climate and under the conditions generally prevailing in this province, that we have only to take care to protect the forests from the inroads of fire."

"I am quite satisfied that the time is coming when the public will much more fully realize the immense value of our great wealth in timber. At a conservative estimate I may say, the 15,000 special licenses now in force carry at least 140,000,000,000 feet of standing timber, this giving an average of some 14,000 odd feet to the acre. British Columbia's timber acreage being estimated at 180,000,000 acres, taking an approximate figure of 10,000 feet to the acre, would give a grand total of 1,-800,000,000,000 feet.

'The timber acreage of Canada is estimated at 1,657,000,000 acres; that of the United States at 450,000,000 acres; European Russia, 527,-000,000 acres; Norway and Sweden, 58,000,000 acres; Europe, 720,-000,000 acres; India, 140,000,000 acres; Australia and New Zealand, 40,000,000 acres; Japan, 28,000,000 acres, and British Columbia, 180,-000,000 acres.

"There are at present in British Columbia 215 sawmills, with a daily capacity of 4,429,000 feet, and 59 shingle mills, with a capacity of 3,-385,000 thousand. This gives a lumber manufactcring capacity for this province of 1,300,000,000 feet cut per annum. The provincial timber inspector estimates the actual cut for 1909 at 750,000,000 feet."

THE WOODWORKER

Solid Circular Saw Fitting*

The proper fitting of solid tooth circular saws is an art that has been very much abused. Its study has been neglected, by a very large percentage of smaller mill men who are either careless or indifferent to the proper care of the tool, which is, to my mind, the determining factor in the making or unmaking of the mill man.

The teeth of all saws wear narrowest at the extreme points, consequently they must be kept spread, so that they will be the widest at the very extreme points of the teeth, otherwise the saws will not work successfully. The points of the teeth are variously fitted with full swage, spring set, or half set and half swaged. There are doubtless conditions where any one of the three forms may prove preferable to either of the others, but in general practice the full swaged tooth is the only thing to run.

Plenty of hook; as deep a gullet as is consistent with a good strong tooth will, in my opinion, be the saving of power, on the one hand, and has the power of saving dollars, on the other. Trying to make lumber with a saw whose teeth are devoid of sufficient throat room to chamber the dust, and which has no hook and a high back into the bargain, so that the teeth look like "potato mashers," is one of the most annoying sights in a saw mill, (see figure one). For hardwood there should be more hook, higher back and less spread or set on the teeth than for softwood. Pitchy or springy timber requires much more set or spread than any other wood. A saw swaged full on both corners

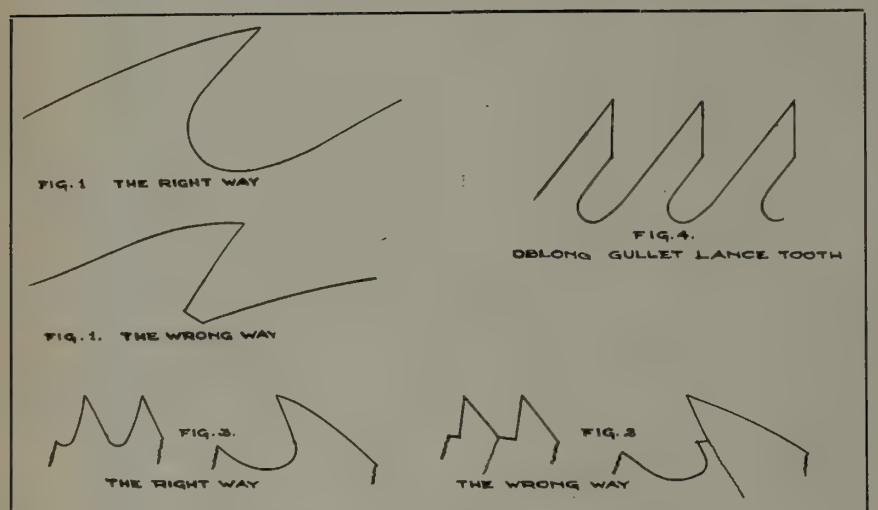

Diagram Illustrating Methods of Filing.

will do the fastest cutting and make the smoothest lumber, but requires the most power. It is not always possible to spread points of teeth exactly alike when swaging, but they may be reduced to uniform width and levels by the use of a file dresser or swage shaper. This insures smooth cutting and strong full corners that are not liable to break off in hard cuts.

Mill men who run solid tooth saws, no matter what the capacity of their mills may be, or how poorly equipped otherwise, should have an eccentric swage, and swage shaper, also an emery gummer. These three little tools will save more than double their cost in one good season's cut.

Without the use of a gummer, one is liable to lessen the hook of the tooth, and to cause the teeth to become high on the back eventuaally, producing a heavy blunt tooth, which is the hardest thing on power. Strange as it may seem, the men with the weakest power in their mills are the very first to commit this offence. The regular use of a saw gummer will keep the gullets round and large enough to chamber the dust properly and prevent the filing of sharp corners in the throat. This mistake has ruined thousands of saws. Always bear in mind when filing sharp corners in the gullets of your saw teeth that you are starting a possible crack in the blade (see figs. 2 and 3). When gumming saws, use care not to glaze or case-harden the steel, for this is also liable to cause cracks and breakage. With a gummer one can shape the teeth properly, and maintain the hook and throat room so essential to successful log sawing. With an eccentric swage one can produce a uniform spread of the teeth, in one quarter of the time taken when using an upset swage, besides giving far better satisfaction, and leaving the teeth of even length; whereas upsetting produces long and short teeth, causing the saw to be out of round. To get the best results it is absolutely necessary always to joint your saws and keep them perfectly round, so that each tooth does its share of the work, and is better in every way. A swage shaper is also more up-to-date and efficient than a side file dresser. It makes the point of the tooth strong, produces a perfect bevel and magnificent corners on the extreme points of the teeth.

The greatest wear of a saw is on the under edge of the teeth, and the wear under the points is in proportion to the amount and extent of the feed. Thus, if a tooth at each revolution takes out one-eighth of an inch, it will tend to become dull for one-eighth of an inch below the point, or more or less as you diminish the feed. File to a point, but not to a thin wire edge. Do nearly all the filing on the under side of the teeth, and see that they are well spread at the point. File square and have the corners project alike on both sides of the saw. Do not try to run dull saws, for a few minutes spent with a file or emery wheel will save tenfold the amount of time and labor consumed in forcing a dull saw, besides making a saving in power consumed and a heavy percentage of difference in the quantity and quality of the lumber cut. It is just as important to keep a saw sharp as it is to keep up sufficient steam in your boiler in order to drive your mill properly. A sharp saw requires less set, takes less power, cuts cleaner and smoother, and is in every way superior to one not in good condition.

Most men file their cut-off or slab saws on a bevel, both on front and back of tooth, but in order to have a strong point some of the filers have found that a bevel filed on the front, with a few brushes of the file square across the back has given far better results. Others have filed square on front and bevelled the back with good results, but in any case do not file to a slim wiry point. It won't last. File merely to a point and no more.

A cut-off tooth for all around work, such as slabbing, trimming or slashing, as shown in fig. 4, is in my opinion the easiest of all cut-off teeth to file. It is practically a V-tooth with an oblong gullet which in itself is on the rip tooth hook. There is no danger of filing this style of tooth on sharp angles in the gullet. Thus cracking is avoided. This tooth has given better satisfaction than any of the other various shaped teeth used for circular cross-cut purposes. There is no saw that is more abused and roughly used than the cut-off saw. If men would use the time keeping the cut-off saw in proper shape, which they spend in filing that long sharp bevel into the throat, there would be a large saving in saw bills annually by the milling fraternity.

A rip or edger saw is fitted in various styles, spring set and filed square on the face and slightly bevelled on back. Some are filed square. Some are half set and half swaged. Others are swaged full on both corners. It is difficult to say which method is the best. The full swage is in general use in the large mills where they have more than one set of saws, and is apparently the easiest and most convenient method under the circumstances, but in the small mills where there is only one set of saws, and where they are fitted on the mandrel, the spring set, bevelled on the back, seems to be the proper thing. The inserted tooth edger is fast displacing the solid tooth edger in all parts of Canada.

Packing Cases Too Expensive for Firewood

Editor "Canada Lumberman":

Under this heading it would be very interesting to have something said by persons interested in manufacturing the case, as well as by the retailer who has to pay a fancy price for the case—which is of no value to him once he has removed his goods, "except for firewood."

On many occasions a merchant will receive $5 worth of goods and pay 50 cents for the packing case, which amounts to 10 per cent. of his purchase.

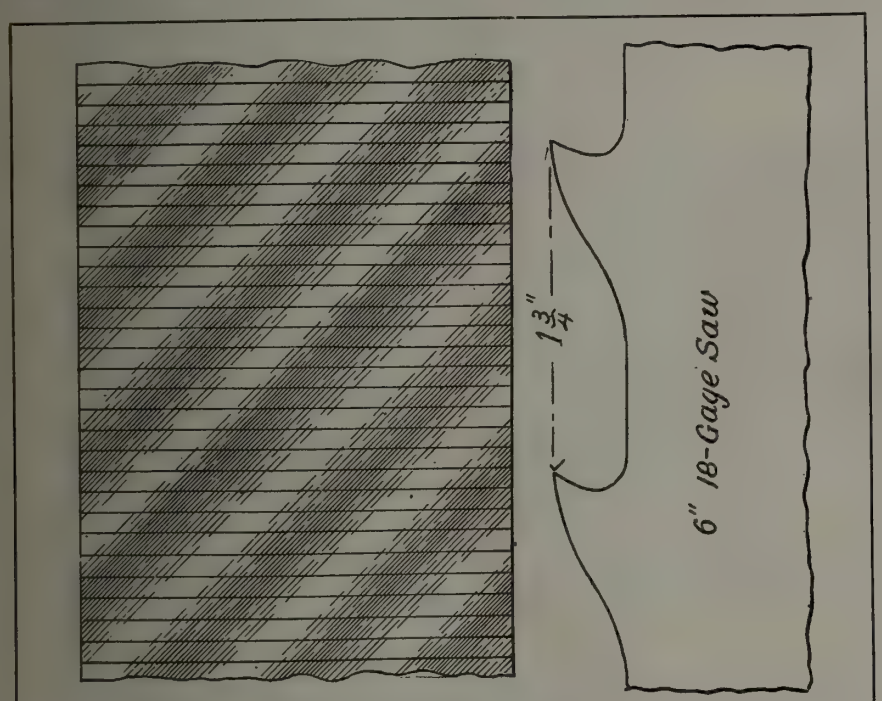
We may say, "the packing case business is a good business, paying good profits when well equipped, using a large amount of common lumber, and should be kept up." Very well; we know the case is paid for. Everybody has to line up and pay his share for the millions of feet of lumber which are turned yearly into the packing case business, and destroyed after being used once. We find every day the necessity of protecting our lumber resources, and the time has come when we should be able to do something to get good wear and usage from the lumber used for packing cases.

Why not make these cases well built, strong and durable? By adding a little ironwork they can be made to fold compactly so as to be returned in good condition to the wholesaler, who will credit the customer with the cost.

The manufacturer could charge more for his labor, and gain considerable space in the handling of made-up cases, and the cost would be less for shipping them to the wholesaler. The latter would also gain considerable space in storage.

Let us look at it only on the lumber-saving side. Suppose that cases will make ten trips in place of one. Here is a saving of 90 per cent. on the lumber, and a similar saving on nails. I understand that

there are quite a variety of shipments for which it will not tppear practicable to apply this rule, but by giving this question fair consideration, we could in a short time bring about a considerable saving.—N. J. Millette.



More Solutions of the Washboard Problem

The article upon "washboard" ridges which appeared in a recent issue of the "Canada Lumberman" brings forth an interesting reply from one of our readers. In order to make the article clear, the illustration appearing with the original article is reproduced herewith. The reply is as follows:

It is quite difficult to judge exactly the cause of said ridges, without having more description about the condition of the saw teeth. If the writer looks at the ridged sawn boards, he should find them of wavy nature in the grain of the wood and sidings of butt logs, and the fact that the ridges are greater in the centre of the board indicates the case quite clearly.

The saw that makes ridges is usually "spring set," and when it has been in use for some time the extreme point at the outer edge of the tooth gets "rounded off." The saw, then, has a tendency to follow the grain of the wood. The "swage set" tooth would do the same when not properly side dressed.

To overcome this difficulty, if the saw is "spring set," change the set of the saw frequently, that is, bend the tooth pointing out one way to the other, and vice versa. In this way we make the side of the saw just like new, having a straight side of teeth that will cut clean through

Washboard Markings on Lumber.

the wood. The same rule applies to all band scroll saws as well, when the saw gives trouble in following the given line.

The shape of tooth as illustrated in the article is a little weak. More stock could be left at the back of the tooth without affecting its cutting facility and clearance. I hope these few points will give some light on the case, and if necessary I would be pleased to give further information. —N. J. Millette.

Largely a Matter of Filing

Another correspondent writing upon the same subject says: "I see in a recent issue an article on sawing, entitled, "What Causes the Ridges?" and a picture representing an appearance on the sawn surface like a washboard. It is some defect in your saw tooth points. A saw will run nicely and do smooth work even if it is deficient in good timber, but you get cross grained timber with twisted grain. The teeth must be perfect. Have you examined the tooth points? If some teeth are the least bit short they will make the trouble. If they are lacking at the extreme cutting points to any extent they will do it though the tooth may be full width back from point. To work straight through all kinds of timber you must have a flush full square corner at the extreme point of the tooth.

"My experience is mostly with circular saws. Once I had a first class shingle sawyer. He got beaten on a shingle saw, a new 42-inch saw. It began to make shingles like a washboard and so much so that the saw occasionally would go into a perfect quiver. He was cutting pine, large blocks, and some blocks would work all right and others come out washboard like. I hesitated to try it, as he was a man of great reputation, but what could I do? I took the saw off, fitted on another, and let him go on with it and left the other off for the time. When I got him away one day I fitted on the other and examined it. I found that at the extreme opposite sides the teeth were longer, and consequently the saw quivered and trembled. I trimmed the saw, filed it up and put it to work and it worked perfectly. When the man returned he was surprised to see the saw work so nicely. I've never been beaten with any saw that's fit to cse at all in shingles. I believe in swaging enough to harden the extreme cutting point so as to keep the corners good, unless the saw is a hand one. Then I believe in a set that holds its place. A man who is considered a good shingle maker, told me recently that he stripped the saw every day. One day just such a man came into the mill and went at advising me in this manner. I told him such a man in my way of work would just stay long enough for me to make out his time. Then again, some saws won't stand a spring set. Such saws are the very best. Every day finds them doing nicer work, smoother and truer. I can set any saw, and I'll let it run until it must be set again, and that, with fair usage, won't be often. I file a saw, never reduce the extreme cutting point, bring it up there, then stop unless some accident takes place to alter the points."—Hugh Cameron.

A Shop-made Belt Shifter.

The following description of a belt shifter is submitted by a reader of the "Canada Lumberman":

The illustration shows a belt shifter which I constructed in my shop. I have never seen anything else like it. It shifts the belt on a wood lathe and works almost instantaneously. You pull the lever and the roller lifts the belt off the pulley, making the move easily. A is an arm, say 2-inch x 4-inch wood, through which are bored two holes to allow studs S.S. to pass through tightly. XX are rollers of wood running

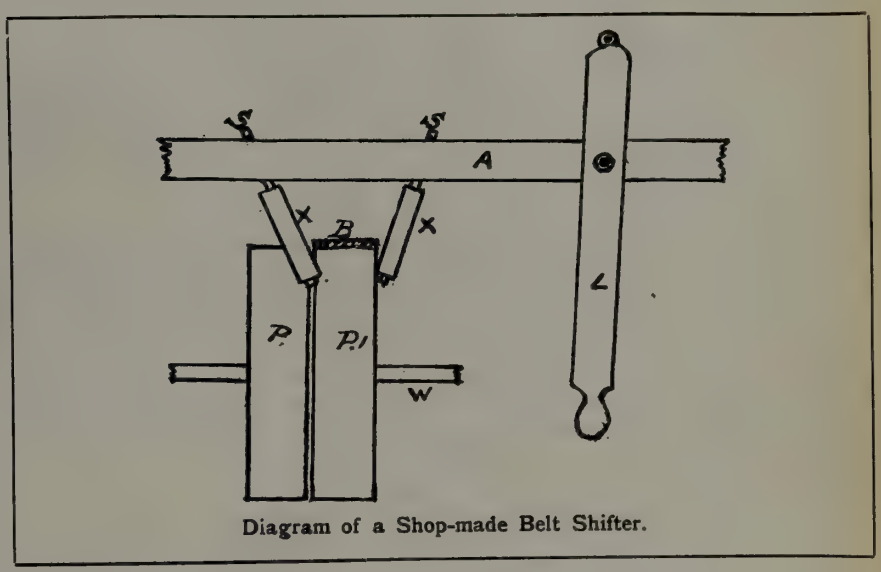


Diagram of a Shop-made Belt Shifter.

loosely on studs S.S. B. is the belt. P.1. is the tight pulley, P. the loose pulley. L. is the lever. The angular rollers will ship a belt instantaneously.

Power Transmission for Woodworkers

Power transmission is just as important as power itself. After the power is obtained, the question that concerns the woodworking plant is how best it may be transmitted. There is a wide difference of opinion as to the merits of the several ways of sending power through a plant.

First, there is the belt transmitter, which is again subdivided into three kinds: Leather, rubber and canvas. Second, there is the rope drive; third, the friction drive; fourth, transmission by chains and gear wheels.

Some factories use nearly all these types, and most factories employ more than one kind. The chief difference lies in the kind of belts preferred, rather than in the specific style of transmission; for example, there are mill owners who will not allow anything in their plant but a leather belt, while there are others who pin their faith to rubber or canvas. As there are different types, so are there different points of merit.

In the plant where all leather is used operators are sticklers for an expensive belt. For high speed machines and a medium short belt, leather is regarded as preferable. In fact, some mill owners argue that there is no other belt but leather that will carry the speed without slipping.

There should be, in overhead work, a good distance between shafts. On this kind of a drive it is stated that it is a waste of money to buy a leather belt, because a rubber or canvas belt will do all that is required without trouble. In a number of cases the belt will have to be run in a half-twist, and this the leather belt will not carry without great wear. A painted canvas belt will stand great abuse, though they stretch easily.

However, if the belt runs horizontally and there is the proper distance between shafts this stretching or sagging will not bother much. It

will in reality give more power. One concern ran a 14-inch red canvas belt from one motor to the line shaft, transmitting some 30 horse power. There was a 10-inch pulley on the motor and a 42-inch pulley on the line shaft, and the distance from centre to centre was only 21 feet.

There was a good deal of trouble with this arrangement. The belt was not long enough and the drive pulley was too small for the load. The belt, however, stood the strain for over a year. The concern next tried an endless double leather belt about 15 feet longer than the canvas belt and the motor had to be moved back to accommodate it. For the first few weeks there was much slipping, but later it became perfectly adjustable and not since, some three years ago, has it given any trouble.

For overhead counter-shafting rubber belts are found satisfactory, in most cases. After a rubber belt begins to split it might as well be thrown away, for it will not last long.

Double leather belts are very good but they should not, according to many mill owners, be used on pulleys under eight inches. On smaller pulleys there is too much slippage, more than is really noticed, and the belt wears away on the under ply.

Rope transmission is fast coming into use. Its specific place in the factory is from the engine or motor to the line shaft; and for this purpose it is considered as just the thing. The use of the tighteners does away with slipping and the drive can be extended almost to any distance and around all kinds of obstructions.

The friction drive for special purposes is also coming into use. It is a positive drive, with variable speed, and can be used on several kinds of woodworking machinery.

In the case of the quarter-turn belt there is much dissatisfaction. Mill owners, as a rule, do not favor it, and have discarded it wherever possible.

The subject of belt dressings is one in which every mill owner is interested. It has caused considerable trouble and probably will cause more. The dressing tends to rot the belt, and with due regard to the firms manufacturing these dressings, the fact remains that the mill owners have usually found them unsatisafctory.

Canvas belts should be painted every two or three weeks with red paint mixed with oil. Rosin is best for rubber belts, though this has many disadvantages and is shunned by operators.

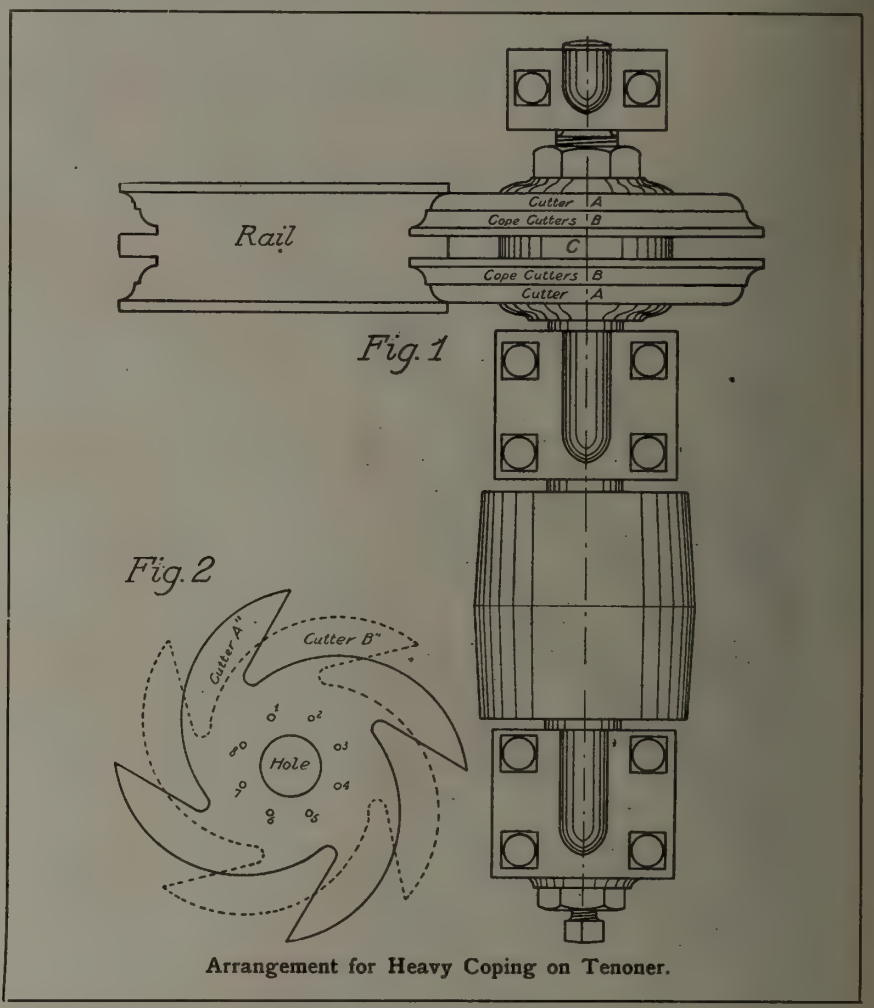
Summarizing things helpful and things not, it may be stated that mill owners do not favor belt tighteners because they ruin the top side of the belt and stretch one side as against another. A belt clamp should be a part of the equipment of every shop. They are made in sizes to fit almost any belt and they add to the life of the belt if laced on the pulleys. Machines should be built with a sub-base so that it would be possible to take up the slack without having to cut out a piece of the belt. If equipped this way, endless belts could be used on pretty nearly every piece of machinery besides lessening half the belt troubles.—Hardwood Record.

Heavy Coping on a Tenoner

Some who read this will call to mind many of the troubles incidental to the ordinary cope cutters, curved and projecting out far beyond the head, and how often they have bent and changed the fit of the cut, and, when the work was put together, found that it was quite a job to make it look even partly decent, if it would go together at all.

The coping arrangement shown in the sketch is the result of such troubles as mentioned above, and does the work accurately and quickly, without that peculiar feeling that goes through one when he hears the ordinary cope cutter chatter while in a heavy cut, when the thought is, will it break, will it fly out, or will the springing of the cutter change the shape enough to do any harm or spoil the fit?

A careful study of the drawing will show that it takes more than a heavy cut to change this machine. You may stop it, but that is all; you do not change it. Fig. 1 shows a coping attachment to the ordinary tenoning machine, but a great deal more powerful and accurate. It will be noticed that in this arrangement only one spindle is used, instead of two, as is usually the case, and that there are three bearings instead of two, also there is a bearing on each side of the cut, thus preventing any leverage movement, as is always the case when there is no bearing on one side of the cut.



It will be noticed that the cutters—which are milled—are fastened similarly to fastening an ordinary plow saw. The size of the tenon is regulated by the size of the collar between the cutters—see C. The balance of the arrangement is simple and needs very little explanation. This device can be made very powerful by simply increasing the width of the belt; the rest speaks for itself.

Fig. 2 shows how the cutters are made. The teeth or cutting parts are all milled in a circle, whose radius points are at 1, 2, 3, 4, 5, 6, 7 and 8. The full lines and dotted lines represent two cutters. As will be noted in fig. 1, A and B are two separate cutters, and each has four cutting points, thus making eight cuts above the tenon and eight below it at one time, against four or eight, as is usually the case, and only using one-fourth or one-half the power to do the same work.

Note the great stiffness in these cutters. The back being milled from the same circle on all cutting points, ensures accuracy. All that is necessary to sharpen them is to file or grind on the inside. With a little care one can always maintain accurate shapes and the coping will always be the same. This style ensures long life to the cutter before it is worn out; it also shows a great amount of clearance for shavings.

In fig. 1 is shown a rail in position being cut, cutters in place, etc.; it also shows it to be veneered or built-up stock, and any one who has had much to do in tenoning this kind of stock knows how hard it is on a cutter. The glue is very bad for ordinary cutters, and that, coupled up with hardwood edges and hardwood veneers, and to this added knotty common core stock, makes it necessary that there be something better than the ordinary cutters and machine arrangement to do heavy work of this nature.

While not absolutely necessary, it makes the cut easier, to swage the points towards the tenon a trifle, to prevent the body of the cutter rubbing on the tenon. It is also well to swage the points of cutter A towards cutter B, in order that there can be no space between the two cutters

Arrangement for Heavy Coping on Tenoner.

left uncut. These cutters can be made any shape desired and in any thickness, or solid, single, and with more or less cutting points, as the work may dictate or the pleasure of the operator suggest.—The Woodworker.

How to Find the Strain for a Band Saw

In an article some time ago some one asked the question, "What is the rule for finding the strain to be carried on a band saw?" Also, "What the strain should be on a 16-gauge 8-inch saw?"

Not having seen any reply to it, here is a rule that I consider as accurate as any I have ever known: Multiply the width of the saw in inches by the number of thousandths of an inch in thickness. and that product by 10, for light or medium work, or 12 for extra heavy work; the result will be approximately the number of pounds strain.

In the case of the 16-gauge 8-inch saw, which is .065-inch thick, $8 \times 65 \times 10 = 5{,}200$, or 5,200 pounds strain; or for extra heavy work, $8 \times 65 \times 12 = 6{,}240$, or 6,240 pounds. Perhaps some one may know a better rule, but this is what I estimate the weight by, and find it very satisfactory.

For an 18-gauge 8-inch saw, the strain would be estimated as follows: $8 \times 49 \times 10 = 3{,}920$, or 3,920 pounds—approximately 4,000 pounds. A 19-gauge 6-inch resaw, $6 \times 42 \times 10 = 2{,}520$, or approximately 2,500 pounds.

Knowing the width and thickness of the saw, it is a very easy matter to figure the strain required.—L.R.B. in the "Woodworker."

P. A. Paulson is putting in a $100,000 sawmill at Kitchener, B.C.

Construction has begun on the Joyce sawmill, six miles from Quesnel, B.C.

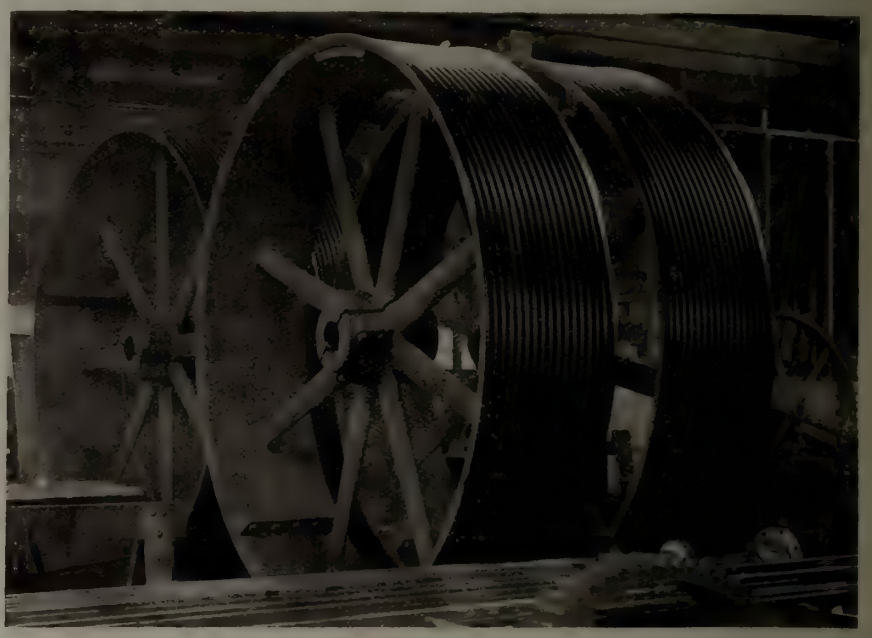
What Manufacturers of Logging, Sawmill and Woodworking Appliances are Doing

The Home of The Dodge Wood Split Pulley

The illustrations accompanying this article will give one an idea of the extensive and well equipped plant of the Dodge Manufacturing Company, which is located at West Toronto. The location is splendid for manufacturing purposes, being very convenient to the railroads which serve Toronto. It is now some 24 years since the company established their first factory on Adelaide street west. The growth of their business since that time has been a constant source of encouragement to themselves and has attracted a great deal of attention from the public. At the time when the company first established their factory in Toronto there were many people who wondered what the Dodge pulley was. It was not long before they were informed. In fact one of the most important causes of the company's rapid growth has been the fact that they have consistently and continually made a point of educating the public regarding their product by means of a well considered advertising campaign. The result is that to-day, practically everybody in Canada is well acquainted with the Dodge pulley and its numerous merits. From the date of its establishment the factory was obliged to work overtime in order to keep up with its business. In 1889 the company constructed what is now the older portion of their expensive plant at West Toronto. The plant had a capacity of 200 wood pulleys per day and it was not long before even this output had to be exceeded. In 1900 the capacity was increased to 300 pulleys per day, and since that time further increases have been made and still the demand grows larger. About one-half of the product is consumed in Canada, the other half being exported to Great Britain and the colonies.



View of Machine Shop, Dodge Mfg. Co.

Heavy Rope Drive Tightener, made by Dodge Mfg. Co. for Canadian Rolling Mills

The plant covers something over six acres. The wood pulley works are substantial brick buildings 270 feet by 60 feet, with three main floors and an annex 60 feet x 60 feet. The machine shop is one of modern design, a handsome brick building 200 feet long by 80 feet wide. It is excellently lighted and heated and is supplied with electric motors throughout. A 10-ton 3-motor travelling crane covers the entire centre floor. The tool room is equipped with the most modern appliances and with a general equipment of machine tools which they claim are unsurpassed in any shop of its proportions. A large turning and boring mill, weighing over 80,000 pounds, with the assistance of the travelling crane, handles a 16-foot wheel as readily as a 2-foot pulley might be handled in an old time shop. An important feature of the plant is a mammoth planer weighing over 30 tons, and among the other interesting appliances which are included in the equipment are high grade turret lathes, special pulley lathes and massive shafting lathes. With such an equipment it is not to be wondered at that the company are able to produce pulleys and shafting of excellent quality in large numbers.

Heavy Rope Drives, made by Dodge Mfg. Co.

The foundry is of the most modern type, being of substantial brick construction with monitor roof. It is equipped with a 10-ton 3-motor travelling crane which runs the full length of the centre span; two modern cupolas, one ten tons per hour, the other five tons per hour; separate blowers motor-driven, three modern core ovens, moulding machines, crane scales and everything of the latest and best type.

Two Car Loads of Dodge Grain Elevator Belt Conveyors ready to go West.

The supplies of pig iron, scrap, coke, sand, etc., are brought by train along the company's siding and unloaded directly into their alloted places. The plant includes also a castings cleaning room, blacksmith

shop, pattern shops, pattern stores, a huge wheel storage rack where 300 or 400 tons of steel shafting (rough and finished) are carried in the yard outside the plant. There is also installed a 20-ton yard crane for handling heavy material. This, together with a complete industrial railroad connecting the shops and the travelling cranes and numerous gib cranes, reduces the handling to a minimum. The office building is 60 by 40 feet two storeys and separate from the rest of the plant. In this building the manager's office, board room, and general offices occupy the ground floor and upon the floor above are located the engineering, draughting and advertising departments. A very complete system of office telephones connects the various departments with one another and also connects the plant with the city office on Bay street. The company produce their own electric power and light.

The Dodge wood split pulleys have come to occupy a unique position in the industrial world. They are used everywhere throughout Canada and many other countries. In their manufacture the company use enormous quantities of hard maple, much of which is secured in Canada. The wood is all kiln dried in the company's own kilns, so that there is no possibility of shrinkage. The wood is then cut up into small sections which when assembled constitutes the pulley rim. The centres and shafts of the pulleys are made in the moulding room and when the rims and centres have been assembled the rim is turned and smoothed. After this comes the varnish and painting process and the pulley is then complete. The company carry in stock large numbers of pulleys ready for immediate shipment, finding that this is absolutely necessary because great numbers of their customers, being well acquainted with their products, order pulleys from stock just as an ordinary man would order a pair of boots or shoes. A visit to the company's plant is a liberal education in this particular line of industry. It provides a most excellent example of the effectiveness of modern business systems. From the purchasing of the raw material to the selling of the finished product, every process is subjected to a rigid systematic treatment. The result is that the managers are in personal touch with every detail of their business. A representative of the "Canada Lumberman" recently visited the plant and was most courteously received by Mr. C. F.Wheaton, secretary-treasurer and general manager, who conducted him personally throughout the plant and explained in detail all the interesting particulars of the work.

The substantial construction of the "Tower" Edgers, which are manufactured by the Gordon Hollow Blast Grate Company, of Greenville, Mich., is strikingly demonstrated by the fact that, notwithstanding the large number of them that are constantly being shipped, and the distances they are being transported, breakages in transit are unknown, while orders for repairs are confined almost entirely to those whose mills have been destroyed by fire.

Lumber Matters in the Law Courts

Delivery of pulpwood, ties, etc.—The case of Beauleau v. Auger, on appeal from the Court of Review at Quebec affirming judgment of Sir Francois Langelier, C.J., awarding $4,279 to respondents in the action for account and damages for breach of contract for delivery of a quantity of pulpwood, railway ties and square timber, was recently heard in the Supreme Court at Ottawa. The appellant contends that contracts have been miscontrued in courts below and that there was a compromise deed executed which accorded satisfaction and that there was no reason for awarding damages.

Interpretation of Contract—Judgment in the case of McKean v. Dalhousie Lumber Company, Dalhousie, N.B., has been delivered by Mr. Justice White. His Honor gave a verdict for defendant of over $300 on the off-set that the company put in. The cause of action was alleged breach of a contract between Mr. McKean, a director of the Dalhousie Lumber Company, and Mr. Arthur Hilyard, managing director of the company. The company had a quantity of logs left over in 1906 from the previous year, and during the winter of 1906 they were getting out a large quantity of timber, the estimated cut being between seven and eight million feet of spruce. At a meeting of the directors the probabilities of the cut were discussed. Mr. McKean made an offer for the season's cut, and by resolution of the directors, Mr. Hilyard was authorized to close with him, which was done. The formal agreement drawn up with him was for between seven and eight million superficial feet, without any reference being made to season's cut of logs from which lumber was to be sawed. Between losses which resulted through working through the Restigouche Boom Company's boom and hang up of the drive, the company was only able to cut four million or four million five hundred thousand superficial feet during the season of 1906. The following spring Mr. McKean demanded the balance, amounting to over 3,000,000 feet. The company refused to give him any part of the cut of 1907. As a result the action was instituted. Defendants relied upon some late English cases to the effect that if a contract is made on the basis of events turning out a certain way and they do not turn out that way, relief will be afforded even though it is not stated in the agreement that the contract is on the basis of these events transpiring. The plaintiff contended that the contract could not be varied and should have been carried out as written.

National Wholesalers' Convention

Interesting Addresses at the Cincinatti Gathering — Insurance Problems Discussed—R. H. Higbie the New President

The 18th annual convention of the National Wholesale Lumber Dealers' Association was held at Cincinnati, Ohio, on March 2nd and 3rd. Delegates were present from many parts of the United States and also from Canada. President George F. Craig, of Philadelphia, in opening the convention, gave a resume of the year's events so far as they concerned lumbermen, remarking that the most prominent feature had been the irregularity of trade. For the coming year there was a promise of much better things. The work of the association during the year had gone on satisfactorily and their financial situation had been materially improved.

The secretary, Mr. E. F. Perry, delivered an interesting and detailed report, during the course of which he referred to the Canadian members of the association as follows: "Our members in Canada continue to avail themselves of the membership privileges and each year this business seems to interweave itself closer with that of the States, and we have seen almost a reversal of conditions in the last few years, large quantities of certain kinds of lumber being constantly shipped to Canada."

Reports were presented by the bureau of information, the committee of marine and insurance, and the committee on fire insurance supervision. The latter report, which was presented by Mr. Geo. H. Holt, was one of the most interesting which the association had ever had presented to it. Mr. Holt stated that he was convinced that the present system of insurance operates as a great injustice to and a handicap upon all commerce and industry throughout the United States. The amount of money taken out of industry and commerce in the way of insurance premiums amounted to double the fire loss. Lumbermen in other countries were able to secure their insurance for one-tenth of the cost in the United States. He advocated strongly the movement for State-made rates for insurance. While this might involve some hardships at the beginning, they would not be greater than the hardships which had to be borne to-day, and in the end they would probably secure rates based upon fire cost conditions. He spoke strongly in favor also of having a correct record of fire losses according to hazard, so that the rates might be based upon the cost of insuring the property and not upon "what the traffic will bear" as a business proposition. If they could establish such a condition, under which the hazard would measure the rate, he believed that competition would do the rest. He suggested that the association, through a committee, should investigate the proposition and that the local State organizations should be invited to co-operate.

The report of the committee on terms of sale and trade ethics recommended the adoption of the code of ethics as revised and adopted at Chicago on June 8, 1909, by the American Lumber Trade's Commerce.

Mr. N. H. Wolcott presented an interesting report upon trade relations. After summing up the difficulties prevalent in the relations between wholesalers and retailers, he said: "We believe that most of the wholesalers are loyal to the retail trade, and most of the retailers appreciate the wholesaler who protects their interest. We believe also that the relations between the buyer and seller in the lumber business to-day are as cordial as at any time in its past history."

On Wednesday a banquet was given to the delegates and a most enjoyable evening was spent.

Thursday morning was occupied with the presentation of further reports by committees, one of which was that of the committee on fire insurance, which stated that the lumber insuring companies and lumber mutuals had all passed a very successful year. Competitive insurance facilities afforded by these companies had materially reduced the rates of stock companies, so that all members of the trade, whether policy holders or not, had benefited.

On Thursday afternoon the trustees held a meeting after the general convention had adjourned, and chose the following officers for the ensuing year: R. H. Higbie, president; F. R. Babcock, 1st vice-president; F. E. Parker, 2nd vice-president F. W. Cole was re-elected treasurer and E. F. Perry secretary.

H. W. Lightbourne & Company, Liverpool, Eng., report under date of Feb. 24th as follows: "It is predicted that the production in New Brunswick and Nova Scotia will be greatly curtailed owing to the unfavorable winter for operations in the woods. What the extent of the curtailment may be, cannot thus early be stated with certainty. The United States market did not recover so quickly as was by many expected, from the depression due to the 1907 financial panic. The position is, however, steadily, though slowly, improving, so that an increased demand may be looked for from that direction. There has been no setback to the prosperity of Canada, which uses, and will, we believe, continue year by year to use an increasing quantity of spruce for local consumption. Manufacturers in New Brunswick and Nova Scotia have demanded, and obtained, a very considerable increase on last year's price. Baltic and other markets have also opened on a materially higher level. We trust, therefore, it is not unreasonable to expect a commensurate rise in the price of spruce.

WANTED & FOR SALE DEPARTMENT

PUBLISHERS' NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 15 cents per agate line ($2.10 per inch) each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Employment Wanted" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies.

Advertisements of "Employees Wanted" will be inserted at the rate of two cents a word net. Cash must accompany the order.

Advertisement must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue.

WANTED—LUMBER, ETC.

Wanted White Pine Pump Squares

Must be Quarter Cut

7"x7", 6"x6" AND 5"x5". HIGHEST MARKET prices paid, also 2" and 3" Tank Lumber. Ontario Wind Engine and Pump Co., Toronto tf

Basswood Wanted

TWO MILLION FEET OF WINTER CUT Basswood. Can use full run of logs. Cut to order. For particulars address Box 879, Canada Lumberman, Toronto. tf

Logs Wanted

WANTED TO PURCHASE FOR SPRING delivery, Sawlogs in Red and White Pine, Spruce or Jack Pine. Delivery at Haileybury or in Montreal River, Empire Lumber Co., Ltd. Latchford, Ont. 6

Birch Wanted

WANTED—SEVERAL STOCKS OF GOOD Birch to be cut to order. Any quantity up to two million feet for next summer's delivery. Apply Box 918, Canada Lumberman, Toronto. 7

Wanted

TO BUY FOR CASH, STOCKS, 1910 CUT, Birch 1" to 4" thick. Also 300 to 400 M. 1" to 2" Common and Better dry stock to ship at once. Write Box 268 North Bay, Ont. 9

Spruce and Hemlock Lath

WANTED—SPRUCE AND HEMLOCK Lath for prompt shipment. State dryness and price delivered Albany, N. Y. Box 942, Canada Lumberman, Toronto. 7

Logs Wanted

WANTED TO BUY OR SAW BY THE thousand, one million feet of Hemlock. Pine and Cedar, Tamarac or Spruce Logs. Good harbor on Georgian Bay, rail and water shipment. Address. Box 931 Canada Lumberman, Toronto. 8

N. B. Principals only. 9

Melting Wood

It is now claimed to be possible to melt wood, by heating it in a vacuum, producing a hard homogeneous substance that apparently has an industrial future before it. The history and present status of the process are given by Francis Marre in "La Natur," Paris. To melt wood "appears at first sight to be an impossibility," he remarked, "but it is, in fact, possible and practicable. Melted wood has been hitherto only a laboratory curiosity, but it may well be that industry shall presently discover practical applications of the greatest interest." He continues:

"Although wood is eminently inflammable, it melts at a relatively low temperature, but in precise conditions, and only when it is absolutely removed from contact with oxygen, so that its combustion is impossible. This may be understood when we remember what its composition is. When its immediately soluble constituents have been removed, by means of alcohol, for instance it gives, on analysis organic acids, water, oily essences, silicates, sulphates, phosphates, chlorids, and hydrocarbonates of lime, potash, soda and magnesia, carbonic acid, carbonated hydrogen, etc., that is to say, solely bodies susceptible of being evaporated by chemical affinity in the formation of determinate substances.

"Starting from these data, Messrs. Bizouard and Lenoir, the former an electrical engineer, the second a printer, studied in 1891 the problem of the fusion of wood, and after a year of investigation succeeded in producing a sample of melted wood which, although obtained without special apparatus, still had remarkable peculiarities. The details of the process are not exactly known; they operated in a closed vessel at a relatively low temperature — that is about all that we can gather from the technical journals of the period.

"But their work has been taken up by others, and now there is a full operative technic that enables us easily to obtain excellent results. A metal receiver, a sort of boiler having a double bottom through which superheated steam passes, is filled with bits of wood; it is closed by a lid similar to that used in autoclaves, and provided with a tube and stopcock communicating with an apparatus for exhausting the air. When the wood thus kept in vacuum is heated above 284 degrees F. the water and other volatile substances are given off first, and are drawn off by means of the exhausting apparatus, after which the heating is continued for about three hours. There then takes place a complex series of reactions and phenomena analogous to those that accompany the distillation of wood in a closed vessel, and in this wayy all the so-called pyrogenous products are separated; these in turn are drawn off, condensed, and separated so that they may be utilized commercially. There then remain in the receptacle only the fibrous skeleton of the wood and the mineral salts, which, taken together, constitute a fusible mass. This is allowed to cool slowly, out of contact with the air, and then placed in a second boiler which, after the air has been exhausted, is filled with nitrogen under a pressure of 1.5 to 2 atmospheres. The whole is heated to 1,500 degrees F. for two hours, and at the end of this time the wood is melted into a homogeneous, hard mass."

The melting process may also be performed, we are told, without drawing off the distillation products, resulting, in about two hours, in the formation of a solid amorphous mass of fused wood. Melted wood, the writer goes on to say, has an undoubted industrial future, as it has a fine grain, takes a high polish, and is hard and resistant.

It takes printing in readily and may be cleaned with potash, soda or turpentint.

It may also be easily cast and moulded into all sorts of shapes; and by adding preservatives to it during the melting process it may be rendered practically indestructible.

Ravages of the Mistletoe

It is reported that the common American mistletoe has attained such abundant growth in the southwest, especially along the southern border of the great arid region, as to be an actual pest to tree growth. It is a fortunate fact that this parasite thrives best in intense sunlight, for in that way its harmful growth is limited to trees leading isolated lives. As a consequence. the damage to forest growth is negligible, as there the moist shady conditions force its successful germination to the topmost branches of tall specimens; its ravages are confined almost wholly to shade trees.

This parasite is unique in that it has green foliage, and as a consequence merely steals undigested food of its host and not the elaborated product as is usually the case with parasites. The mistletoe seed is encased in a pasty substance which causes it to stick to any body on which it is deposited. Its germination seems to be general on all species of tree growth. To germinate, the seed must fall in some wound in the bark of its host and with this start the dissolvant enzyme contained in the root tips soon forces a channel to the vitals of the tree. Once well established it is only a question of time when the growth will sap the life, first of the limb on which it lives and then, if the growth is abundant, of the whole tree.

Announcement is made by the Union Pacific that all future orders for passenger equipment will be for steel cars. Recently these cars have been given a trial by the road, which has decided to do away entirely with wooden cars. Extensive orders for new steel cars already have been placed.

In adopting this poliiy officials of the road declare that it is merely in line with the general policy to do away with equipment which is susceptible to easy destruction in wrecks or fires. The new steel cars, it is claimed, will afford greater comfort to passengers.

Review of Current Trade Conditions

Ontario

There is a fair amount of business being transacted throughout Ontario and in some qcarters a decided improvement is reported. Many of the wholesale dealers are looking for higher prices, especially for good lumber, but no marked advance is expected for the lower grades until such time as the manufacturing establishments increase their demand for boxes, crates, etc. There is rather a difference of opinion regarding the conditions prevailing in the Georgian Bay district. Some reports indicate that the mill men will have difficulty in getting out their full cut of logs, as the cold weather has practically come to an end. Other manufacturers, however, who have recently visited the camps, state that all the logs will be got out and that the log crop will be a large one. The probability is that this is the case, but that securing the logs will be somewhat more expensive this year than last, as a result of the unfavorable weather. Among the retailers there is some anxiety apparent to make contracts for good lumber for this year's delivery. This applies to Ontario, while in the northern States there has been in the past fortnight, something of a reduction in the activity of the lumber markets. Prices generally are unchanged, with, if anything, a slight tendency towards stiffening, for hemlock and for shingles.

At Ottawa the upper grades of white pine are firm and apparently the United States buyers are closing contracts subject to a settlement of the tariff. Lumber manufactcrers are asking from 10 to 15 per cent. more for their product than at this time last year. Good sidings are selling at from $47 to $50 per M , stocks of the better grades are somewhat low. No. 1 dressing sidings are also scarce and the prices firm at $35. Red pine is firm, selling as high as $20 for 1½-inch stock. Box lumber is also slightly improved. Dead culls continue strong, especially for the 1-inch. Shipping culls are in fair demand. No. 1 lath are also selling well, and No 2 are scarce. Both pine and spruce are somewhat firm. There is a strong demand for railway ties, the 6-inch standard tie is selling at 45 and 50 cents.

Eastern Canada.

There is now considerable activity in the logging business of New Brunswick. Favorable weather prevailed during the past fortnight, enabling operators to overcome some of the trouble which they had experienced during much of the winter in connection with getting out their logs. There is practically no manufacture in progress at St. John, and will be none during the present month. Manufacturing, generally, will not be resumed until the middle of April, which is the usual period for the melting of the ice. The first of the up-river logs are expected during May.

Winter liner shipments were light during February. St. John trade in English deals is quite promising. Much active business is expected shortly and stiffer prices are clearly indicated. The values at present are strong and all the deals offering are sold readily. St. John offerings will be smaller than in previous years, owing to the late starting up of the mills. The stocks of English spruce deals at St. John are light, amounting to about 4,000,000 superficial feet. The price varies from $15.25 to $15.75 per M. superficial feet on the customary specifications. One-inch merchantable spruce boards are fairly active and have been shipped extensively during the past month, with prices steady. An improvement is looked for, however, in the New England markets, which is expected to stiffen the price of spruce boards. The dutiable article is now selling at from $12 to $12.50 per M. superficial feet. *

There is little change to note in the price for eastern spruce at Boston, the general price asked for frames is $23, some business is reported at $22.50, and in other cases as high as $23.50 is being asked. Random is only steady. Spruce boards are in moderate demand and steady. Matched spruce boards are reported tc be selling at $21.50 to $22 and covering boards at $19. There is an encouraging amount of business in spruce at New York and prices are well maintained. Stocks of shingles and lath at Boston are fairly plentiful and prices are inclined to be easier. The best cedar extras are quoted at $3.40 and $3.50.

Western Canada

The outlook for business in British Columbia is excellent and manufacturers are expecting that 1910 will be one of the most prosperous years they have ever had. The coast mills are well stocked with orders, but it is believed that the prairie yard men are holding back in the hope of a slight reduction of prices in the spring. This, the manufacturers say, is a mistaken policy. The shingle situation is being rapidly improved by the better conditions of trade generally. It is difficult to point to any particular factor that is bringing about the improvement in shingles, but credit must be given to the wisdom of a number of manufacturers who helped to reduce the surplus stocks by closing down their mills.

Great Britain

No improvement in the demand for lumber at London has occurred during the past fortnight.. The weather and the political uncertainty have been greatly against any improvement in business. Prices generally however, are well maintained. At Churchill & Sim's recent auction sale, 5th quality Quebec spruce sold at £8. 3 x 7 unsorted brought £8 10s.

At Liverpool, the political disturbance which prevails has not had the effect which was expected in the direction of interfering with trade. Pine and spruce deals continue very firm and stocks are low comparatively speaking. In spruce, a shortage in stocks is particularly noticeable among the favorite sizes, which, of course, is natural at this time of the year. Spruce shipments by liners from St. John and Halifax are arriving in small quantities. They are finding ready sale upon c.i.f. terms at about £8 2s. 6d., for specifications consisting of 65 to 70 per cent. of 3 x 7 and 8-inch, balance wider. The market for pitch pine at Liverpool is steady but there is very little business being done.

At Manchester, there is practically nothing fresh to note, though what movement there has been is, if anything, indicative of improvement. All wood goods are scarce and dearer, practically without exception. Best quality pine sidings, especially in 1-inch, are in excellent demand and have advanced materially in price during the last month or two.

United States.

There has been a decided awakening in the lumber trade at Chicago during the past fortnight as a result largely of the return of favorable weather, the demand for northern pine is active and the indications for spring trade continue very encouraging Prices are reported to have advanced from $3 to $5 on shop and better, while sales of No. 2 are reported at $1 higher than was obtained a short time ago. Nos. 3 and 4 boards, however, are somewhat lower. The hardwood market at Chicago also shows great activity, there being quite a revival of large contracts for future supplies. Maple and birch are still the leaders among northern hardwoods. Rock elm is steady and basswood is unchanged. Plain red oak remains strong, and quarter-sawed oak is advancing. White oak is selling well. Hemlock at Chicago is bringing higher prices as a result in the improvement in the yellow pine trade. The country trade is reviving and wholesalers report that they are shipping out a lot of

hemlock. It is anticipated that the supply of western fir, spruce and hemlock may be somewhat curtailed this summer as a result of delays in delivery by the railroads. There is a little more stir in the demand for shingles at Chicago. Yard stocks are moving freely. Red cedar shingles are somewhat improved. Lath are still scarce and the demand is increasing.

Market Correspondence

White Pine Prices Firmer at Ottawa

Ottawa, March 10—Though many contracts for the summer's cut of lumber are in the process of making, local mill owners and dealers are much more absorbed in the deliberations going on over United States tariff relations than in price making. It is understood that many American buyers decline to close bargains unless subject to the action of the American tariff board on the maximum clause. Most of the local manufacturers say there is no need to worry for Americans cannot permanently shut out Canadian lumber. Prominent officers of the Canadian Lumbermen's Association advise the same independent attitude. Inquiry among the Ottawa lumber merchants by the "Canada Lumberman" representative, found that exporters to the British market were as much alarmed as any over the possible attitude of the United States, because if the product of the mills is barred from the United States enough lumber will be thrown on the British market to depress trade. Lumbermen are a unit in stating that any exclusion of their product from the American market could not last longer than a cocple of years, but some assert that even in that time prices would become seriously disturbed. But it is only conjecture with lumbermen, as with all others, as to what the President of the United States will do, and they all look upon the enforcement of the maximum tariff clause as of remote possibility. The tariff commissioners, Messrs. Pepper and Emery, who were in Ottawa conferring with the Government, left no inkling as to what they would say to the tariff board when they returned. They told all inquirers outside of official circles that their mission was one of investigation, and they left the impression that they were not clothed with power to ask or grant tariff concessions. A visit of the two United States tariff delegates to the lumber and pulp mills of J. R. Booth at the Chaudiere, indicates that the lumber and pulp question is occupying a prominent place in their investigation. While Ottawa lumbermen are intensely interested in these negotiations, it would be an error to give the impression that any of them are fearful of the results or are bothered by anything more than the uncertainty created by having the tariff rates so much of an uncertainty.

The circumstance of upper grades of white pine growing firmer in price at the Ottawa valley mills every day seems to confirm reports that United States buyers are closing contracts subject to the settlement of the tariff issue. Otherwise they would shrink from paying such high prices. The faith Ottawa manufacturers have in the outlook for a friendly settlement of the tariff is reflected in their general demand of 10 or 15 per cent. more for lumber than last year. Pine good sidings, one-inch x seven and up, are quoted at from $47 to $50 per thousand. Sales for especially sorted stock have been made as high as $53. It is not always easy to get full orders of the upper grades of pine even at the advancing prices quoted in the "Canada Lumberman." These stocks are low. Most of the sales are made nearer the maximum of the price list than the minimum. A very small margin would be needed to include all the prices of the high class stock, were it not for the low standard of grading in some of the mills.

No. 1 dressing sidings are nearly as scarce as the "good" variety and the market is firm at $35 per thousand. Contracts were closed recently in Pembroke at this figure, and it does not appear that there is much more in the Ottawa valley to be sold. Red pine is firmer than heretofore, and 1½-inch stock sold as high as $20 per thousand. There was also a slight improvement in the better class of box lumber. The firm market reported last month for dead culls continues and the demand is especially strong for one-inch. A brisk demand was noted at Booth's for shipping culls and better. The stock was bought for remanufacture into sash and doors. In fact, "cut ups" are at a premium. In the same quarter the demand for No 1 lath is strong and No. 2 is much scarcer than earlier in the winter Both pine and spruce lath went up a little and manufacturers are looking for further advances.

The brisk trade in material for sash, door and furniture factories is manifest in some importations of poplar to be used in manufacture of furniture and office fittings. The stock comes in free of duty in the rough state. Some choice stock bought this month in Boston in sizes 4 x 5 inches, was imported at $50 per thousand.

Many dealers are awaiting with interest for the final announcement of J. R. Booth's prices. The "Canada Lumberman" learned that while the prices were not finally determined, the contracts might be closed any day and a standard be fixed for the summer. There is not much doubt that the figures will be 10 or 15 per cent. in advance of last year for the higher grades of white pine. This will be in keeping with the increased price for first and second quality of deals sold to British buyers a few months ago. Mr. Booth's operations in the mill during the coming summer promise to be extensive, if not hindered by floods. Like most of the Ottawa valley manufacturers, his cut in the shanties was curtailed slightly, but he has enough logs in the streams to keep the sawmill going without drawing on the past winter's cut. In addition. 100,000 logs came down from Madawaska by train, which will be used in the mill as soon as the gum dries out of them. The usual quantity of ties will be made, but no telegraph poles. The demand for ties is strong and the standard railway tie, 6 inches, is firm at 45 to 50 cents each.

The portion of the Bryson estate limits at Fort Coulonge which had been advertised for sale for some time, is reported sold to the Papineauville Lumber Company, for $60,000. This will increase the operations at the Papineauville mills. Another sign of increased activity in the lower province is the erection of a $20,000 lumber mill near Aylmer, by McMaster Bros., of Kemptville.

The lumber camps were handicapped all winter by lack of frost, and the heavy rainfalls of early March were a serious setback. There is fear that the freshets will escape too early to serve to the best advantage in carrying out the logs. The snowfall measured at one Ottawa valley point was 22¼ inches in February, 1910, as compared with 16¼ in February of the previous year. The mild weather of the present season, however, has reduced the snow and ice available for water supply and the prospects are for a lighter flow of water than last year. No news of camps breaking up has yet reached the city.

Improved Logging Conditions in New Brunswick

St. John, N.B. March 9—The fortnight has been marked by great activity in logging circles in all parts of the province. Conditions have been more favorable than at any time during the winter and considerable progress has been made. At the same time, the season is advancing rapidly and, in nearly every case, lumbermen find their logging operations far behind what they figured would be the case at this date, when making plans last fall. The favorable conditions which have existed for the past two or three weeks have proved a great boon and a continuance of such conditions is hoped for. In northern New Brunswick and that portion of Quebec province which borders upon the headwaters of the St. John river and the Restigouche, there have been very heavy falls of snow and at some points along the St. John there is as much as four feet of snow. In the more southern portions of the province there is much less, the depth ranging from 15 inches to 2 feet, until a few days ago, when a heavy fall of rain reduced the quantity somewhat, although leaving enough for fairly good hauling on the logging roads.

Manufacturing is entirely at a standstill at present writing, all the local mills being closed down. This condition of affairs has existed for some weeks past and will continue during the present month at least. Practically all the spruce logs owned by local manufacturers are in the storage booms at South Bay, and at Milledgeville, and will not be available until the ice melts out, which usually occurs between the 12th and 20th of April. Until that time manufacturing will not be generally resumed and several of the mills will do little sawing until the first of the up-river logs arrive, which will be in May.

During the month of February shipments by the winter liners were moderately light, much of the goods coming from outside points. The largest shipment of spruce deals of the winter was that which went forward on the S.S. Manchester Importer, which shipment consisted of 1,087,751 superficial feet.

The local trade in English deals is marked by a tone of expectancy which has a decided leaning in the direction of optimism. Confidence in the early development of brisker business and higher prices is plainly and unmistakably indicated by the operations of local dealers. Present values are strong and have a tendency toward greater firmness and all the deals that are offering find ready sales. Offerings from local sources will be lighter than for several springs past, owing to the late starting of the local mills as mentioned above Receipts from outside points have been moderately heavy during the past month owing to the better conditions for moving lumber from inland points.

Local stocks of English spruce deals are moderately light, the total being between three and one-half and four millions of superficial feet. The local value of English spruce deals, in a specification containing say 50 per cent. sevens and eights, 35 per cent. nines and 15 per cent. elevens and wides, would be from $15.25 to $15.75 per thousand superficial feet.

The trade in one-inch merchantable spruce boards has shown considerable activity during the past month. Shipments have been heavy for this line of goods. Prices continue very uniform, although it is expected that the promised betterment in the New England markets will have the natural effect upon the local prices of spruce boards. The present local value on dutiable one-inch spruce boards is from $12 to $12.50 per thousand superficial feet.

Freight rates on long lumber to Boston Sound ports and New York respectively, are $2.50, $2.75 and $3 per thousand feet. This would mean 25c. per thousand on shingles to Boston and 60c. per thousand on lath to New York City.

Burns

A Lumberman from Ottawa Valley writes us as follows:

DEAR SIRS:

The Solid Tooth Saws I purchased from you last spring have been doing first class work ever since. I have never had any trouble with them. The Burns Saws are the best, as they are evenly tempered and will keep an edge longer than any other make of saw used here. Yours truly.

EDGINGS

Ontario

Claridge & Hillock, lumberers, South River, Ont., are stated to have assigned.

McMaster Bros., of Kemptville Ont., are erecting a $20,000 mill near Aylmer, Que.

The Colonial Wood Products Company have completed the erection of their pulp mill at Thorold, Ont.

The Georgian Bay Shook Mills, Midland, Ont., are considering the erection of an additional dry kiln.

The Sarjeant Company, of Barrie, dealers in lumber and building supplies, are opening a branch at Midland, Ont.

The first grinder has been started at the new pulp mill of the Colonial W. P. Pulp Company, Thessalon, Ont., and the first commercial pulp manufactured is pronounced to be of a very fine quality.

Hugh Baird & Sons, formerly of Markdale, now of Thornbury, Ont., are asking the town of Thornbury for a free site and exemption from taxation in return for which they propose to erect a sawmill. The timber in the district is maple, birch and rock elm.

The Victor Steel & Wood Products Company, Limited, Walkerville, Ont., have been incorporated with capital of $401,000. The incorporators are: J. H Flinn, attorney; N. G. Begle and Franklin T. Chapman, manufacturers, all of Detroit, Mich., and E. C. Kenning, barrister, Windsor, Ont.

The Pembroke Lumber Company have opened the ground to McClemmet's Depot, near Grand Lake on the south branch of the Petawawa, and are putting in 3,000 bushels of oats and 80 tons of hay. The company will have two lumber camps in operation in that neighborhood next season. One of the camps will be on Kennedy Bay and one on Karkajou Creek.

The Elmira Interior Woodwork Company, Limited, of Elmira, Ont., have been obliged to call a meeting of their creditors. In a letter to their creditors they state that this has been brought about as a result of lack of sufficient capital and by unexpected losses. The meeting will be held at Elmira on March 11th, when the company will make a statement of their affairs. They report that suitable arrangements have been made with the company's bank for advances for the future, providing that the present indebtedness can be satisfactorily arranged.

A deputation representing the Grand River Improvement Association waited upon the Ontario Minister of Public Works recently with a request that steps should be taken for the conservation and restoration of the forests at the head of the Grand River, so as to prevent the destructive floods which for years have been visiting the cities and towns along the river banks. The deputation was headed by the Hon. Clifford Sifton, chairman of the Conservation Commission. Hon. Dr. Reaeme assured them that the matter was one of provincial importance and that it would be brought to the attention of the Government.

Eastern Provinces

Letourneau & Camire, lumber merchants, d'Israeli, Que., have dissolved.

Leclair & Bourgue, lumber dealers, Ely, Que., are stated to have dissolved.

The Western Lumber Company, Montreal (Leon Gagne, jr.), have registered.

The Horwood Lumber Company, Limited, are making application to the New Brunswick Government for the use of two water powers running into Campbellton, Notre Dame Bay.

Mr. M. C. W. Kaye, of Belleisle Creek, N.B., is installing a new edger.

The sawmill of J. H. Gignac & Company, Quebec, was recently damaged by fire to the extent of about $70,000.

The lumber cut on the Miramichi for the present winter is estimated by Mr. W. B. Snowball at 50,000,000 feet, or 25 per cent. less than that of last year. There is a reduction in the cut all over the province as a result of the wet weather and the light snowfall.

The Bryson Estate, of Pontiac County, Que., have sold part of their central limits at Fort Coulonge to the Papineauville Lumber Company for the sum of $60,000. This property has been in possession of the Bryson Estate for half a century and has valuable timber. The new owners will bring the timber to their mills in Papineauville.

One of the largest lumber deals affecting the Eastern Townships has been concluded in Montreal. The Guelph Patent Cask Company, of Woking, Eng., bought out the timber limits and other property of the Great Northern Lumber Company, of Scotstown. The deal involves several thousand acres of timber limits, beside several large mills. The company will start operations soon.

Geo. W. Fowler, ex-M.P., has purchased at auction the property of the E. L. Wright Lumber Company, Limited, of Salisbury, N.B. The price paid was $45,000. The property includes 9,000 acres of granted lands, 18,000 acres of Government lands, and 500 acres of farm lands. The cruisers are reported to have estimated that the property was worth $80,000. The Wright Lumber Company is in liquidation.

A meeting of the members of the Canadian Wood Pulp Association was held recently in Montreal at which a discussion took place upon the discrimination in the freight rates on wood pulp and rossed or peeled wood shipped from Canada. It was claimed that the same rate should apply for both classes of freight as they were both raw material. It was decided to make representations upon the matter to the Board of Railway Commissioners.

The York & Sunbury Milling Company, Limited, of Gibson, N.B., have built an addition to their mill and installed therein a trimming machine for clipping lumber to exact lengths up to 24 feet long. The cylinder of their main engine has been rebored and fitted with new piston rings, its speed increased and the receiving pulley on line shaft enlarged, so as to maintain the same speed on the machines. The mill has been overhauled during the winter and is now in good condition for the season's run.

Stetson, Cutler & Company, who lease their mill on the Mispec river from

the city of St. John, N.B., did not make application for a renewal of the lease on March 1st, the last day for doing so according to the terms of the lease. Their present lease will run out on June 1st, and it is currently reported that they have decided not to operate the mill any more because of lack of water power from the river. The mill employs about 600 men and the situation therefore is rather a serious one. The city is looking into the possibility of increasing the power by means of storage dams, etc.

Many United States investors have recently been visiting Quebec province on the lookout for timber limits. Several deals are being negotiated, among them being one for the purchase of the seignorial timber holdings of Edmund Joly de Lotbiniere, by the Champion International Company, of Lawrence, Mass. Their limits are at Pointe au Plateau, on the south side of the St. Lawrence, about 25 miles above Quebec. The Champion International Company import annually about 1,500 cords of pulpwood from Canada for the manufacture of coated papers in the United States.

Western Canada

The Reliance Lumber Company have finished building a lumber shed and offices at Waldron, Sask.

T. K. Smith has purchased the Wyatt sawmill at Hullcar, B.C., and logging operations are in full swing.

Smith, Davidson & Wright have secured a 20-acre site on the Fraser river, near New Westminster, for a paper mill to employ 100 hands.

The B. C. Tie & Timber Company have been awarded $31,000 insurance on their claims in connection with the recent burning of their plant. $63,000 in all was claimed.

The B. C. Gazette gives notice of the incorporation of the following companies: Cedar Cove Sash & Door Company, Limited, capital, $15,000; Okanagan Lake Lumber Company, Limited, capital, $100,000.

Five years ago George Huscroft of Creston, staked out five timber limits on Sullivan Creek, and these claims, which were owned by Mr. Huscroft, G. M. Benny and I. J. Schermerhome, were recently purchased by W. H. Crawford for a considerable cash sum.

H. J. Rossi, of Idaho, acting for a party of Washington and Idaho capitalists, has completed a deal for some timber and lands in Cariboo, B.C., for which the price paid was over $100,000. It is the intention of the purchasers to erect sawmills and other industries and to develop both the timber and land properties.

M. Hutchinson, of Vancouver, has just completed negotiations for the sale of a timber tract on the mainland, 175 miles north of Vancouver, comprising 120 claims, the timber being chiefly fir, hemlock and cedar, and running 40,000 feet to the acre on an average. The amount of the purchase consideration exceeds $1,000,000.

Edward Brown, formerly of Portage la Prairie, paid $65,000 cash for all the unsold treasury stock of the North Star Lumber Company, which has valuable timber limits in the Kootenay and mill at Elko. The directors of this company are John Hanbury, Brandon; J A. M. Aikens, R. T. Riley, Andrew Kelly and W. A. Windatt, Winnipeg

The British Columbia Government has cancelled four timber licenses of J. S. Emerson and one of Mr. Mann, on the ground that logs were shipped to the American side contrary to law. Andrew Haslam, timber inspector, declared that after learning that the logs were to be shipped to Bellingham he put notices on the logs. He was carried off in a tug, but discovered that the timber was sent over just the same, some of the notices being still attached. The Government has decided to reopen Mr. Emerson's case and give him an opportunity of putting in a statement.

The Moresby Island Lumber Company, which recently secured an Australian contract to supply 10,000,000 feet of lumber, comprising spruce, cedar and hemlock, is having its mill at Queen Charlotte City thoroughly overhauled. A new plane has been installed, and the machine is in first class shape to turn out all kinds of dressed lumber. New concrete beds are being laid in the engine room, and a new truck for the carriage, and it is intended to tear down the blacksmith shop and build a new one. The company will also improve the port's shipping facilities, extending the present wharf 1,000 feet into the sea, so that vessels can be loaded on all conditions of the tide.

Trade Enquiries

The Dominion Government Trade and Commerce reports contain the following trade enquiries. Readers of the "Canada Lumberman" may obtain the names of enquirers by writing us, enclosing stamped envelope and stating number of enquiry:

284. Agency abroad—A manufacturers' agent in South Africa reports an extensive market for basswood planks of first quality.

296. Wheel stock—A Yorkshire firm largely interested in the sale of light wheel stock, such as rims, hubs, spokes, shafts and other bent timber, would consider particulars and prices from Canadian manufacturers.

327. Timber—An Irish firm of brokers and agents, with first class connection for over 24 years amongst other timber importers, is open for spruce in cargo or smaller lots, gang sawn for preference, either Quebec, Nova Scotia or New Brunswick shipments. Can guarantee large trade, mostly in following sizes, about 10-15 per cent. 3x11, 50-55 per cent. 3x9, 20-25 per cent. 3x7, 15-20 per cent. 3x6, with some 2x4-inch thick, also take large lots of scantlings, say about 60 per cent. 1½x4½, 20 per cent. 2x4½, 10 per cent. each in 1½ and 2-inch x 5½-inch, and an average length from New Brunswick district of about 14-14½ feet, and from the other districts of 10 to 16 feet, mostly 12 feet. Also dressed flooring, etc., mostly 5 to 11-inch wide x 1-inch thick nominal planed one side and two edges, and in ceilings ½x4½-5-inch nominal planed R. & V., also T.G. & V-jointed. Could also do a large trade in spruce ends 2 feet and up to suit box factories.

328. Hardwoods—An Irish firm requires Canadian hardwoods, as oak for coffins, cabinet and wagon purposes. Maple flooring, beech flooring, hickory in logs and planks, birch logs, 16-18-inch, average prime rock elm logs about 40 cubic feet, also planks 2½-inch to 4-inch thick, ash logs and boards, walnut logs and boards, all in carload or mixed car lots.

336. Birch bars—A firm of timber brokers in the north of England are open to hear from a manufacturer or shipper in Canada of birch bars for spool and bobbin making. Sizes 2 to 4½ feet long, in 1, 1¼ and ½-inch squares.

369. Excelsior—A Liverpool firm would be pleased to receive samples and quotations from Canadian manufacturers of excelsior.

The Columbia Single-Blocker

THE WHOLE STORY

of the superiority of

Perkins Shingle Machines

is told in four words—MAXIMUM OUTPUT, MINIMUM EXPENSE. Our hand feed machines, Single, Double and Ten-Block, Shingle Machines will produce more and better shingles at less expense of operation than any other machines made. Write for catalog and proofs.

PERKINS & CO., Grand Rapids, Mich.

Shingle, Heading and Box Board Machinery

Its High Daily Average, its ability to always keep a surplus of logs skidded ahead for the leading crew is what places the

CLYDE SELF-PROPELLING STEAM SKIDDER

in a class by itself. Its absolute independence of the loader prevents any interference with its fullest skidding capacity at all times and its self propelling feature saves in both moving and skidding besides the expense of switching.

The Shearing or Shave Cut

Provided for in

The Shimer Cutter Head

does away with much friction produced by the straight cutter, the consequent burnt and blackened edges, the tendency to roll up fibers of the wood when operating on soft pine or green lumber. A larger per cent of No. 1 lumber can be graded from each batch run through your machine, thus saving lumber.

The Bits or Cutters on the Shimer Cutter Head are divided into upper and lower series from a central line of the cut, and are set upon seats inclined to give the leading points a perfect clearance, acting the same as a saw tooth when set. Each Cutter is seated to line up perfectly, presenting self clearing bit points to match any and every variety of knotty, cross-grained single tongue and groove flooring. Shimer Cutters being circular, carry the exact counterpart of the mould in the contour of the Bits. They retain their natural cutting positions on the Head, and being filed to suit a guage when sharpening, to agree with certain indicated lines and angles, they work as well after years of service as when new.

Made of Steel Forgings the Shimer Cutter Heads represent the greatest possible strength in compact and workmanlike manner. Strong and well proportioned in all the details of construction, they can be run at high speed and will stand a rapid feed.

We make Heads of every conceivable size and style to fit on your matcher or moulder. For your satisfaction we recommend a trial of 30 days, and if they do not prove to be the best Cutter Heads you have ever used, send them back.

SEE THAT YOU GET THE GENUINE

Look for the NAME and TRADE MARK **"The Shimer Cutter Head"** stamped on every Head we turn out. A dealer who would sell you an imitation means to deceive you—send them back and demand the genuine article with our guarantee for your protection.

Samuel J. Shimer & Sons,

Branch of Milton, Pa. **Galt, Ontario, Can.**

"QUALITY IS THE BEST POLICY"

Largest and Best Assorted Stock of Dry Spruce in Canada

The Steel we use.

STEEL IN DISSTON SAWS

The Steel we do not use.

Tensile strength of the steel in any Disston Saw in your mill —or the Disston Saws that are sure to be in your mill sooner or later—exceeds 200,000 pounds.

That is more than three times the tensile strength of steel considered perfectly safe for boiler construction.

The elastic limit of Disston Steel exceeds 160,000 pounds.

The largest and best crucible steel plant in the world for manufacture of saw steel is operated in the Disston establishment.

By the Disston Special Process of treatment from ingot to dies, the steel in Disston Saws is rendered absolutely uniform. It is the only steel in the world entirely free from "segregation," blow holes, sponginess, pipe or other physical defects.

Don't forget that a saw is only as strong as its weakest tooth.

If you are unable to obtain the DISSTON Brand, write us and we will see that you are properly supplied.

STRONG HEAVY SIMPLE DURABLE

OUR YG PLANER, MATCHER and **MOULDER** is especially designed, having in view the heavy demands made on modern machines, for fast, powerful feeding, combined with first class work.

No loose gears running on studs are found, on this machine. An important feature. Cylinders run in long extra heavy bearings. Moulding cylinder is heavily mounted and can be adjusted while Machine is running.

Matcher works of latest design, can be adjusted to any position on table.

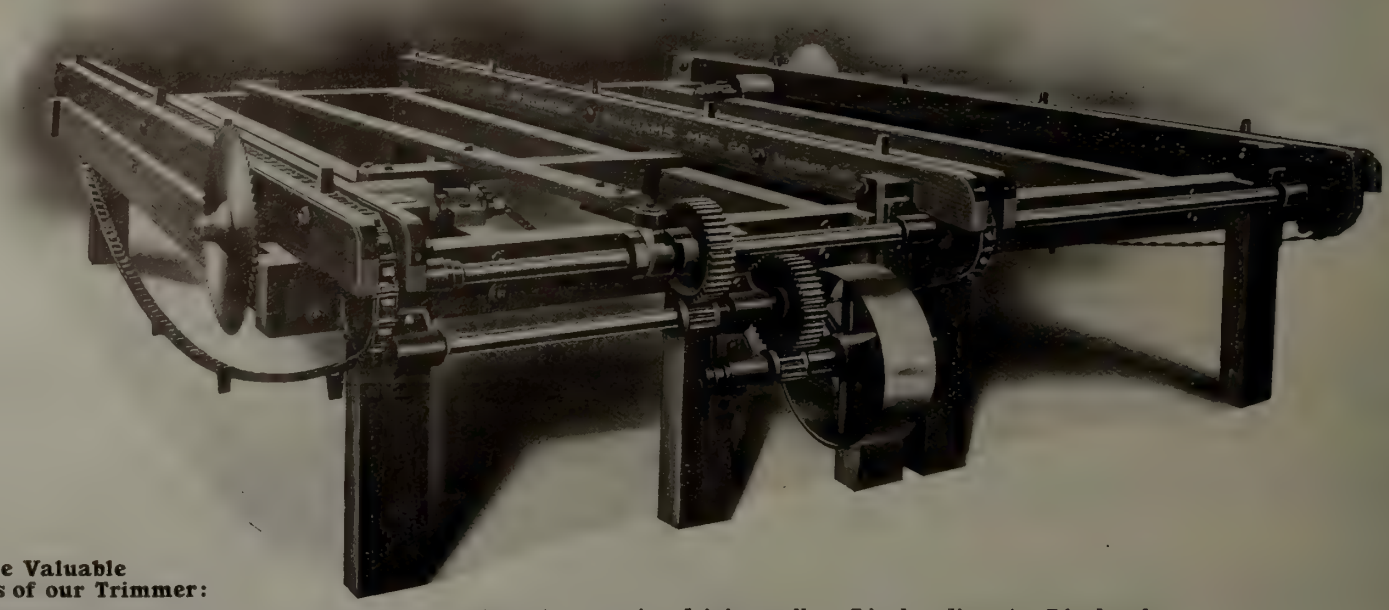
Our Patent **Truing Devices** applied to these machines, true to the knives so that each does its full share of the work.

REAR VIEW No. 107.

RESULTS ARE WHAT COUNT

A Combined Skidding and Loading Machine that will clear up the largest area at a setting and can be moved and set up in the shortest possible time will get the best results.



The latest Russel machine has some distinct features that save time and trouble, consequently money. Note the new method of suspending skidding sheaves. They are hung from a vertically hinged jib or triangle, the outer end of which is guyed by two lines one on each side, which are power-tightened and can be set while skidding lines are going out. The guy lines lead back so they do not interfere with skidding or loading. The uppermost leg of the jib has a spring connection to the tower, reducing shocks. All skidding strains are absorbed by the guy lines. The swinging boom is operated by wire ropes passing through sheaves suspended from a steel frame projecting from tower and leading to two drums on loading engine, controlled by one lever. Machine is raised or lowered by hydraulic or patented gear jacks. Built for 2 or 4 lines, with stiff or swinging boom, constructed entirely of steel, except loading boom. Is without question the strongest and fastest machine of the day.

RUSSEL WHEEL & FOUNDRY CO., DETROIT, MICH.

THIS TRIMMER IS A DANDY

A few of the Valuable Features of our Trimmer:

MANDRELS are one and one sixteenth inches in diameter carrying driving pulleys 7 inches diameter 7 inches face.
SAWS are 20 inches diameter, placed 12 feet apart. Speed, 1800 revolutions per minute.
FEED which is double geared, is very powerful and is stopped and started instantly by the operator with a clutch and lever as shown in cut.

See the Endless Chain Moving in Planed Ways in the Table ?

THIS CONSTITUTES OUR

EDGING DEVICE

which is driven by a sprocket chain and gearing from the same shaft that runs the feed rolls, thereby carrying the stock straight across the table, leaving a true, straight edge.

If you want to use the machine, just as a Band Rip Saw, the movable chain adjusts slightly below the surface of the table, where it remains inactive and out of the way.

The above machine is called our **No. 202 Band Rip and Edging Saw.** It has all the well-known features found on all our late Band Sawing Machines, viz.: Solid Lower Wheel, Knife-Edge Straining Device, Square Form of Column, etc.

Capacity : Will rip material 24 inches wide and 12 inches thick.

Manufacturer of Logging Tools

Are Your Boilers Overloaded?

If so, your cut is not what it should be

What Disposition are You Making of Your Sawdust, etc.?

Why don't you run your mill with it?

Are You Burning Your Slabs, etc.?

Why not sell them instead?

The old reliable Gordon Hollow Blast Grate increases the efficiency of a boiler 25% to 50%; gives as good or better results with wet, green or frozen sawdust as a draft grate gives with dry wood; saves labor in firing; and is practically indestructible.

Sold on Approval. Thirty days' trial given. We pay the freight both ways, if rejected.

Adapted for either sawdust or slabs, for plain furnaces or Dutch ovens, and for any number of boilers, from one up.

No change in construction required.

Easy to install.

Can be fired on when the boiler is idle.

We will submit a proposal upon receipt of the following data:

How many boilers have you?

Have you furnaces or ovens?

What are the width and length of your grate surface or surfaces?

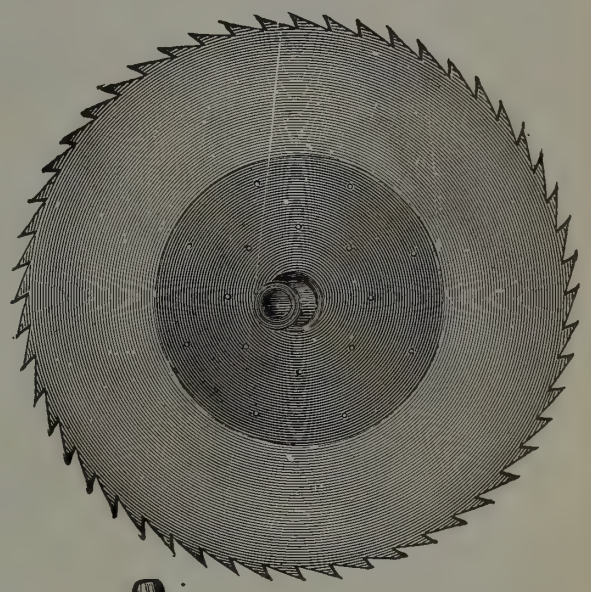
R. H. SMITH CO., Limited

St. Catharines, Ont.

We are the Sole Manufacturers of Saws under the **Simond's Process** in the Dominion of Canada

There is no process its equal for tempering circular saws. Other makers recognize this fact, as some of them, in order to sell their goods, claim to have the same process. **All such Claims are FALSE,** as the patentee in the U. S. and ourselves are the only firms in the world who use it.

INSERTED TOOTH SAWS

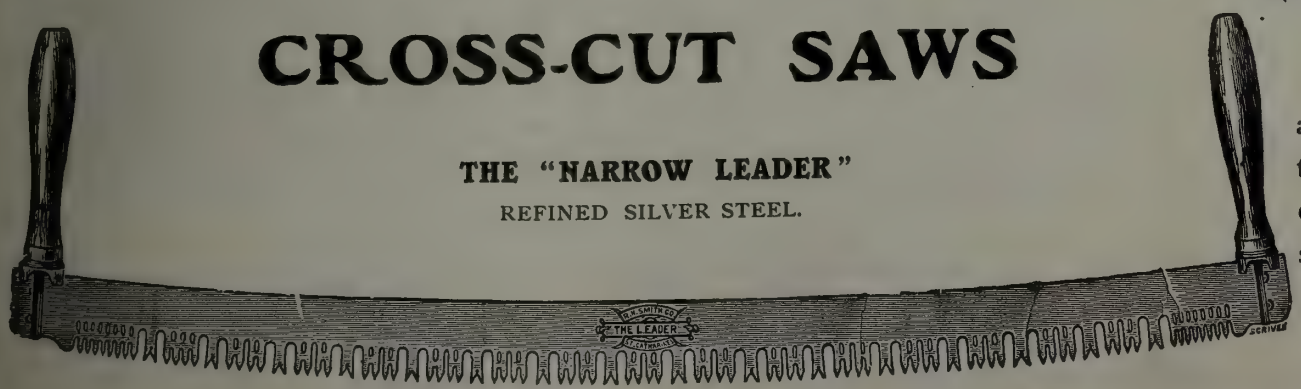


Notice the improved shank. We call particular attention to the swell which strengthens it at the weakest part and which gives it more wear than the old style.

Shanks made in usual gauges and to fit your saws perfectly.

SHINGLE SAWS

The quality of the "Simonds" Shingle Saws is proven by the fact that the largest shingle and machine manufacturers in Canada are using them.



Run a "Simonds" and you will increase your output.

CROSS-CUT SAWS

THE "NARROW LEADER"

REFINED SILVER STEEL.

The Simonds Temper and style of tooth make the "Leader" the fastest and easiest cutting saw manufactured.

The Highest Development of the present day.

LONG'S SAW MILL MACHINERY

Records for Cutting Capacity unsurpassed.

4 Saw Lath Bolter

We build a full line of Lath Machinery, and will be pleased to submit full particulars on application.

This machine speaks for itself.

Improved Hot Blast Grate

This is the latest production in the line of Hot Blast Grates. With this grate the blast is evenly distributed over the whole surface of the grate so that when sawdust is being used for fuel, it requires little if any attention, as it is evenly consumed.

This is not the case with other styles of Hot Blast Grates where the blast is not evenly distributed.

Our Hot Blast Grate develops more heat from green, wet or frozen sawdust or mill refuse than an ordinary draught grate develops from wood or coal. Increases steaming power of boiler 50 per cent. It will save you money regardless of the kind of fuel.

We will ship our Hot Blast Grates to any reliable person or firm on 30 days' trial, to be returned at our expense if not as represented.

SUITABILITY

You wouldn't file a saw with a manicure set—neither would you use a hand machine to edge 8 in. and 10 in. Cants.

If you are running light stock on a heavy edger, half your machine is idling—you are wasting floor space and you are not getting full returns for your investment. On the other hand, if your machine is too light for your work—you are forced to crowd it—your saws will heat and bind and your lumber will be snaky and uneven—you suffer in both cases.

We have had 60 years' experience as Canadian Saw Mill Builders. We manufacture a complete line of Edgers—hand, light, medium and heavy style—varying in size from 30 in. to 96 in. opening. No matter what stock you are handling, we have the Edgers—in style and size—most suitable for your work. Our Bulletins on Request.

Mostly Choice White Pine.

Pine Doors

We have long appreciated the fact that price is not the only requisite a dealer must seek in placing his order for doors. Poorly manufactured doors can scarcely be considered a bargain at any price.

Door Making is our Specialty

We have equipped our plant with the best door machinery made, and we are turning out doors that **are right in quality and right in price.**

Our doors need no commendation. They prove themselves. They are business builders for every dealer who handles them.

If you have not received our latest quotations on Doors, Sash, and Interior Trim, write us to put you on our mailing list. It will be mutually advantageous.

THE EXCELLENCE OF DISSTON SAWS

IS A MONUMENT TO SEVENTY YEARS OF PROGRESS

Henry Disston, founder of the great Disston industry, was a man with an ideal. He wanted to perfect a tool which would represent the best attainment in the artisanship of that day. That was his first thought. If the acquirement of property had a place in his mind, it was second place.

Yet through doing one thing better than any other man could do it, he built a business that has to-day grown to proportions of which he never dreamed.

This success, founded upon striving for an ideal, would have been impossible had there been the slightest lessening of effort on the part of those who succeeded the founder or those who, in turn, succeeded them.

Every notable improvement in saw-making originated in the Disston establishment. From steel making to finished product, the best brains of the country has contributed, in every detail, their share.

No other saw is just like a Disston. No other saw is so well thought of. No other saw so well deserves that public patronage and trade-confidence which constitutes an impregnable monument to seventy years of consistent progress.

You'll get the Right Service out of a Planer, Matcher or Moulder if you put the Right Machine into Service

The Hespeler No. 56 Single Cylinder Planer and Matcher is right from the view point of both the buyer and the maker. It is of good design, medium priced, and heavy enough to meet all the requirements within its capacity.

The Hespeler No. 83 Four Sided Heavy Duty Moulder is the most substantial moulder on the market to-day. Some moulders cost more to buy, but none cost more to build.

Bulletins and prices on any woodworking machine you require will be promptly furnished on request.

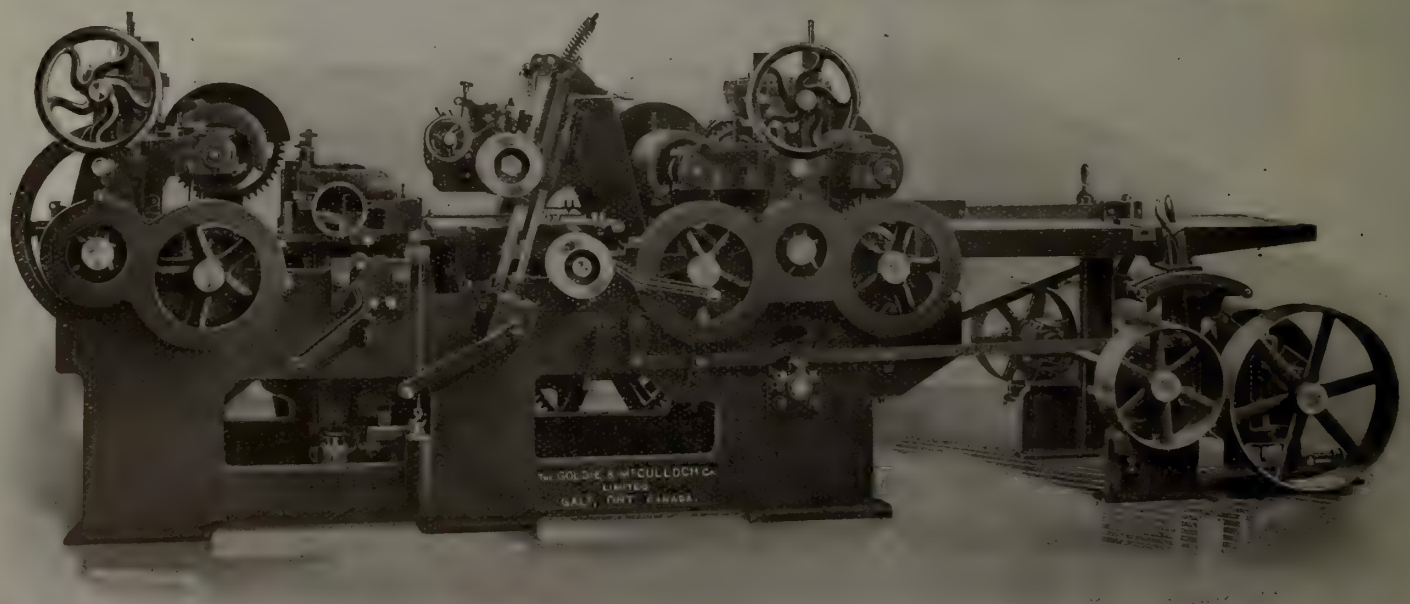
SIMONDS

Inserted Point Saws

Made in Montreal

Are you buying a new saw this winter? Then listen to what some other mill men say about the Simonds Saw. We quote from their letters. "As near perfection as one could be made for our mill." "Miles ahead of any other—would not take $100 in gold for it." "Our favorite saw in the mill." "First class, works fine." "Runs equally well winter or summer." "Your saws have proved the best I ever used." "It's the only saw I can get to stand up in frozen timber."

Some of our friends may be over enthusiastic, but there you have their own words. Isn't it enough to cause you to hesitate and learn more about the Simonds before buying any other make? Really he who uses this saw profits much more by it than do we in selling it. You have more to gain than we.



An attractive little booklet fully describing these saws can be obtained by addressing our nearest office.

TERMS OF SUBSCRIPTION:

Canada, United States and Great Britain, $2.00 per year, in advance; other foreign countries embraced in the General Postal Union, $3.00.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For Manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Vol. 30 Toronto, April, 1, 1910 No. 7

Overweight Lumber Freight Charges

The inquiries which have recently been made in many countries about the increased cost of living have naturally been directed partly towards an inquiry into the advanced price of lumber. No one in the lumber industry for a minute expected that any inquiry would result in the discovery that there was in existence anything resembling a lumber trust, or an agreement among manufacturers to inflate prices. From time to time there have been inquiries into the existence of alleged lumber trusts, and they have all been abortive. There is one feature of the lumber industry which could reasonably be examined closely, and probably the result would be a discovery of one of the most prolific sources of increased cost, not only of lumber but of practically every article which enters into commerce. The grip which the railroads have upon the commerce of every nation is admittedly a serious evil. A single instance will serve to indicate how, through their freight charges, they are able to add materially to the cost of living and at the same time to secure profits which are not legally theirs. The actual freight rates set forth in the schedule of the railways are, in most cases, not very excessive, but in thousands of cases the scheduled freight rates are not the real basis of charge. By means of an elastic system of determining weights of freight, the railways are able to make charges very much according to their own inclination. In Canada, for instance, and we believe this applies equally to the United States, a shipment of merchandise, such for instance as lumber, is frequently made and upon arrival at its destination, the railway makes a guess at the weight and errs frequently upon the side of over-weight. The consignee accepts the shipment because he needs the goods, and also because in making payment of the freight he knows that the shipper will repay him the total freight charge. He is not concerned at all in the question whether the charge is excessive or not. If any claim is to be made for over-charge, it has to be done by the shipper, and it is then subjected to interminable delays on the part of the railway, so that in the end, even if the money is refunded, the expense to the shipper is largely increased.

The railway in this manner obtains money for the carriage of freight for which it is not entitled and for which it gives nothing in return. The cost of the material is thus increased, and in the end the consumer finds that the cost of living has been advanced enough to cover all such unfair charges. In fact, the system of business has everywhere now been adapted to this evil Beyond a doubt if it could be remedied there should be brought about a reduction all along the line of manufactured articles.

In the matter of lumber, as probably in the matter of every other manufactured article, there should be brought about an improvement if not a remedy of this evil, if an arrangement could be made to alter the relationship between the shippers and the consignee, if lumber were shipped at a "f.o.b." rate at the point of shipment the consignee would have to pay the freight and be responsible for it. He would take good care that the charge was correct before he made payment and the railway being anxious to deliver the freight and receive its money and also to recover its empty cars, would be careful to see that the freight charges were correct. Unfortunately, to-day lumber is shipped almost at a "delivered" rate and none of this checks upon the accuracy of the weight.

There is not enough recognition of mutual interests between the retailer and the wholesaler or manufacturer. It too frequently happens that the retailer becomes, to all practical purposes, a representative of the carrier instead of a representative of the shipper. This is a result of long established usage and it is a direct cause of the arrogant stand taken by the railways when claims for a refund are made to them. The railway companies realize that they are reasonably safe so far as the future is concerned, because they can generally depend upon the consignee paying the freight charges without question.

It would be otherwise if an arrangement were made to render the consignee more responsible for incorrect freight charges. Buyers of lumber could, without serious trouble to themselves, take such action as would relieve shippers of the necessity of fighting claims of this character. A little more interest in the welfare of the shipper would induce the buyer to protect his interests. In fact, when the buyer receives lumber and pays out another man's money for the freight, he should legally be held responsible for paying out only so much as the carrier is entitled to. The only way to bring this about would be to change the method of sale so as to have prices quoted f.o.b. at the place of shipment and have the freight charged to the buyer. This would do away with the unfair overcharges by the railways, the trade as a whole would be benefitted and the retailers would secure their stocks much cheaper.

Yellow Pine "Dumped" in Canada

An Ontario traveller for a lumber manufacturing firm recently called upon a large manufacturing company which use a great deal of lumber in the course of the year, and found that they needed a good sized bill of tank joists and timbers. He figured on the bill as closely as possible and told the manufacturer what it would cost. When the interview ended he felt fairly satisfied that he would secure the order. In the course of a few days he returned, expecting to close the contract, and found to his disappointment that a traveller for a southern pine concern had struck the trail of the consumer and had offered his goods at prices which cannot be approached by the Ontario mills. There was not a single item in the list on which the prices of the southern pine were not two or three dollars per thousand feet less than the prices of the Ontario mill and on many of the items the difference was as great as $15 per thousand feet. Tank joists, 4-inch x 16-inch x 24-foot, were offered in Ontario white pine, selected bill stuff, for $46. The southern pine price was $32. For 3-inch x 16-inch x22-foot the Ontario pine price was $44, and the southern pine price $31.50. For timbers, the prices were not so wide apart, an example being: 6-inch x 16-inch x 22-foot, for which the Ontario pine price was $39 and the southern pine price $32. It must be borne in mind, however, that the southern pine price was "delivered," while the Ontario price was f.o.b. mill, which means that another $2 or $3 would have to be added.

There is no possibility of talking against an argument of this nature and the Ontario traveller had to leave without an order, in spite of the

fact that the Canadian mills seemingly had the great advantage of a short freight haul. In spite of this, the southern firm was able to quote a lower price, freight included, than the Canadian manufacturer could quote f.o.b. cars at the mill.

Is the Canadian manufacturer asking too much for his lumber, or is the southern firm asking too little? Certainly the former is not the case. Canadians have lost enough money in the last two or three years to justify them in asking every cent they are asking to-day. The cost of manufacturing is sufficient to warrant the prices which are being quoted by Ontario mills. The trouble is that the southern manufacturers are making a convenience of the Canadian markets and are still at the old game of dumping their lumber here at almost any figure so long as they can secure money in return. They must have money to meet the demands of their bankers, and are selling lumber for anything they can obtain. There is no question that the southern pine is being "dumped" in Ontario. The price of 6-inch x 16-inch x 22-foot, for instance, was $32. The same material was sold in Boston recently at $38. With a $10 freight rate from the south, there would only be $22 of the Ontario price left for the cost at the mill, whereas in the south, an average price is $23.50.

This dumping, however, has been going on for many years, and one in the southern States being cut apparently at a wasteful rate, but in would expect that long before this time many of the southern manufacturers would have reached the end of their resources, or rather of their borrowing powers. This is the real puzzle in connection with the situation which Canadians are unable to solve. The best solution seems to be one which was recently given by a Canadian on his return from a trip through the south. He thinks that it is easier for a promoter to secure capital for doubtful enterprises in the States than in Canada. Apparently new capital is being interested from time to time, as the old capital goes out of existence, and it begins to look as if this process could be kept up almost indefinitely, especially if a fair living price is obtained in United States markets.

There are other features of the situation which are of interest to Canadians. Visitors to the South all agree in criticizing the enormous rate at which the lumber of that country is being cut, and they contradict the reports which are frequently published regarding a reduction of the quantity of timber being taken out. The Canadian referred to above, states that one of the most surprising sights of his trip was the great amount of lumber laden traffic which his train, going south from Chicago, passed on the way. Practically every ten miles a freight train was met, and over 50 per cent. of the freight was lumber. Not only is the lumber the manufacturing process there is far more waste than there is in other lumbering districts. The mills in the majority of cases are obliged to follow the timber. Large modern permanent mills are not erected. The machinery is not up-to-date, and the lumber is frequently unevenly cut.

Coming back to the Canadian end of the situation, one naturally wonders why it is that lumber which can be offered at such cheap prices compared with the Canadian product, does not completely monopolize the market. There is first of all one simple reason. A man who orders a bill of southern pine may get it in a few days, and he may not get it for months. Delivery is a very uncertain matter. If he orders Canadian lumber he can depend upon delivery within a reasonable time. It frequently happens that after ordering southern lumber a Canadian consumer secures some of it after a long delay, and in the end has to order Canadian lumber to take the place of the balance of the order which he cannot secure in time for his work. For this reason Canadians have been able in the long run to hold the sales of yellow pine down. The chief evil in connection with the sale of yellow pine in the Canadian markets is the disturbance which it introduces into trade conditions by providing a factor for the depression of prices and by acting as a general trade disturbing factor.

Lumbermen United in Opposition to Tariff Concessions

By the time this issue reaches its readers the tariff situation between Canada and the United States will have, in all probability, reached a definite stage and we shall know the worst or, let us hope, the best There are, at the time of writing, two very distinct features of the situation which are impressed upon those who are giving it study. The first is the extreme delicacy of the problem which President Taft, through the peculiarities of the Payne-Aldrich Tariff Act, has been obliged to solve, and the second—more important far, from a Canadian point of view—the imperative necessity for Canadians to persist to the end, in their demand that the Canadian Government shall refuse to make to the United States, any concession whatever, without an ample "quid pro quo" Throughout the first stage of the negotiations the Canadian Government has taken a firm stand and has been supported by Canadian public opinion from every quarter. But there will be a feeling of anxiety until the settlement is reached. There has been a note of uncertainty about the Government's stand, because of its disposition to consider the question of making any concession at all, even in return for concessions from the United States. In the past Canadians have felt that concessions made by the United States are more diplomatic than real. For this reason, only a complete and unquestionably satisfactory solution of the difficulty will relieve the anxiety in Canada. That there is anxiety in Canada regarding the result it would be useless to deny, but that anxiety is more concerned with an honorable settlement of the difficulty than with any fear of the commercial results of a tariff war.

If any argument were needed to show the feeling uppermost in Canadian ideas upon the tariff issue it would be readily found in the attitude taken by the lumber producing and selling interests of the country. Presumably no industry in Canada would be more seriously injured by tariff hostilities, yet the lumbermen of Canada, to a man, have supported the Government in the stand against making concessions to the United States. Over thirty million dollars worth of wood and manufactures of wood are exported annually to the United States, and from that country about nine millions worth are imported. If this trade were destroyed by a tariff war, the loss of the United States markets would be a serious matter to Canadian lumbermen. Readjustments would in a short time be possible and much of the lost trade could be compensated for in other quarters, but no one is desirous of meeting these difficulties. The attitude of the lumbermen of Canada therefore is one of firm loyalty and it should have great weight at Ottawa.

Similarly, the attitude of the lumber interests of the northern States is important. These people are largely dependent upon Canada for their supply of white pine. This wood is so universally used across the line that it has become an actual necessity. The lumbermen of the northern States have been urgent in their demands upon the President that he should not impose the maximum tariff upon Canadian products. Without Canadian white pine, thousands of United States citizens who are employed in the woodworking and allied industries would be deprived of employment.

Increased Exports of Canadian Spruce and Pine Deals

Details of the export trade in lumber, etc., for the nine months ending Dec. 31st, afford a number of interesting comparisons. The pine deal exports were valued as follows: 1909, $1,584,663, of which $1,494,104 was exported to Breat Britain, and $76,656 to the United States; 1908, $1,575,145, of which $1,504,708 was to the United Kingdom, and $55,033 to the United States. Accordingly, there was a slight falling off during the nine months in the exports to Great Britain and an extensive increase in the exports to the United States. The exports to the United States for the same nine months in 1907 amounted in value to $78,586, so that for 1909 the figures are not quite as great as for 1907. The exports of spruce deals for the same nine months in 1909 amounted in value to $5,806,769, of which $5,263,647 was to the United Kingdom and $493,504 to the United States. In 1908, the exports were $4,597,621, of which $4,181,894 was to the United Kingdom and $245,473 to the United States. There has therefore been in spruce deals a large increase both in the export to Great Britain and that to the United States,

in the latter case the total being exactly double. As compared with 1907, the exports of spruce deals to United Kingdom were about stationary, and to the United States they showed an increase of nearly $100,000.

The exports of planks and boards for the same period were valued at $19,701,837, of which $1,314,304 was to the United Kingdom and $15,102,249 to the United States. During the same period in 1908 the total was $16,161,811, of which $1,350,305 went to the United Kingdom and $12,545,450 to the United States. In the same period in 1907 the total was a little over $19,000,000, of which $14,000,000 went to the United States. The exports to the United Kingdom, therefore, have almost remained stationary during the last three years, while those to the United States fell off in 1908 but have more than recovered the difference during 1909.

The exports of shingles to the United States during the nine months ending with December, 1909, were valued at $2,010,325, as compared with $2,119,882 in 1908, and $2,285,068 in 1907, so that there has apparently been a slight decline during each of the past two years. The exports of wood for pulpwood during these months were as follows: 1909, $5,055,692; 1908, $3,659,424; 1907, $3,415,970. During 1909, therefore, there was a very considerable increase.

The total exports of unmanufactured wood for the nine months were as follows: 1909, $40,509,866; 1908, $33,463,964; 1907, $39,128,614. The portion of these exports going to the United States was as follows: 1909, $26,698,175; 1908, $22,105,404; 1907, $24,281,139. To the United Kingdom the values were as follows: 1909, 10,047,118; 1908, $8,681,497; 1907, $10,827,597. The exports to the United States have therefore increased materially during 1909, whereas to the United Kingdom, although they are greater than 1908, they show a slight decline as compared with 1907.

Among the exports of manufactures of wood, the most interesting article is wood pulp, for which the figures for the nine months are as follows: 1909, $3,799,324; 1908, $3,207,411; 1907, $3,174,335. The portion going to the United States were as follows: 1909, $2,954,280; 1908, $2,077,598; 1907, $2,775,551 During those nine months, therefore, the exports of pulpwood were about $1,250,000 greater in value than those of wood pulp.

The imports of wood and manufactures of wood during the nine months totalled $8,357,982 in 1909; $6,440,531 in 1908, and $10,977,597 in 1907. They show, therefore, an increase of about $2,000,000 for 1908 and a decrease of $2,600,000 as compared with 1907.

Editorial Short Lengths for Busy Readers

"In the lumber business there is great need of uniform grading and uniform prices. In the planing mill and factory work there is great need of uniform style and quality of production, and a uniform price list." These are the views of a correspondent of the "Canada Lumberman." It would be a difficult and probably dangerous thing to try to regulate prices, but uniformity of grades, quality and styles would probably go farther towards improving trade conditions and regulating prices than any other conceivable reform.

"It is within our power to resort to retaliatory measures that would mean Canada's commercial ruin. It is hoped, however, that it will be unnecessary to resort to such extremism, and that Canada will be amenable to the sense of equity and fair play." The above will be recognized as an example of the opinion of some uninformed citizen of the United States. It was published by a reputable journal, however, and to that extent represents a fairly general belief in the power of the United States to dictate terms to Canada. Fortunately few men of such ignorance ever get into Congress.

The acute stage of the negotiations in connection with the tariff between Canada and the United States resulted during the third week in March in the Board of General Appraisers in New York marking time in the matter of the duty to be levied upon wood pulp and pulpwood imported from Canada. The matter had come up as a result of the interpretation of the collector at Detroit, who had decided that the maximum rate should be imposed upon these Canadian products. The Treasury Department ruled subsequently that the maximum should apply to the Crown land product only. The International Paper Company appealed from the Detroit finding to the Board of General Appraisers. The Board decided to take no action until the tariff issue had been settled.

The reported solution of the tariff difficulty between the United States and Canada is welcome news to the lumber industry of Canada. No single industry in either country would have been so adversely affected by a tariff war as that of lumber, and the cloud which has been hanging over the trade for almost two years has now been dispersed. Lumbermen, however, in common with all others in Canada, will not be fully relieved until the solution has been worked out publicly and it is known that peace has been secured without any sacrifice of honor. The concessions to the United States will be regarded with suspicion until their effect is known. Canadian interests have been sacrificed to the United States so often in the past that further sacrifices will not be tolerated by a patient and long suffering public.

Before the Board of Railway Commissioners the Railway companies secured a ruling on March 15 which is quite in line with their general policy of milking the public whenever possible, no matter how small the stream. They applied for and obtained an increase in the charges for transit shipment charges from 25 cents per car per day to $1 per car per day. They saw in this an opportunity to add a tidy little sum to their profits without any additional cost and knowing that manufacturers and dealers were not agreed on the question, except with a reason, to meet little opposition. They also took good advantage of the opportunity to make themselves appear in the light of generous Samaritans by claiming that what they charge the $1 for, cost them in reality $2.30. It would tax them severely to prepare a reasonable statement showing how this $2.39 is made up.

English importers have been inclined during the winter to view the increased prices asked for Canadian lumber with doubt as to their being justified. The logic of conditions, however, is proving to them that the advances are sound. The London "Timber Trades Journal" of recent date says: "Quebec shippers have made some wholesale clearances of their stocks, and, from what we can learn, appear inclined to hold any balances for an advanced price in most lines, especially with regard to pine deals, sidings, etc. We understand that in hardwoods, whilst birch and rock elm have gone off satisfactorily, there was at first some stagnation in the oak market. The rather heavy stock wintering in Quebec made buyers nervous, but now it is seen that the quantity being manufactured will assuredly be so light, there is more disposition to buy. The very extraordinary expansion of railroad requirements in the United States is already affecting commodities in that market, and a change in the sawn oak position appears likely to occur with the improved demand. This, of course, will immediately affect oak timber."

The operations of the railroad companies of the United States reflect the general trade conditions of the country pretty accurately. They are additionally interesting to lumber manufacturers because of the large quantities of lumber they consume for new cars. Orders for new equipment for both passenger and freight service and inquiries by United States railroads for prices on further large amounts of equipment have lately reached such proportions that delivery cannot be made by the equipment companies for months to come.

Inquiries from railroads in all parts of the States reaching the car building companies within a recent period amount to between 20,000 and 25,000 cars, in addition to the cars for which orders have been placed. The figure named represents the new business on which the railroads and the equipment building companies are figuring at this time.

The greater freedom with which the railroads are buying indicates a feeling of greater confidence on the part of railway managers. Some of the western roads are reported in need of more rolling stock than they have in service, and the new York Central lines, it is said, could at this time profitably use 5,000 more freight cars, although delivery of several thousand cars has been made to these lines since the opening of the year.

The Forester's Value to the Lumberman

Second Article upon The Practical Application of Forestry Knowledge to Lumbering Operations — Estimating the Expense of Woods Work — By Dr. B. E. Fernow

We must accentuate what, of course, is well known to lumbermen, namely, that the lumberman's main expense is in the woods; that some 70 to 80 per cent. of the cost of lumber now, since stumpage values have come nearer to their true value, is spent in producing the logs. Here, therefore, should be employed the greatest intelligence in finance calculations. Here is where even the inexperienced forester, if given a chance, may usefully apply his academic knowledge. The question at what diameter to stop cutting down trees so as to make them still profitable is often asked. Where is the dividing line between profitable and unprofitable trees? What lumberman can give a well-based answer? Now, this is a problem worth while, for it means immediate dollars and cents.

There is no trick in finding it out, but it takes a systematic, intelligent analysis of the problem, for which most practical lumbermen have not the time or inclination, and which requires just the investigating spirit which is cultivated in the forestry student.

Here is a sample of his work, on this problem, which is contained in a modest and simple bulletin of the United States Forest Service, and which every logger should read and ponder over. It gives the results of an investigation into the grades and amount of lumber sawed from trees of different diameter of yellow poplar, yellow birch, sugar maple and beech. Since the three last mentioned species are our own, and the information has been gathered in the Adirondacks, where conditions correspond essentially to our own growth conditions in many localities, the information is directly applicable to much of our eastern conditions.

The data were secured by following the logs cut from measured trees—a sufficient number of each diameter class—from the woods through the mill. The data were collected in 1904, and prices then ruling were used. The lumber was cut into 5/4-inch boards, except that from the 8-foot and 16-foot birch and maple logs the heart was cut into railroad ties, by which a part, which would otherwise be principally culls and make a smaller output, becomes more valuable. The mill practice (at a spruce mill) was not very efficient, and the logs not in best condition. Hence, the results are below the average condition ordinarily attainable in a band mill sawing hardwoods. The inspection rules of the National Hardwood Lumber Association were used.

In each diameter class a number of trees, varying between 16 to 57 were carefully tallied and the actual amounts and grades sawed at the mill noted.

The prices then prevailing at the mill were: Birch, firsts and seconds, $23 ($33 for red); No. 1 common, $14; shipping culls, $8; mill culls, $6. Maple, for the same grades, $20, $14, $8 and $6; and beech, $14, $10, $7, $6. Railroad ties were figured at 40 cents, or $9.52 per thousand feet board measure

From the elaborate tables we select the following data: Table I. gives the amount and in parenthesis the per cent. of grades cut from trees of different diameters, the diameters being measured breast high.

From these data it appears that birch grows longer in quality with increase of size, than the other two species, for while at 24-inch, maple furnishes the same percentage of high grade lumber as the birch, namely, 34 per cent., the birch continues still for another two inches to improve at the rate of 2 per cent., while the rate in maple has sunk to 1 per cent.

With this table and the given prices for the different grades, it is at once possible to calculate the gross lumber value of any tree of given diameter in the following table, namely by multiplying the amount of each grade by its price, and adding up.

TABLE II.

Diameter breast-high	Value per tree. Yellow birch.	Sugar maple.	Beech	Per thousand board feet. Yellow birch.	Sugar maple.	Beech
14 inches	$ .89	$1.17	$1.00	$ 9.37	$ 9.83	$8.70

25 inches	6.39	5.30	....	14.95	12.93	....
26 inches	7.15	5.62	....	16.48	13.07	....
27 inches	8.03	5.90	....	17.09	13.26	....
28 inches	8.80	6.07	....	17.43	13.58	....
29 inches	9.57	....	....	17.56	.....	....
30 inches	10.34	....	....	17.59	.....	....

The columns per thousand board feet are secured by multiplying the contents of the tree (last column of Table I) with the ascertained average value per tree, and really represents the quality increment. With each increase in size, the relative amount of better grade material increases, and hence, the average value per thousand feet increases. In birch, this increase is small from 14 to 15 inches, but from 15 to 26 inches it rises at an average rate of nearly 5 per cent., then it sinks, and when the 30-inch diameter is reached there is no more increase. Indeed, probably before, decay has set in. In maple, the quality increment averages only 2½ per cent. per inch, and in beech hardly 1½ per cent.

The "Per Tree" column combines volume and quality increment, and represents the value increment. This, up to 18-inch for both birch and maple, proceeds at the average rate of 11.5 per cent. from inch to inch, and as it takes from 12 to 13 years under ordinary conditions to make that inch, and 7 to 8 years under favorable conditions, the value increment of trees of 14 inches is hardly more than 1 per cent. per year, that is to say, with present lumber prices they are over-ripe. Indeed, these lumber prices are much too low, if they are to pay for cost of production, i.e., for growing the wood itself, as we may show on some other occasion. Indeed, it does not pay to cut all trees down to 14 inches, as the following calculation will show, for which a forestry student can collect the necessary information.

By a count on sample areas, as referred to in the former article, he will establish the number of trees of different diameter classes occurring on a timber limit per acre on the average.

Such a count on well stocked hardwood areas in the Adirondacks and in our own northern hardwoods under certain conditions, might give about the following results per acre (Stand Table):

							Total trees
Diameter, breast-high,inches	14	16	18	20	22	24	11
Birch, number	2	3	2	2	1	1	11
Maple, number	2	1	1	1	..	..	5
Beech, number	6	4	3	2	1	1	17
Totals	10	8	6	5	2	2	33

By applying the values per tree (Table II.) he will determine the participation of each class in the total value per acre, and by applying

the contents per tree (Table I) to the Stand Table, he determines the yield of each diameter class, as in Table III.

The values of the different diameter classes and their contents would be found to be:

Diameter breast-high, inches	14	16	18	20	22	24
Birch	$1.78	$4.56	$4.26	$6.12	$4.51	$5.80
Maple	7.02	6.72	6.90	6.04	4.01	4.92
Beech	2.00	1.50	1.95	2.60	....	....
Value of each class	$10.80	$12.78	$13.11	$14.76	$8.52	$10.72
Volume of each class, bd. ft.	1134	1253	1204	1285	650	770

The log values of each diameter class being thus figured out and compared with the average logging expense, one sees whether it is still possible to log it profitably, and what the profit is per acre and per thousand feet.

With a cost of $10 per thousand feet for the operation from stump to lumber pile, the 14-inch class, producing 1,134 feet, hence occasioning a cost of $11.34, does not pay for its removal, for its value is only $10.80. The 16-inch class, costing $12.53, leaves a margin of 25 cents; the 18-inch class leaves a margin of 1.07 cents; the 20-inch class $1.91, and so on. If cutting down to 14-inch the 6,296 feet per acre produced would leave a margin of $7.53 per acre; if cutting to 16 inches, the result would be $8.07; if to 18-inch, $7.82; if to 20-inch, $6.95. Hence the most profitable cut would be to 16 inches, unless other than immediate financial considerations make the removal of the 14-inch class desirable. The lumberman knows exactly where he stands financially on the operation.

This example will show how a forester approaches the subject of logging, not being satisfied with old fixed notions that have grown up in the bush as to what pays and what does not pay; and even forestry students just graduated can work out such problems as these, if given a chance.

Ontario's Woods and Forests Revenue

Report of The Minister for Ten Months of 1909—Timber Trade Shown to have Improved Materially—Forest Rangers' Effective Operations

The report of the Minister of Lands, Forests and Mines of Ontario tor the ten months ending Oct. 31, 1909, has been presented. Referring to woods and forests, the report says in part:

"The total revenue from woods and forests for ten months was $885,892.44, consisting of: Bonus, $285,571.41; timber dues, $529,422.50; ground rent, $68,528.53; transfer fees, $2,370. The revenue from timber dues, being for ten months only, ending 31st October, is small as compared with amounts appearing in previous reports. The explanation is that the accounts for the previous season's cutting were not collected, as they do not accrue due until the 1st December following the winter in which the cutting took place. The bonus consists of deposits made on account of the sale held in the month of September." Referring to the timber sale held on Sept. 15th last, the report says: "The sale was very successful, in that good prices were obtained, much beyond what was expected in many instances. The damaged timber is now being cut so that the fire loss will not be large."

"The lumber trade is in a better condition because there is an increased demand and an advance in prices. What effect the tariff legislation of the United States will have when applied remains to be seen. The output of the season of 1909-10 is estimated to be from sixty to one hundred millions in excess of the previous year."

Dealing with fire ranging the report says in part: "It is a testimony to the good effect of the service on licensed lands that very few fires are reported as having been caused by clearing of land by settlers."

"In the Mississaga forest reserve, as well as in the Temiskaming forest, fires occurred. The quantity of timber damaged in the Mississaga would probably be 75,000,000 feet. As the fire ran in streaks, it was necessary to sell the green timber interspersed through the burnt. There were a few fires in the Temagami reserve, which damaged small quantities of red and white pine of the Crown, and spruce and jack pine, the property of the pulp concessionaire. The quantity of pine was offered for sale and is being cut this winter. It is expected between two and three million feet will have to be cut. It was impossible to establish the origin of the fire or bring it home to any particular person."

"Until quite recently the great pulpwood forest lying on the height of land and extending on both sides, has been quite safe from danger,

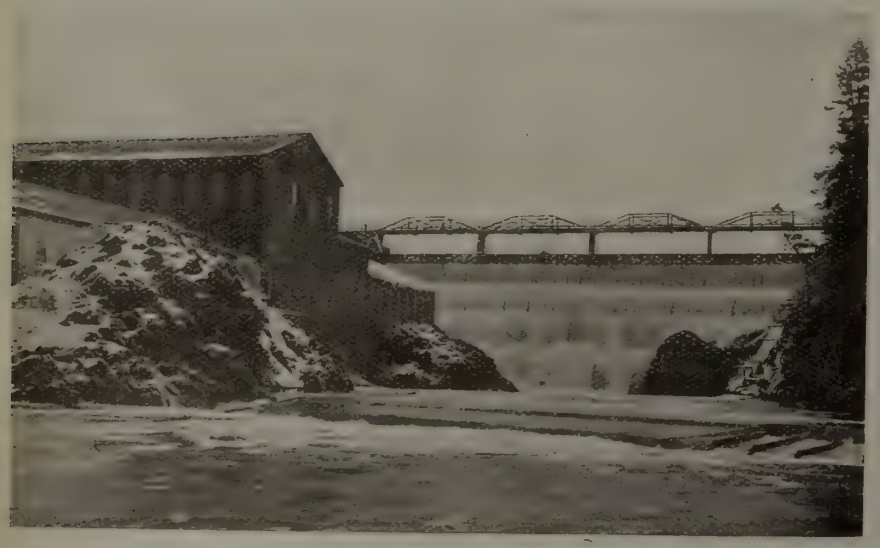
there being no dangerous element there. Now the region has been pierced by the Transcontinental Railway from one end to the other, thousands of men being employed, a large proportion of whom are foreigners without any knowledge of our laws or efforts to preserve the forests from destruction, and caring nothing whether it is burnt up so long as they can use fire to suit their object. They have no interest in or care for public property. This makes the whole line of construction a menace to the forests on each side of it. Not only so, but tote roads are built which are veritable lines of danger to the forests on each side. The province is not responsible for this danger, as the railway builds under Dominion legislation, and we cannot enforce our legislation with respect to efficient protection. It was hoped, as the danger was caused by the construction under the Dominion Government, that in common with other railways they would bear a share of the expense of fire protection, but so far no contribution has been made.

"The fire ranging on licensed territory, as heretofore, has been conducted by men selected by the timber licensees. The work has been efficiently performed and continues to give satisfaction to the limit holders. The number of rangers on forest reserves was 185, and the cost was $65,992.22. The number on railways was 187, and the cost was $66,712.49. The number on licensed lands was 450, costing $66,114.71. The railways refund the expense, except the Transcontinental, which contributes nothing. The licensees pay half the expense of fire ranging on their limits."

"The revenue collected during the ten months was divided as follows: Western collections at Department, $791,127.03; western collections at Quebec, $36,666.78; Belleville collections, $7,545.96; Ottawa collections, $56,552.67; total, $885,892.44."

The following tables show the quantity of timber cut and the amounts accrued from timber dues, ground rent and bonus during the ten months ending October 31, 1909:

Reports of the work of a number of the Department's land surveyors are contained in the report, and several interesting references are made to the timber resources. Chief among these is a report upon the timber in the Mississaga forest reserve. Surveyor J. S. Dobie in his report says in part: "There is a very large amount of valuable timber within the limits of the survey. There are some large burnt areas resulting from fires which apparently swept the country about twelve or fifteen years ago, but taken as a whole, the country is largely a virgin forest.



"The first base line, east of the meridian line, runs through continuous green timber. Spruce, balsam, birch, etc., are the prevailing varieties, and the white pine is of enormous value. On this line white pine of good quality is nearly always to be seen, and appears to extend for a long distance both north and south of the line. This is the best timber area encountered during the season. West of the first meridian the line runs through a forest of spruce, birch, balsam, cedar, etc., with considerable white pine throughout as far as the eleventh mile. Here a small area of brule is crossed and then green timber continues as far as the end of the line. From the eleventh mile west there is not so much pine visible from the line, but more hardwood is seen than on any of the other lines. There is some very good pine between the seventeenth and the twenty-first miles, but from the twenty-first to the twenty-fourth mile the line runs through a series of hardwood ridges. The timber on these ridges is maple and yellow birch, but the quality is poor.

"East of the first meridian the second base line runs through a green area with spruce, balsam and jack pine predominating. There is considerable white pine scattered throughout, but the white pine is not so plentiful as on the lines further south. The best white pine occurs between the tenth and twelfth miles."

Practical Economics in Saw-milling

Modern Methods used by Campbell Lumber Co., for Utilizing Every Inch of its Raw Material

The accompanying illustrations are of the mills and property of the Campbell Lumber Company, Limited, Weymouth Bridge, N.S. One illustration gives an idea of the lower mill and the other shows the upper mill and the falls at which the company intend to erect their electric plant. As previously stated in the "Canada Lumberman," this company are putting into operation the most economic methods possible in connection with their work. In the first instance, they have a band saw installed in one side of the mill which makes very much less kerf than the old fashioned rotary. At the end of the mill they have a carrier which takes all the slabs direct from the sawmill into the barking room, where the bark is taken off by a special holding device. The operator

The Campbell Lumber Co., Weymouth, N.S.—The Lower Pulp Mill Falls

uses this device, instead of turning the large slabs into lath, where a lot of material is wasted in sawdust, boltings and edgings. By manufacturing the slab into pulp it is possible for the company to utilize the whole block.

The new apparatus which the company intend to install at their pulp mill will include electrical direct drives on all the machines, to save belting, oil, shafting, etc., in order to economize in production; also a sliver grinder and a pneumatic save-all, so as to utilize every bit of waste that is encountered in pulp mills. The electric power is to be secured from the upper pulp mill, which is six miles away. By this means it will be possible to run the plant the whole year round. During the dry season one line of grinders will be run by electricity and the other by water power from the same water that drives the generator at the upper mill In other words, the water will be used twice over for power.

The company also intend to provide electric light for the neighboring town with the surplus current which they estimate to be able to procure

The Campbell Lumber Co., Weymouth, N.S.—Vessels Loading at Pier No. 5

from their upper mill. In order to ensure a steady flow of water they are planning to increase the capacity of their dam, up the river, at the lakes.

The contracts for the electric plant and for the new machinery have not yet been let.

The Campbell Lumber Co., Weymouth, N.S.—Mill No. 1, Upper Sissiboo Falls

Lumber News from Maritime Provinces

Annual Meeting of the Western Nova Scotia Lumbermen's Association—Operators Delayed by Lack of Snow—Recent Shipment from St. John

The Lumbermen's Association of Western Nova Scotia held their annual meeting in the Board of Trade Rooms at Halifax on March 16. The most noticeable feature of the meeting was a strong endorsation of the Provincial Government's policy of forest conservation.

A resolution was adopted congratulating the Government on deciding to grant no more Crown lands, and many speakers expressed the opinion that this would result in a great benefit to the forestry wealth of the province. There was practically unanimity on this point. All the speakers expressed themselves as in full accord with the policy and thought that apart from financial benefits to the province from the adoption of a stumpage system, the resources of Nova Scotia would be immensely increased thereby.

Two sessions were held during the day, and in the evening there was a dinner at the Halifax hotel at which addresses were delivered by Attorney-General Maclean and Dr. Magill. Much routine business was transacted at the two sessions of the society.

In the morning the president, F. C. Whitman, of Annapolis, delivered his annual address, in which he said that from past experience there would seem to be little prospect of an export from Nova Scotia of pulpwood, either in the round or rossed, but whatever was cut for pulpwood would find a market at the local pulp mills.

"With the prospect of no lack of demand for all kinds of lumber," he said, "and anticipating an active export market and with an increasing demand in our local markets, it should be the settled policy of this association to do all that possibly can be done for the preservation and conservation of our commercial timber supply. I also think that the manufacturing members of this association must concede that it is good business to be satisfied with an output in fair proportion to their timber holdings, with the prospect before them of a good demand at advancing prices for the future."

Mr. Whitman was re-elected president, F. C. Mills was elected secretary, and the following executive was chosen: T. N. Macgrath, A. D. Mills, D. H. Forsman, W. G. Clarke. A largely attended banquet was held in the evening.

Recent shipments by vessel from St. John, N.B., were as follows:

Vessel and Destination.	Cargo.
Mar. 1—Man'r Importer, Manchester...	1,087,751 ft. spruce deals.

Mar. 11—Laura C. Hall, Boston.....	117,586 ft. boards and plank.
Mar. 11—H. C. Chamberlain, New York..	233,922 ft. spruce deals.
Mar. 11—Calabria, New York	2,082,800 lath.
Mar. 12—S. A. Founes, Sutuate, Mass. ..	119,962 ft. spruce plank.
	50,000 lath.
Mar. 14—Brookline, Salem, Mass.	2,600,400 lath.
Mar. 14—Ida Barton, New London, Conn.	125,877 ft. spruce plank and boards
Mar. 14—Rewa, Bridgeport, Conn.	190,390 ft. plank and scantling.
Mar. 15—Pomeranian, London & Havre..	40,875 ft. birch plank.
	11,800 ft. maple lumber.
Mar. 15—Norembega, Vinyard Haven ...	1,703,800 spruce lath.
Mar. 16—Arthur M. Gibson, New York..	376,087 ft. spruce deals.
Mar. 16—Lakonia, Glasgow	64,475 ft. spruce deals.

The snow in the lower sections of New Brunswick had all practically disappeared by the middle of March and a number of the lumber operators were then compelled to cease operations. Their success in getting out their cut depends chiefly upon the way in which they located in the fall. Those who have divided their operations up so as to be near the railroads or on the highways will get out a good average product. They will be able to get their lumber to the highways if it is not located very far from them, and by taking portable mills to their brows, will be able to saw and take their stuff out on wheels during the summer. In some cases they will have to resort to building tramways from the railway lines in to their brows. It is the general sense of reports that the cut is fully up to the average, but that every one will experience great difficulty in getting his lumber to the markets. There is now great competition to secure portable mills, upon which the situation depends, and the owners of these are having a great season.

A. McLeod, who is cutting at Annandale, on the N. B. Coal & Railway Company's line, for Malcolm Mackay and George McKean, is one of the lucky ones. He will get out all of his 2,500,000-foot cut by using a tramway for 800,000 feet of it. The others near him have not been so fortunate, however, and will have to abandon much of their cuts.

Parker Glasier, M.P.P. for Sunbury County, reports that many of the operators in the neighborhood of Fredericton will lose largely, although the price which the shortage will cause should help them. The amount of the cut was all right, but few will be able to get out more than half of their cut.

Cornelius Hagerman, operating on the Lepreaux, left about 1,000,000 feet in the yards, nearly half of his cut.

Personal and Trade News from Down by the Sea

George Cushing, of Andrew Cushing & Company, St. John, N.B., was a visitor in the Boston and New York markets recently.

Mr. J. C. Calhoun, a well known lumberman of Gaspe, fas married on March 16th to Miss Mary Trites, daughter of Mr. Jas. Trites of the I.C.R., at Moncton, N.B.

Robt. S. Coryell, of the R. S. Coryell Lumber Company, manufacturers and wholesalers, Newark, N.J., recently visited Nova Scotia, where his company have just opened a branch office at Halifax, with Mr. Alfred C. Oliver in charge.

Mr. R. A. Klock, a western lumberman, has been appointed by the C.P.R. to take charge of the newly organized department for the handling of its business in ties, telegraph poles, tiles and fence posts, sawn lumber and finished product. Mr. Klock's headquarters will be at St. John.

Sheriff O'Brien, of Nelson, N.B., reports that the lumbermen of the northern part of New Brunswick are not at all pessimistic about the outlook for the coming season. The winter was far more favorable for them than for the lumbermen in the lower section of the province, as they had a generous supply of snow.

Charles E. Oak, of Bangor, Me., who has been prominently identified with the lumber business of that State for thirty years, has severed his connection with the International Paper Company to become manager of timber lands in New Brunswick for the New Brunswick Railway Company, which own 1,600,000 acres. Mr. Oak was Forest Commissioner for Maine from 1892 to 1901. He will make his home in Fredericton, N. B.

Justus A. B. Cowles, a member of the Bay Shore Lumber Company, Salmon River, N.B., reports that the company's cut at Salmon River amounting to 6,000,000 feet, has already been got out. The only place where he anticipated any difficulty in getting the lumber out was at Black River. In the other places the cut has been got out to places from which it can be easily hauled. The company have had 125 men working in the woods around Salmon River. The mill will probably start work about the middle of April.

Mr. MacLachlin, M.P.P. for Northumberland, introduced a motion in the New Brunswick Legislature on March 17th requiring that all pulpwood and wood for pulp making cut on Crown lands should be manufactured in the province. He advocated putting on such a duty as would curtail export and cause pulpwood to be manufactured at home. Surveyor-General Gimmer admitted the importance of the matter, but said that it was doubtful if the Legislature had the power to carry out the resolution. A committee of the Government, he said, had the whole question under consideration. The motion was finally passed unanimously.

The suspension of payments by the St. Stephen Bank, of St. Stephen, N.B., has involved a number of lumber operators in an unpleasant situation. They had deposited large sums of money in the St. Stephen Bank, with which they intended to pay their men this spring. Some of the men were paid off recently by cheques on the St. Stephen Bank, and could not get a dollar when they took the cheques to town to be cashed. The lumber operators are endeavoring to make satisfactory arrangements, but, as several of them will require large amounts, they will probably experience some difficulty. One of the largest lumber operators on the St. Croix waters had deposited the money in the St. Stephen Bank to pay his men.

Shall Pulpwood Export Be Prohibited?

Hon. Charles E. Oak Opposes the Proposal at Forestry Convention—Claims Cost of Coal Forbids Paper Making in New Brunswick—W. B. Snowball Makes Effective Reply

The most interesting event at the recent convention of the Canadian Forestry Association at Fredericton, N.B., was the discussion upon the pulpwood situation in New Brunswick. The subject was introduced by Hon. Charles E. Oak, of Bangor, Maine, and Chatham, N.B., who spoke strongly in opposition to the prohibition of the export of pulpwood, claiming in particular that paper mills could not be conducted successfully in New Brunswick, because of lack of water power and the high price of coal. His views were successfully opposed by Mr. W. B. Snowball, of Chatham, N.B. Senator Edwards, of Ottawa, followed Mr. Snowball, and upheld Hon. Mr. Oak's arguments. The following is a resume of Hon. Mr. Oak's address and the discussion which followed:

The pulpwood question, Mr. Oak said, was the most important one to be discussed at the convention. Without blaming anyone for the present state of affairs, which was due to the conditions of the trade in the past, Mr. Oak said that since only by selecting the best could the lumbermen hope to make profit, the forests of New Brunswick had been cut over, leaving high stumps and with insufficient regard for the amount of destruction caused. There was now a general opinion that there should be a change in the methods of lumbering so as to conserve the forest, and to select the right course demanded the utmost care.

Mr. Snowball's Forcible Reply

Many people supposed that paper making meant deforestation. If so, he would oppose paper making, because the deforestation of New Brunswick, either by axe or fire, would mean disaster of incalculable magnitude. Spring freshets and summer droughts would destroy agriculture, and with lumbering and farming destroyed, what would be left? Paper making did not mean deforestation. On the other hand, paper makers were among the best friends of the forest. They were trying to conserve the forest, and sawmill men, seeing the results, were copying their economical methods to some extent. The advent of paper making had compelled the felling of trees with saws instead of axes, thereby saving at least 2½ per cent. of the tree. Tops were taken out to a much smaller size, which lessened fire risks and added to stumpage revenue. A still-greater saving was the use by the paper mill of undersized timber destroyed in making yards, roads and landings, and also the broken, crooked, forked, seamy and defective trees that were useless at the sawmills. Careful tests made in the St. John valley showed that only from 60 to 65 per cent. of the tree was utilized for lumber, whereas similar tests where wood was got out for paper making alone, showed that 85 per cent. of the tree was utilized. Besides, the sawmills not having use for the defective and crooked trees, left them to cumber the ground and prevent the growth of valuable trees. This was a serious item, as anyone could see upon visiting old cuttings. If it were a question of the survival of the fittest, then it should be the sawmill rather than the supplying mills for paper, that should be driven out.

This was not the question, however, because there was room for both and because there was much timber of the species used for paper making more valuable for the sawmills than for paper making. The two should work in harmony, using up the product to the greatest advantage. While the average growth was 52 feet per acre, this could be much increased by proper handling, because owing to increased stand the basis would be two or three times as large as now. This was what the paper mills were trying to do. With such large amounts invested in plants, it was only provident for them to seek to keep up the supply of raw material for an indefinite period. He denied emphatically that paper makers stripped lands they operated. While they cut smaller trees in some localities, this was done advisedly for the purpose of increasing the rate of growth. Only on thin, scruf soils, where, after thinning, the balance would blow down, was deforestation allowed.

If the argument were sound that the export of pulpwood should be prohibited, in the expectation that paper mills would be established, then the export of deals should be prohibited for the same reason. Deals were no more finished product that pulpwood. Before "killing the goose that lays the golden eggs" it would be well to consider whether the establishment of large paper mills in the province was possible. He submitted that it was not. To make "news" paper, which was the greatest commercial product of wood pulp, enormous power was required for making 85 per cent. of the material used. It took 300 horse power to run one grinder producing about four tons of pulp, representing about the same number of cords of wood, per day. A modest mill contained at least 12 grinders, requiring 3,600 horse power. If these 12 grinders were run every working day, they would require only about 8,000,000 feet of logs per year. A deal mill using the same quantity of logs would require but 150 horse power to run it.

As to grinding pulp by coal, the best figures prepared by experienced men were that it would require five pounds of Nova Scotia coal for each horse power per hour to furnish steam. Therefore a 300 horse power grinder would require 7½ tons of coal for each ten-hour day. Coal, say, at Chatham, costs $4.50 per ton, so that the cost of coal alone would be $8.44 per ton of pulp. This would, of course, be materially increased by cost of up-keep, and tending furnaces. Pulp, in winter, the best season was selling at $17 per ton, so that the cost of power alone was considerably in excess of one-half the value of the pulp. Suffice it, that so far as he knew there was not a steam driven pulp mill in Canada or in the United States.

As to water powers. There was only one, on the east or north shore (the Nepisiguit river), where it would be possible to turn half a dozen grinders, and this for only a portion of the year. Would anyone think of tying up the whole timber business for the sake of one small mill? There was a magnificent undeveloped water power at Grand Falls on the St. John river, but there was enough timber tributary to supply it for a long term of years, which precluded the possibility of sending east coast timber by rail to Grand Falls.

Leaving out Quebec and Ontario, which had unlimited pulpwood and water powers, and also Nova Scotia, where also the conditions were different, he discussed whether it would pay New Brunswick to prohibit the export of pulpwood. The other provinces, having supplies of their own near at hand, would not want pulpwood for many years to come. It would likewise be impossible, for the same reasons, to make sulphite pulp in northern and eastern New Brunswick.

Grinding by steam being an impossibility, it was fair to assume that if export of pulpwood was prohibited New Brunswick would go on making deal, the lands getting constantly poorer in this stock, until it would be necessary to give them a long rest. Deals could not be made from the 3 per cent. natural growth as pulpwood could. What would supply the provincial revenue and how would the large population depending on the forest be supported? It would be a miracle if these people did not leave the province to seek work, and New Brunswick would thus suffer at one stroke, loss of revenue and loss of population.

Effect of Paper Making on the Forests

At the conclusion of Mr. Oak's address, Mr. W. B. Snowball made a vigorous reply, stating at the outset that he could see no argument brought forth by Mr. Oak which carried conviction. We should keep every dollar in Canada which was involved in the manufacture of Canadian wood. Last year, instead of keeping our wood at home, great quantities of it had been sent across to the United States, there to be turned into paper. From the province of Quebec alone, one million cords of wood had been sent across to maintain foreign labor in the United States. Canadians were entitled to obtain the greatest possible returns from the natural products which they possessed. The mill owners had perhaps not done all they could for the Canadian people, but they had done much more than the rossing mills. One only had to visit the Miramichi and see the two rossing mills running there, and compare them with any sawmill or with the gang mill of the Miramichi Lumber Company operating on the other side of the river. They would then readily see which gave the greatest amount of employment and expended the most wages in the district. It had been a disaster to the people of that part of the country when the International Paper Company had come into New Brunswick to ross wood and send it out of the country.

Mr. Oak had made much of the argument that there was not sufficient water power in New Brunswick to operate paper mills. Mr. Snowball claimed that this was incorrect. They could have the ground wood pulp made at Grand Falls—where it was said there was an unlimited supply of spruce—and they could have sulphite mills at Chatham or Fredericton and manufacture the sulphite pulp there. The mechanical and the sulphite could then be brought together and paper mills could be established at St. John or some other point.

Mr. Snowball devoted some attention to Mr. Oak's argument relating to the price of coal, claiming that Mr. Oak had made a mistake in this matter. He had referred to the cost of coal as $4.50 per ton. This, however, was the price of screened coal of the best quality from Sydney. On the Miramichi it did not cost the mills that much for coal. They used the slack coal, costing $1.85 per ton delivered on the wharf at Chatham so that the coal argument was really unfounded.

Senator Edwards replied to Mr. Snowball, and stated that in his opinion the arguments presented by Mr. Oak were unanswerable. He believed it would be suicidal to prohibit the export of pulpwood to the United States and claimed that it would be just as reasonable to prohibit the export of sawn lumber to the United States.

Some further discussion took place in connection with the subject, and the matter was finally disposed of by the passage of a very noncommittal resolution.

Ontario Mills Prepare for Business

Many Alterations and much New Machinery Being Installed—Everyone Looking Forward to an Excellent Season's Trade—Reports from a Number of the Mills

The spring activity among the mills of Ontario is unusually prevalent this year, particularly in the Georgian Bay district, where many of the mill owners are making important additions and alterations. From a large number of reports received, it is clear that the prospect for a successful season's trade is excellent. The demand for lumber was never more indicative of a steady and growing trade at good prices. The removal of the tariff difficulty disposes of all trade depression.

The Pine Lumber Company, of Pine, Ont., are moving from Pine to Devon, five miles east of Chapleau, where they are building their mill and where, with their circular saw for slabbing they are adding a circular gang. They are putting in two new boilers, 66-inch by 16 feet, manufactured by the Waterous Engine Works Company, Brantford, Ont., who have also supplied the other new machinery, altogether four or five carloads. Their mill building is substantially constructed, 45 feet wide and 149 feet long, with the necessary additions for lath and picket mill, sorting tables, etc., and with separate boiler house all covered with galvanized roofing. The company report that they have taken out logs for the new mill and that they finished hauling on March 18th. They then commenced hauling waney timber for Austin & Nicholson, whose logs, taken from limits adjoining the Pine Lumber Company's limits, they have contracted to saw. The Pine Lumber Company's white pine logs will run from 6 to 8 per thousand feet and they report that they are of a better quality than they have ever had before. They have still a quantity of last season's cut to sell and are desirous of cleaning out all the remainder of their lumber so as to be able to move to their new mill permanently. Market conditions, they report, are slowly and steadily improving, but the lower grades are still difficult to dispose of.

Extensive preparations are being made by the Hope Lumber Company at Thessalon, Ont., who purchased Mr. G. L. Burtis' mill last fall, for the coming season's work. The Hope Lumber Company have been large operators north of Blind river for the past seven years and are now making ready for the first attempt to turn out their own product. Mr. E. B. Foss, of Bay City, Mich., is the principal figure of the company. Mr. T. J. McLennan, of Collingwood, is the manager; Mr. Dickson, also of Collingwood, is superintendent of mills, and Mr. J. W. Ogden, of St. Joseph, Mo., will be in charge of the outside work. Mr. Ogden held the same position with Mr. Burtis last year, and is a lumberman with very wide experience. Mr. Robert McKay, general manager for Mr. Foss, will work between Bay City and Thessalon. Some $10,000 are being expended in repairs, alterations and improvements. It is the intention of the company to build a large planing mill here which will employ from 34 to 50 men all the year round.

The Pearce Company, Limited, Marmora, Ont., broke up their camps about the first of March and report having had a fine winter for operations. Camp supplies were high in price although oats and hay were lower than during the winter of 1908-9. Driving will commence about April 1st. Inquiries and sales, they report, are improving and the outlook is very encouraging. They confidently expect a brisk summer trade. During the past winter, they state that the camps have not been so much troubled by men "jumping" as in former winters.

Pedwell & Lemcke', Lion's Head, Ont., had a good winter for their camps, although the snow was too deep. As a result the logs cost a little more to get out. Other neighboring firms, they say, secured their usual quantity of logs, but the percentage of hardwoods is much higher this year, while that of hemlock is lower. In fact, very little hemlock was taken out in that section. Pedwell & Lemcke's stock will run 3,000,000 feet and has been all sold at better prices than those of last season. They commenced mill operations on March 21st.

A prominent northern Ontario firm of lumber manufacturers, cutting about 13,000,000 feet annually, report under date of March 17th that their logs have all been hauled and that they have secured about the same amount as last season. The demand for lumber is better than it was a year ago, and prices are slightly in advance. They are looking for a fair business season and report that at the date of writing the tariff problem was the only cloud on the business horizon.

The Bray Lumber Company, at Powassan, Ont., are dissolving by mutual consent of the partners, and Mr. Alex. McBeath is retiring from the company. The company report that they have secured a fair cut during the present winter. They also report a general advance in the price of hardwoods, and a better demand with slightly improved prices for other classes of woods. They are looking forward to a much better season than that of 1909.

E. J. Bucknam, of the Tomiko Mills, Tomiko, Ont., is installing a No. 19 gang, made by the Wickes Company, of Saginaw, Mich. The machine is a self-containing power steam-driven machine. He anticipates that the capacity of the mill will be increased at least 30,000 feet every ten hours, over the present, which is 90,000 feet per day. The Tomiko mills now have in the water at the mill, 164,000 pine logs ready for the season's cut.

Playfair & White, lumber manufacturers, Midland, Ont., report under date of March 19th as follows: "The big thaw and warm weather of a few weeks ago caused slush in the lake, made hauling very slow and difficult, and increased the cost a good deal. Quite a few lumbermen will need all of March to get their logs in. The demand for good lumber is especially active, while prices on the lower grades seem to be improving."

"Knight Bros. & McKinnon, Limited," is the name of a new company which is being formed at Burk's Falls, Ont., which includes the Knight Bros., Limited, and Mr. M. McKinnon, dealer in lumber and planing mill goods, of Cobalt. The capital stock of the company is $50,000. They report that hemlock, spruce and hardwoods are rather short in supply, with an upward tendency in price.

C. E. Whicher, Colpoy's Bay, Ont., has installed a new boiler in his mill, 18 feet by 6 feet, Goldie & McCulloch make. They have also installed a refuse burner. During the winter they have secured about the usual output of logs, and report that the mills generally have good stocks. They also report that the tendency of prices is upward but that so far there has not been much advance.

J. Austin & Sons, Kinmount, Ont., report that their winter operations have been finished satisfactorily. They have 90,000 pieces boomed, ready for driving. Trade conditions, they state, are considerably improved both in hemlock and hardwoods, but shingles are still slow. They are sold close to their stocks in everything but green hemlock and have not much even of that.

J. Kaufman, lumber manufacturer, Berlin, Ont., is building an addition to his planing mill at Berlin. The new portion will be 40 x 100 feet, four storeys high, of reinforced concrete. It will be equipped with the best machinery and will increase the present capacity about 50 per cent. The estimated cost is about $14,000.

The Bruce Mines Sawmill Company, Limited, Bruce Mines, Ont., report that they are building new docks about 400 feet long and 42 feet wide. Their logging camps finished during the second week in March. They report that they are receiving a large number of inquiries and have about half of their stock sold.

G. E. Niebergall, Wiarton, Ont., reports that he is expecting an early resumption of spring activities. The deep snow, he states, made it very difficult to skid and stocks will not be as large as heretofore. He reports numerous enquiries for hardwood and a slow trade in hemlock and pine.

The Niagara Veneer & Basket Company, Limited, Parry Sound, Ont., are erecting a new dry kiln and storage shed and are constructing 2 railway sidings. Under recent date they report as follows: "By the number of orders and inquiries received, the demand will be fair this season."

Mitchell Bros., Berkeley, Ont., have got out a good supply of timber during the past winter and report that market conditions are good Prices are fair and they have a demand for everything they can manufacture. The demand is mostly for export.

Alfred Mitchell, lumber manufacturer, Powassan, Ont., reports that prices are fair, about the same as last year. The demand is better this spring and stocks are about the same as last year. He is looking forward to a satisfactory season's trade.

Waldie Brothers, Limited, Spragge, Ont., and the Victoria Harbor Lumber Company, Victoria Harbor, Ont., will commence sawing at their mills as soon as the ice goes out, which at present looks as though it would be about the third week in April.

The Lake Rosseau Lumber Company, Shawanaga Mills, Ont., have secured their full season's cut of logs. They are adding to their plant by the installation of a shingle mill.

Keenan Bros., Limited, Owen Sound, Ont., have put in a new mill at Miller Lake, 16 miles northwest of Lion's Head, and have been cutting hardwood all winter.

The Parry Sound Lumber Company will start their mill on April 15th. They report that their logs have all been cut and secured, amounting to about 25,000,000 feet.

The Seaman, Kent Company, Limited, at Dyer's Bay, finished their winter operations on March 19th.

The Conger Lumber Company, Parry Sound, Ont., will start sawing about April 20th.

Steady Improvement at Montreal

Good Demand for Lath from the United States—Hardwood Markets Continue Strong—Prices Firm

Montreal Office of the "Canada Lumberman."
March 24th, 1910.

Business with the lumber dealers in the Montreal district continues to show a gradual and steady improvement. Spring trade, considering the prevailing mild weather, has perhaps been unusually slow in opening up, but from this time on the volume of business transacted should show a steady increase.

February building figures evidence a growth of nearly $30,000 over the same period in 1909, and March, at its present rate, will make even a better showing.

Splendid reports continue to reach this port regarding the ice conditions in the St. Lawrence river, and at the time of writing the Government ice breakers are making rapid strides towards demolishing the obstructing ice.

The tariff issue has not been without its unsettling effect upon the lumber trade, and American orders have frequently been taken subject to the condition that the maximum tariff shall not become effective. A number of dealers also report an excellent volume of business transacted with New York for delivery to the United States before March 31st.

Lath continue the feature of an otherwise normal market, and those who are fortunate enough to have stocks are making frequent sales. The American markets are now buying lath and are willing to take the risk of paying an additional 25 per cent. ad valorem tax.

Pine, in the first class grades is practically off the market. Common and box lumber is, however, offered freely, but the trade is apparently well supplied.

Hardwoods continue in good demand and dealers are optimistic in their opinion of market conditions.

Timber merchants, owing to the steady operation of winter and spring building construction, are busy and unresitatingly state that the present season, in volume of business, is very much in advance of the same period last year.

The pulp and paper situation has been most uncertain during the past fortnight on account of the United States having threatened to enforce a maximum tariff, unless Canada extended to them the concessions in duty given France and twelve other countries in the French treaty. The result has been a desire on the part of lumbermen, pulp and paper men to get as much of their product into the United States as possible

Heavy shipments are going forward to protect customers in the United States, should the 25 per cent. additional ad valorem duty be imposed on the first of April.

A number of American consumers have been ordering forward a three months' supply, and this has stimulated the demand and traffic accordingly. The outlook since the Albany conference is favorable to an agreement, but it is generally thought that Canada will have to make considerable concessions finally and that the United States will in return promise, when their complicated tariff machinery will permit, to make reciprocal arrangements favorable to Canada.

Following are revised current wholesale lumber prices for Montreal:

1-inch pine log run, mill culls out	$24.00 to $27.00
2-inch and 3-inch pine log run, mill culls out	27.00 to 30.00
1-inch pine log run, dead culls out	20.00 to 24.00
2-inch and 3-inch pine log run, dead culls out	24.00 to 26.00
Pine "O" culls	13.00 to 14.00
Pine mill culls	17.00 to 19.00
Spruce flooring, sheeting, etc., No. 1	24.00 to 26.00
Spruce flooring, sheeting, etc., No. 2	19.00 to 21.00
Merchantable, spruce boards	17.00 to 18.00
2-inch merchantable spruce	16.50 to 18.00
Cull spruce boards	14.00 to 15.00
2-inch spruce culls	14.00 to 15.00
1¼-inch spruce mill culls	15.00 to 16.00
Spruce scantling, 3x 3, 12 and 13 feet	16.00 to 17.50
Spruce scantling, 2x 3, 12 and 13 feet	16.00 to 17.50
Spruce scantling, 3x 4, 12 and 13 feet	16.00 to 17.50
Spruce scantling, 2x10, 12 to 16 feet	19.50 to 21.50
2-inch (scant.) x 9, fifth quality, N. Y. "outs"	16.50 to 18.00
Oak, 1sts and 2nds, quarter white	87.00 to 90.00
Chestnut, 1sts and 2nds, 1 inch	50.00 to 52.00
Birch, 1-inch log run, mill culls out	20.00 to 22.00
Maple, 1-inch log run, mill culls out	20.00 to 22.00
Basswood log run, mill culls out, 1x4 and up, winter sawn	24.00 to 26.00
Basswood log run, dead culls out, 1x4 and up, winter sawn	20.00 to 24.00
Laths, mill run, spruce, 1⅜-inch x ⅜-inch, 4 feet	3.00 to 3.25
Laths, pine, No. 1	4.00 to 4.25
Laths, pine, No. 2	3.25 to 3.50
Laths, pine, No. 3	2.75 to 3.00
Shingles, clear	2.90
Shingles, 2nd clear	2.15
Shingles, extras, 1's	1.35
Merchantable hemlock boards	14.50 to 16.50
Cull hemlock boards	13.00 to 14.00

The estate of B. Grier have moved their offices from 1040 to 1058 Notre Dame street west. The new office of the company is still adjacent to their timber yards, and is much more commodious than their former quarters.

The Laurentide Pulp & Paper Company, Limited, are claiming $1,216 damages from McDonald & O'Brien, of Three Rivers, for lumber cut in trespass on their limits.

Mr. Wm. T. Mason, of Messrs. Mason, Gordon & Company, recently returned from a trip to the Southern States. Mr. Mason reports a healthy condition existing in yellow pine circles.

Mr. R. J. Hutchison, president of the Muskoka Wood Manufacturing Company, spent a couple of days in Montreal this week arranging to extend the company's business in this district.

"The Hardwood Floooring Company," recently organized to carry on an exclusively hardwood flooring business in Montreal and vicinity, have taken over the agency for J. R. Eaton & Sons,, Orillia, "Empire Brand" hardwood flooring. Mr. C. A. Spencer, who has been acting as J. R. Eaton & Sons agent here, is interested in the new company, whose offices are at 55 St. Francois Xavier street, Montreal.

The dissolution of the Western Lumber Company and its complete reorganization have just been announced. Mr. Leon Gagne, jr., formerly manager of the company, has purchased the entire interests and will continue to carry on the business as formerly conducted. Mr. Gagne has just returned from the Gaspe, Quebec district, where he completed arrangements for the purchase of a large quantity of spruce lumber.

The Chicoutimi Pulp Company are now completing their two mechanical pulp mills at Chicoutimi, Que., and they expect these to be ready for operation by May 1st. Their production will then be 170 tons per 24 hours dry weight, or 50 tons more than at present. The rebuilding and enlargement of the Ouiatchouan Fall mills is also practically completed, the capacity of this mill being 60 tons dry weight of mechanical pulp every 24 hours.

Personal News of Interest to Lumbermen

George M. Mason, lumber manufacturer, Ottawa, is spending an extended holiday in Bermuda.

R. H. Campbell, Dominion Superintendent of Forestry, on March 19 addressed the Minnesota Conservation & Agricultural Development Congress in St. Paul on the progress of conservation work in Canada.

T. F. Elmitt, head of the new Elmitt Lumber Company, has been promoted from the rank of lieutenant to captain, in the 43rd Duke of Cornwall's Own Rifles. He is among the half-dozen of the capital's best shots and has been at Bisley.

Controller James Davidson, of Ottawa, head of the lumber firm of Davidson & Thackeray, manufacturers of sash, doors, etc., will erect 16 new dwellings this year, which will make him possessor of 100 houses in Ottawa, all built in the last few years for renting purposes.

Mr. John Hanbury, recently of Brandon, Man., has moved to Vancouver, so as to be able to complete a number of radical changes in his business. He has secured in Vancouver a mill which he states, when completed, will be the most efficient sawmill in the coast province, with a capacity of 75,000 feet per ten hours.

Vice-gerent Snark Thomas Patterson, of Hamilton, has decided to hold a concatenation of the Order of Hoo-Hoo for eastern Canada, at Hamilton, on April 22. Already a number of new members have promised to join and the prospects are encouraging for a good gathering. The activity among the members of eastern Canada promises well for the prospects of the annual meeting of the order which it is hoped will be held in Winnipeg in 1912.

Mr. S. Kirk, formerly accountant of the staff of the Big Bend Lumber Company at Arrowhead, B.C., has joined the Gibbons Lumber Company, who recently purchased the Dominion timber berths of the Big Bend Company and have taken an option on the remainder of their property, including over thirty provincial timber limits. The Gibbons Lumber Company have temporarily located their business offices at Arrowhead in the premises of the Big Bend Lumber Company.

It is reported that the C.P.R. intend to establish a branch of their service, to be known as the Tie and Timber Department, in British Columbia. The intention is that the new department will manufacture ties for its lines on the lands in British Columbia. The report states that Mr. G. Erickson, formerly superintendent of the Creston division, has been appointed superintendent of the department and that he will work in conjunction with the chief timber ranger, Mr. E. Mallandaine, at Cranbrook. A further report states that the C.P.R. will have its lands thoroughly explored this summer, and may erect several tie mills similar to the one now operating at Wardner.

Mr. George Young, a well known timber dealer, of Victoria, B.C., is reported to have sold a large tract of high grade timber in the San Juan and Gordon river valleys. This timber is believed to be one of the best timber holdings near Victoria.

A Uniform Log Rule for Canada

"Timber" Suggests Adoption of Doyle's Rule — The Railways and the Forests—Laws should be Enforced

Controversies through the columns of our journals are interesting and educating, whether referring to lumber or anything else.

"Subscriber" making the suggestion that a "Uniform log rule for Canada" should be adopted, is worthy of consideration by the lumbermen. Perhaps one of the provincial rules might be appropriated to serve all. "Subscriber" speaks of a rule used in New Brunswick, which he terms as being unfair to the buyer.' How about the seller? He also makes mention about the Quebec rule. But how about the Ontario rule? Might this not perhaps be the fairest of all? Might it not serve both buyers and sellers satisfactorily?

The basis of the Ontario (Doyle's) log rule is as follows:

Deduct 4 inches from diameter of log, meaning 2 inches on each side, for squaring the log. This will not nearly square a log of any large size, but is considered to be a fair equivalent for the necessary slabbing, and so it is. Square the remainder, same as you would a piece of square timber (arithmetically), and the result represents the number of feet contained in a 16 ft. log, thus:

20-inch – 4-inch = 16-inch, 16 × 16 = 256 feet.

In the ordinary sense of computation a piece of timber 16-inch x 16-inch x 16 feet contains 341 feet board measure, but 25 per cent. is deducted for sawdust. Depending on the thickness and size of the lumber and timber, into which you may be sawing your logs, this allowance may be more or it may be less than you will actually lose, by taking it altogether, I am under the impression that this rule is about as fair a rule for general application as can be adopted. The seller of small logs perhaps may not approve of it, but he must not forget that the buyer would rather not buy his small logs at all, but prefers the large sized logs, and for these, computed by this rule, the seller is getting as great a number of feet as the buyer will be able to produce in his sawmill, and more, if all is cut into 1-inch lumber.

Taking all points into consideration, I consider the Ontario (Doyle's) rule the fairest rule for general application, and think its adoption throughout the country would be highly commendable.

Might I suggest, that somebody say something about the enforcement of one of our laws as it stands on the Statutes of Ontario, "An Act to Preserve the Forests"?

The effect of the violation of this law is making itself felt more and more every year. Millions of feet of our valuable timber resources are going up in smoke annually. The framing of that or any other law is worth nothing if not enforced. Is this enforced? Is every smokestack of the railway companies' locomotives provided with a hood or screen of 22 wires per square inch? Not much. Are the ash pans of the loco motives closed? I am sorry to say they are not always closed.

Legislators, stop legislating until you make some provision for these all-destructive railway companies to comply with the conditions of this much important Act, the same as you are making the lumbermen carry out the laws, no matter how hard and unjust some of them appear to be. If these all-important railway companies are not to live up to these conditions or laws, why have them framed at all? Would they not better be simply erased?

Mr. Editor, I would like to say more, but perhaps have already said too much to be allowed space in your paper.

Yours truly, TIMBER.

Double Cut Bands Make Good Timber

I notice an article on pages 24 and 25 of the "Canada Lumberman" of March 1st, to which I would like to refer. One writer, stating his experience with double cut band saws, says that he had to make his lumber thicker to save mis-cutting, or else it would make some of the boards thin. I have looked after both, and I find that if the double cut saw is properly arranged for cutting, with a good carriage, so that there is no lost motion, and if it is well aligned, it will not need any favor from a single cut. In my time I have seen single cut saws that would not make two boards alike. When a saw is working in this way, either single or double cut, there is something wrong. Before going too far the sawyer should look around. Some filers notice that the lumber is bad, and they put more tension in the plate, when probably the saw is all right. By so doing they spoil the saw and abuse it so that it cracks. Then they say the saw is no good, when it may be one of the best. I find it is better to look over everything about the saw and carriage carefully, and thus save trouble. If he does so, the sawyer will be able to make as good lumber with a double cutting saw as with a single cutting saw, and will have one-third more lumber for every day that his mill runs. I will guarantee that this is right.—A. E. Cartmill.

Reports under date of March 16th from Three Rivers, Que., show that the shanties were then about to close and the lumber jacks had already commenced to leave the camps.

Important Concentration of Selling Interests

Ottawa, March 18—In order to reduce the cost of marketing their lumber the W. C. Edwards Company, of Ottawa, and the Hugh McLean Company, of Buffalo, have merged their sales departments in New York. The amalgamation includes the Bathurst Lumber Company, of Bathurst, N.B., and the Cascapedia Manufacturing Company, of Bonaventure and New Richmond, Que., the ownership of which companies is practically identical with that of the W. C. Edwards Company. The only outside interest included in the new distributing company is the Buffalo business. The product of all these mills has been sold on the New York market under separate management up to the present time. The union of the offices in the big commercial centre will amount to a large saving and other incidental advantages.

The significance of the amalgamation was over estimated in some of the daily papers which announced that three separate Canadian companies had merged their interests. The "Canada Lumberman" learned from inquiry of the W. C Edwards Company that the combination of interests would have no more than an internal effect on the trade and did not concern the manufacturers in general. As to what effect a hostile tariff would have on the venture it was deemed not prodent to surmise until the United States had taken a stand on the maximum tariff clause.

Senator W. C. Edwards is president of the new company; Hugh McLean, Buffalo, 1st vice-president; Gordon C. Edwards, Ottawa, 2nd vice-president; Christopher Cox, assistant secretary. As well as doing away with the cost of individual selling departments, the united companies expect to be able to engage more successfully in export trade and meet competition, especially in the territory of southern New York, New Jersey and the city of New York. The organization will be known as the Manufacturers' Lumber Company.

Many Applications for Young Trees

Ottawa, March 22—The applications for young trees for shade purposes on western farms are coming in so rapidly to the forestry branch of the Interior Department that it will be necessary to decrease the number usually allowed to settlers. The bigger volume of requests is the natural outcome of growth in population and the spread of education regarding the value of the trees. It is probable that between 800 and 1,000 trees will be given to a settler in the distribution which will be made the coming spring. The territory benefitting by this distribution lies wholly in the Provinces of Manitoba, Saskatchewan, Alberta, and the railway belt of British Columbia. Ash grown at the nursery at Indian Head and cotton wood imported from the United States, are useful for transplanting, and will be much used. The demand has greatly outgrown the capacity of the nursery. This work was begun in the interests of the prairie farmer in 1901, and since then 14 million trees have been planted on 9,000 farms. Regular inspection by Government officers is made to show that the applicant has the ground cultivated fit for the trees before the distribution. He must also sign an agreement that he will give the trees due cultivation in order that the work expended in his interests by the Government shall not be lost.

Annual Meeting of Forestry Association

At the eleventh annual meeting of the Canadian Forestry association, held in Ottawa recently, the most important business transacted was the passing of several resolutions favoring better fire protection along railroad lines, the preservation of water powers and the preservation of forests. In all, five such resolutions were passed. They were in favor of making a forest reserve of the eastern slope of the Rocky Mountains, of fire protection along lines of Government railways, of the preservation of water powers, of the reservation of forests on the head waters of streams, and lastly, in favor of establishing of forest reserves in areas suited only for forests.

The consideration of the fire laws, and suggestions for their improvement was left to committees appointed at the meeting.

The work of the new permanent secretary, Mr. James Lawler, in organizing and delivering illustrated lectures throughout the Dominion was pronounced a decided success, and Mr. Lawler was highly complimented on his first year's work. The publication of pamphlets and periodic literature will be extended during the coming year.

Officers were elected for the coming year as follows: Patron, Earl Grey; honorary president, Sir Wilfred Laurier; president, Senator Edwards; vice-president, Geo. Y. Chown; registrar of Queen's University, Kingston.

The board of directors was increased from 15 to 21, and the following new directors were elected: Thomas Southworth, Toronto; Aubrey White, Deputy Minister of Crown Lands, Toronto; Mr. R. L. Borden, M.P.; A. P. Stevenson, Dunstan, Manitoba; G. C. Piche, Crown Land Forester, Quebec; F. C. Whiteman, Annapolis Royal, N.S.; Alex. MacLaurin, Montreal; Carl Roirdan, Montreal.

At the annual meeting of the Pacific Lumber Inspection Bureau held recently in Seattle, Mr. R. H. Alexander, Vancouver, B.C., was honored with election to the office of first vice-president.

Machinery and Equipment

What Manufacturers of Logging, Sawmill and Woodworking Appliances are Doing

The Kelley Electric Routing Machine

The Kelley electric routing machine is a portable, electric, high-speed motor, driving one or two cutters and operated by hand on the bench. It will be appreciated in the mill and furniture factory for its wide range of usefulness, time and labor-saving qualities and quality of the finished work produced.

The machine, taken in its entirety, represents a new idea, new principles of applying the cutters direct to the work, and is capable of being guided with accuracy to within a limit of a hundredth of an inch. The

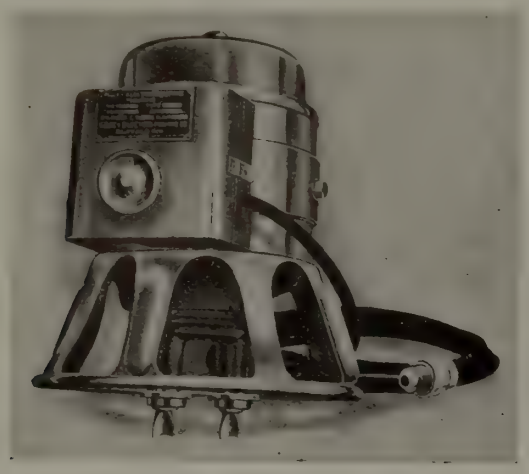

Fig. 1. Electric Routing Machine

principle of the double spindle, driving two cutters, allows for making taper or other irregular cuts in one operation.

The machine is operated with ease and perfect safety, which is a feature that equally appeals to the users and owners of woodworking machinery. The cutters, embracing many forms and meeting many requirements, are the result of liberal experimenting and are noted for great tensile strength and ability to satisfactorily hold the edge against speed, friction or heat. Their form and construction, and the fact that they are driven at high speed, ensure perfect and smooth cuts in any wood.

The Kelley router has stood the test of three years' constant use. Its work embraces routing cuts, moulding, dovetailing, fluting, inlay cutting and carving. Mention may appropriately be made of the pioneer users of this machine whose interested efforts are largely responsible for its great efficiency and wide range of usefulness. The list includes: The

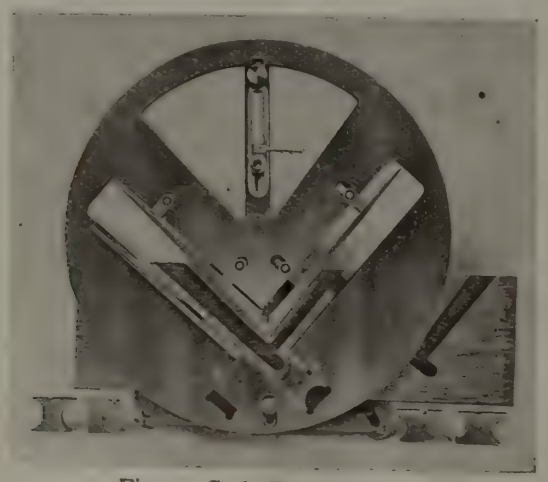

Fig. 2. Stair Framing Plate

Blonde Lumber & Manufacturing Company, Chatham, Ont.; R. Laidlaw & Company, Toronto; Montgomery Bros. & Company, Buffalo; Chas. C. Kellogg & Sons Company, Utica, N.Y.; Union Builders Co-operative Contracting Company, Dunkirk, N.Y.; Beach Lumber Company, Rome, N.Y.; Geo. B. Monks Company, Allegheny, Pa.; Homestead Lumber Company, Somestead, Pa.; C. H. Rugg Company, Rochester, N.Y.; John Luther & Sons Company, Rochester, N.Y.; True & True Company, Chicago; W. F. Hurd Company, Detroit; S. Karpen & Bro., Chicago; Toledo Desk & Fixture Company, Toledo, Ohio; G. Woolford Wood Tank Manufacturing Company, Philadelphia.

The stair-framing plate is adjustable to any range of pitch, width or thickness of stock, having O.G. half-round and square nosing forms, which are ajustable for the overhang of the tread. The machine makes a tapering cut in one operation. The time on curly birch for each cut, ready for stock, being given at 20 seconds.

The dado frame allows for taper—dovetail cuts and blind housings, the machine working equally well on wooden patterns, which gives an unlimited range for design, due to its portability, its nature and construction overcoming all vibration.

The Kelley router is manufactured by the Kelley Electric Machine Company, Buffalo, N.Y. It was invented by George L. Kelley, whose

large experience in woodworking machinery and acquaintance among woodworkers has made possible this very ingenious and reliable electric machine.

A Historic "Tower" Edger

There are very few machines of any kind or make so well known among sawmill men as the "Tower" edger, made in 72 sizes and styles by the Gordon Hollow Blast Grate Company, of Greenville, Mich. Much interest, therefore, naturally attaches to the accompanying letter, in relation to the first one of these machines ever made:

"Weidman, Mich., Nov. 20, 1909.

"Gordon Hollow Blast Grate Company, Greenville, Mich.

"Gentlemen,—I am sending you to-day the shaft that carries the shifter sleeves; also the sleeves themselves. Please turn up the shaft and fit the sleeves with new brasses and return to us at once.

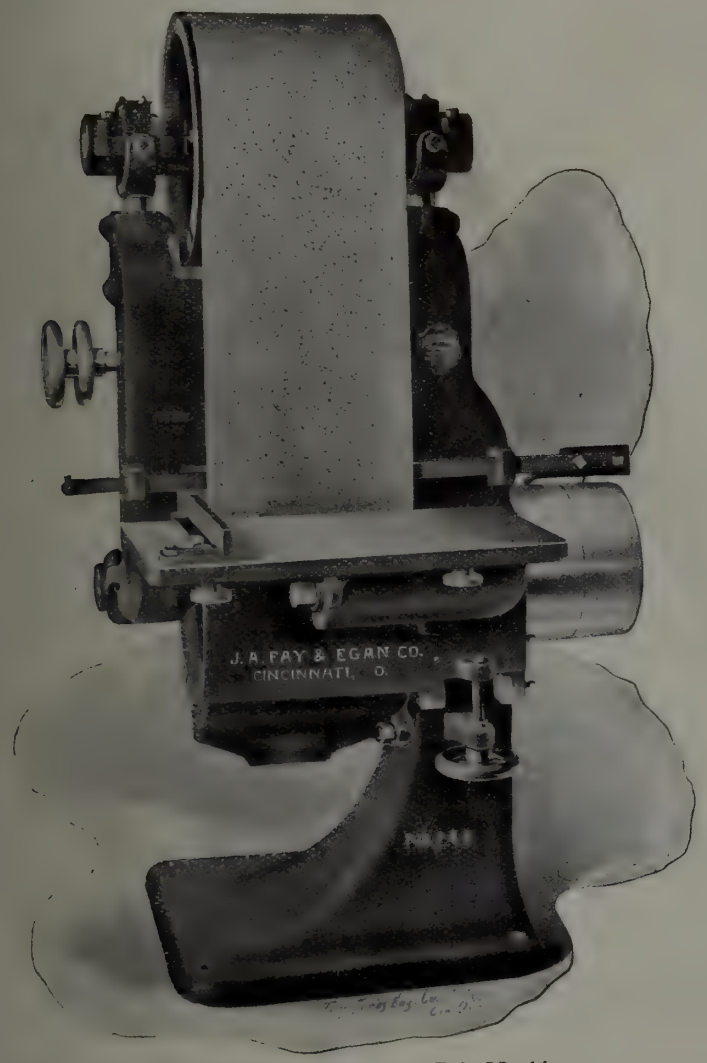
"This is a part of the first Tower edger made, which has edged 135,000,000 feet of lumber.

"Yours very truly,

"John S. Weidman."

A correspondent of the "Canada Lumberman" writing from Liverpool, N.S., emphasizes the necessity for portable rotary gang saws in lumber manufacturing in Nova Scotia. The operators in his district are using a lot of one-saw rotaries. The saws are very thick and cause a great deal of waste. A gang saw, he says, will not make more than one-half the amount of sawdust, and will give one more board for every log. If a portable rotary gang were installed, a light single rotary would have to go along with it, to take two slabs from the log, after which it would be turned down and put through the gang. The gang could be all put in a frame and driven by one belt. The foundation for the gang could be made of cement.

A New Vertical Sand Belt Machine



We are pleased to introduce to our readers a new machine manufactured by the J. A. Fay & Egan Company, called their No. 246 vertical sand belt machine.

The manufacturers designed this machine for use in cabinet, furniture, desk and box factories, planing mills and general woodworking shops for sanding boxes, finishing and fitting drawers, accurately squaring them and sanding irregular surfaces and framed work, etc.

The sanding surface of the machine is 14 inches wide and 24 inches high.

The column is a heavy, cored casting with broad base and stands free from vibration.

The drums are made of iron, covered with wood and carpet and accurately balanced. The driving drum is carried on a shaft of large diameter running in self-oiling bearings. The idler drum shaft runs in self-oiling bearings carried on trunnion yokes, ensuring perfect alignment and

Fay & Egan's New Sand Belt Machine

are arranged with simultaneous or independent adjustment from the operator's side for tracking or tightening the sand belt.

The sand belt platen is mounted on the column with four threaded posts, giving accurate adjustment for aligning.

The table is fitted to the column in a dovetail slide for vertical adjustment, and is arranged to angle above and below the horizontal.

The fence is slotted, and with holes tapped in the table, any angle to the surface of the sand belt may be obtained; thus, in conjunction with the angling of the table, double angles may be obtained.

Those who desire further information should write the manufacturers for their large illustrated circular, and should mention the "Canada Lumberman." The proper address of the company is 465-485 West Front street. Cincinnati, Ohio.

New Simons Canada Saw Co'y Catalague

The 1910 catalogue of the Simonds Canada Saw Company, Limited, Montreal, Que.; St. John, N.B., and Vancouver, B.C., is now being distributed among the saw and planing mills and woodworking factories where saws, knives or files are extensively used. Rearranged, revised, brought up to date, with many new articles added, the catalogue presents a complete list of the articles manufactured. The items of special interest are a new showing of inserted tooth and band saws. The catalogue includes also a more complete list of one-man cross-cut saws, cross-cut saw handles, saw tools, three new manufacturers' brand hand saws, new pruning, compass, keyhole and nests of saws, and wood saws, carefully arranged and listed in a practical way. Several sizes have been added to the hack saw line. Metal cutting saws for all machines are listed completely.

The catalogue is printed on a good quality of coated paper and the half-tone illustrations bring out the detail construction of the goods. Much valuable information is contained in tabular form. Several pages are devoted to technical descriptions and instructions regarding the economical use of Simonds products.

A copy of this book should be in the hands of every superintendent or filer who has constant use for saws or knives. The Simonds Manufacturing Company will send a copy free to any millman who will write for it.

Miscellaneous News of the Machinery Trade

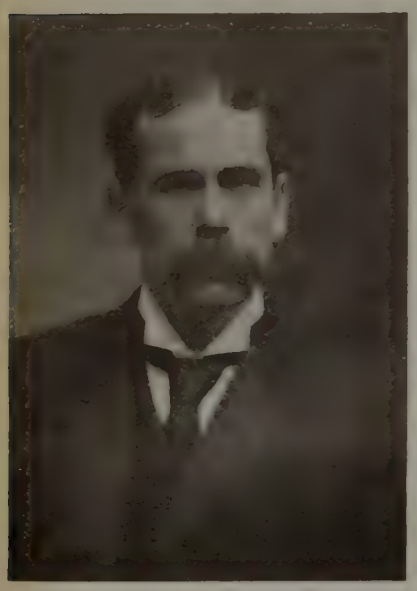
The firm of Shurley & Dietrich, well known saw manufacturers of Galt, Ont., has been dissolved. Mr. C. J. Shurley is retiring from the business, which will in future be carried on by Mr. J. C. Dietrich, who will form a joint stock company with increased capital.

The Newfoundland Government has placed on the free list of entry, machinery of all kinds pertaining to the lumbering industry. As a lumbering country, Newfoundland is rapidly coming into prominence. Large tracts of country are being opened up in the interior, which are rich in lumber supply, and mills of all kinds are being started in many parts of the country. The Government of the country are very anxious to develop this industry to its full extent, hence the removal of the import tax on lumbering machinery.

Allis-Chalmers-Bullock, Limited, Montreal, Que. Canadian Manufacturers of Lidgerwood logging machinery and also one of the leading manufacturing firms of all kinds of electric machinery and apparatus, and of flour and saw mill machinery, have favored the "Canadian Lumberman" with a copy of their calendar for 1910. The calendar is attractively designed and bears a reproduction of an oil painting, entitled "The First Engineers". The picture shows a number of beavers busily at work in felling trees and erecting a dam.

In connection with the article upon double cutting band mills which was published in the "Canada Lumberman" of March 1st, it is interesting to note that the pioneers in the manufacture of these machines were the Waterous Engine Works, of Brantford, Ont. This company were early convinced of the importance of the double cutting principle as applied to band saws. They investigated the problem thoroughly and devoted a great deal of time and money to its study, so that to-day the lumber manufacturers of Canada are indebted to them for this important advance in manufacturing methods.

"Berlin Quality" for March, the breezy bulletin of the Berlin Machine Works, Limited, Hamilton, Ont., reached us last week, with its cheerful collection of persuasion for prospective purchasers of Berlin machinery. The editor of the bulletin never fails to infect his readers with his seasonable enthusiasm for Berlin Quality machines. This time he indulges in some enticing talk upon fast feed matchers. Two hundred feet per minute is the capacity of their new "No. 90," and it apparently handles this feed with ease. Several other interesting machines are described in the March issue, which, as usual, is not only cleverly edited, but attractively printed and illustrated.



How long will it be until the production of poor lumber by antiquated mills and methods, ceases to be a factor in the regulation of at present it is hopelessly in the future. A prominent firm of Ontario manufacturers, instances this as the one great problem before the trade to-day. They lay great stress upon the difficulty of contending against the numerous producers of poor lumber and planing mill goods. Parties possessing little capital and a poor outfit of machinery flood the markets with lumber which should never be manufactured. It is not that they produce low grades, but that in many grades the make is badly sawn and unsuitable for any purpose. If they struggle along they injure the market continually. If they fail, their stocks are thrown on the market and the temporary injury to trade is sometimes extensive. Why cannot they at least practice the old maxim, "What is worth doing, is worth doing well?"

On March 15th the Board of Railway Commissioners at Ottawa took up the question of charges for transit shipments, and increased the rate from 25 cents to $1 per car per day, after 24 hours. For many years the railway companies have made a charge of 25 cents for holding lumber and grain in transit for orders. Some time ago they advanced the rate to one cent per hundred pounds. On the complaint of the shippers this was put back by the Board to the old rate. The railways again brought the matter before the Board, making a personal application to the chief commissioner, and asked that the charge should be made the same as the Board had ordered for reconsignment, namely $3 per car. The railways claimed that the service cost them something like $2.39 per car, and stated also that the per diem charge per car had been increased from 25 cents to 30 cents and 35 cents. After listening to the case as presented by the railways, the Board decided as above stated, to make the charge $1 per car.

The Retail Dealer and His Problems

A Well-known Woodstock, Ont. Dealer—Ontario Retailers Organize

A Successful Ontario Lumber Merchant

Mr. John Butler, Woodstock, Ont.

Mr. John Butler, of Woodstock, Ont., whose portrait we are pleased to publish herewith, is one of the best known lumber dealers in western Ontario. He was born in the town of Brighton, Northumberland county, and comes of North of Ireland stock. He received his early education at the public and grammar schools at Brighton and subsequently at a business college at London, Ont. At the age of 20. Mr. Butler went into business for himself in Brighton as a baker. Subsequently he moved to Woodstock, where he conducted a successful retail grocery business for a number of years. This business he disposed of and in company with his brother, Mr. R. E. Butler, formed a partnership to carry on a wholesale and retail coal, wood and lumber business in Woodstock.

It was not long before the new business was extended to the town of Mitchell. Mr. Butler made annual trips to the Pacific coast in the interest of his firm, and succeeded in establishing an excellent wholesale trade in British Columbia shingles. The business was ultimately restricted to wholesale and retail lumber and shingles. In July, 1906, Mr. Butler retired and shortly afterwards established a wholesale business for himself in pine, hemlock, spruce, lath and shingles, a business which he is still conducting with much success.

Mr. Butler has made his home in Woodstock for a quarter of a century and has taken a keen interest in the business life of the community. He has been instrumental in inducing several industries to settle in that city and has subscribed liberally to the stock issues of these companies and in some instances has occupied positions upon their directorates. Mr. Butler has also taken an active interest in civic affairs, having been an alderman for three years and mayor for two years. At present he is an active member of the Board of Trade. He has also been frequently appointed as a member of important deputations to the Dominion and Provincial Governments, which in all but one instance have been successful. Mr. Butler is a prominent member of the Independent Order of Foresters, and also of the Masonic Order.

Toronto Retailers Organize

The retail lumber dealers of Toronto have formed a "Lumbermen's Section" of the Retail Merchants' Association of Canada, so that they will be better able to cope with all the retail difficulties that they have to contend with.

The plan adopted follows along the lines of the Canadian Manufacturers' Association, or the Trades & Labor Congress, by having all persons of one class under one organization so that the entire weight of that class can be applied when a subject of common interest concerns them all. For instance, any change in the Assessment Act that was not fair to one class of retailers would affect them all, and the Association would voice them all in presenting their case before the Legislature, or the Dominion Parliament. An instance is afforded by the recent bill introduced whereby every retail merchant would have been made responsible for any accident that might happen to one of his employees or drivers while in his service. This measure was injurious to all retailers alike, and they registered their opposition to it. Another instance was the Co-operative Societies bill, which they recently defeated at Ottawa, when over five hundred retail merchants filled the House of Commons, protested against the passage of the bill, and succeeded in having it thrown out. These and similar measures constantly receive their vigorous attention, and as every bill that is introduced comes under the notice of the Provincial and Dominion Secretary, they are in a position to watch legislation that is injurious to their interests.

In addition to taking care of legislative matters, each section hold their own meetings separately, and the lumbermen's section discuss matters pertaining to the welfare of the lumber trade. At present they have several important matters under consideration, which will be referred to in the "Canada Lumberman" from time to time.

They have also a credit reporting department, which tabulates all those persons who do not settle their accounts. This list is distributed to all the members. The work of the lumbermen's section at present is confined to Toronto, but as soon as the local organization is completed it is their intention to call meetings in various districts and appoint Provincial and Dominion committees.

The local officers elected to present the lumbermen's section of the Toronto branch are: G. W. Booth, chairman; G. G. Miles, 1st vice-chairman; G. W. Boake, 2nd vice-chairman; W. J. Hetherington, treasurer; E. T. Rathbone, secretary. Mr. E. M. Trowern, 21 Richmond street west, Toronto, is the provincial secretary, and has charge of the organization work. Any retail lumberman wishing further information concerning the organization can obtain it either by writing to Mr. Trowern or to the Editor of the "Canada Lumberman."

The Art of Making a Sale

Of all the problems that concern a lumber salesman, the actual conduct of a transaction is the most difficult. Having come into contact with a possible customer, how can he be converted into an actual purchaser? Here are the ideas of an experienced salesman, prepared for the benefit of his fellows:

First, get a customer's attention. Second, know your goods. Third, believe your goods, for if you know them as you should you will believe in them. This company does not think it is buying worthless goods. The receiving of goods will be told by someone else, also advertising them; but the man who can only sell one kind of lumber from a certain section of the country is no salesman and should not labor under the impression that he is. Every kind of lumber is used to build with in the place where it grows, and is all right for the use for which it is manufactured. Not only that, the poorest is used at home and we receive the best of the product. On this point I have to say frankly, if you don't sell the lumber we furnish you the fault is in you, for I can produce the proof that what a community demand to a large extent is what the agent thinks is the best. For instance, when one of our men tells me he cannot sell a certain class of drop siding because "the paint won't stick to it," I know that instead of getting posted and exploding that foolish notion he has allowed the customers to make him believe it himself.

The man who really sells goods because of his personality and salesmanship talks very little about those goods, for the reason that he is alive and posted on the quality and adaptability of his goods when received. By being thus posted and believing in what he has to sell he approaches his customers with an air of positiveness and confidence.

Watch him sell goods. The conversation is ,"Have you this or that?" "Yes, sir," in a positive manner, and in nine cases out of ten they are soon loading up, but they are talking about the pigs, cattle, horses, latest topic, and the last thing you would hear those two fellows discussing would be the knot-holes. In selling be positive, "What else can I show you?" not "That is all, is it?"

The salesman knowing the intricate processes which the goods go through before reaching their perfect state in which he is offering them to the customer, never allows the price to stand out between them, as the man in selling the watch told his customer how many million hair springs a ton of that especially prepared steel would make, also how many miles long they would be if placed end to end; then giving him a glass for his eye had him look into the watch, and when seen with a glass, on account of the beauty and perfection of the watch, the customer marvelled that it could be sold so cheaply.

When a customer comes in who is strong on the catalogue house proposition, don't go into a panic for fear of his supposedly low price. The catalogue house prices are only low on account of the quality. Remember that here is the hardest proposition in our business. Unless you have a friend (a third party) who will say a word for you and your goods it is up to you to know your goods so well and be posted on the other fellow's so thoroughly that you can show him where the difference lies. There has been too much of meeting the catalogue house price regardless of quality. They are not cheap where quality of goods is considered and this brings us back to what I want to impress upon you, that with the proper acquaintance, personality and standing in your community you will be able to show customers these things so they will believe what you say and see things as they are.

A report from Fernie, B.C., relating to the business outlook in the Crow's Nest Pass, states that the market for lumber looks exceedingly encouraging.

*Read before Western Retail Lumbermen's Association.

Burns Saws

A Lumberman from Ottawa Valley writes us as follows:

DEAR SIRS:

The Solid Tooth Saws I purchased from you last spring have been doing first class work ever since. I have never had any trouble with them. The Burns Saws are the best, as they are evenly tempered and will keep an edge longer than any other make of saw used here. Yours truly.

N. B. Principals only. 9

Overhead Drive

Although much has been said and more has been written commdemning this absurd and antiquated method of transmitting power to machinery in general, and woodworking machines in particular, says, J. M. N. in "Timber", still there are few shops or mills even now that do not furnish us with at least one example of overhead drive. Quite apart from the fact that it is bad for the belts and very bad for the brushes, and for the quality of the work, there is more danger attached to it, as I have reasons to know. Let me recall a few instances of misfortunes from actual experience with this particular drive. The machine in question was a large plain driver from countershaft on roof by two 4 in. belts, one on each end of the plainer cylinder. The striking gear was also fixed on roof above machine. It will be quite easily seen that belts running to such disadvantage had to keep fairly tight, or they would not pull their load. Well, those belts break now and then (nothing unusual in that), but running at such a high speed they wander about a bit, like a snake in agony, and then lie down. Once or twice they have dropped into the mouth of a planer and got mixed up with the revolving knives. That is bad enough to have a good belt chewed to pieces, but when the metal fasteners come in contact with the cutters, there is something doing, and to make matters right you require a few feet of belting and take off cutters for regrinding. On one occasion, a belt dropped from striking gear on roof; this also got mixed up with cutters, with dire results to both, also to lips of cylinder, which had to be replaned to get the kinks out. This example has convinced me that overhead drives will not do for that machinery any more, although, I am sorry to say, we shall have our pediodical display of fire-works in the future.

Ravages of the Mistletoe

It is reported that the common American mistletoe has attained such abundant growth in the States of the Southwest, especially along the southern border of the great arid region, as to be an actual pest to tree growth. It is a fortunate fact that this parasite thrives best in intense sunlight, for in that way harmful growth is limited to trees leading isolated lives. As a consequence, the damage to forest growth is negligible, as there the moist, shady conditions force its succesful germination to the topmost branches of tall specimens; its ravages are confined almost wholly to shade trees. This parasite is unique in that it has green foliage, and as a consequence merely steals undigested food of its host and not the elaborated product, as is usually the case with parasites. The mistletoe seed is encased in a pasty substance which causes it to stick to any body on which it is deposited. Its germination seems to be general on all species of tree growth. To germinate, the seed must fall in some wound in the bark of its host, and with this start the dissolvant enzyme contained in the root tips soon forces a channel to the vitals of the tree. Once well established it is only a question of time when the growth will sap the life, first of the limb on which it lives and then, if the growth is abundant, of the whole tree.

Big Pennsylvania Tree, 325 Years Old

Recently the largest tree in Winslow township, Jefferson county, was cut down. It was located in the Paradise settlement. When lying down it was found that its height when standing had been 140 feet; spread of limbs, 72 feet; distance to the first limb, 36 feet. It was 5 feet through seven feet above the ground. The tree was an elm. According to the annual rings it was between 320 and 325 years old.

Mahogany Tree Rings

H. N. Thompson, conservator of forests for southern Nigeria, says that in his observations he has noticed that mahogany trees grow three or four rings each year, corresponding to the four seasons. Both forest trees and those grown in the botanical garden exhibit the same phenomenon. On the site of the town of Ijaye, destroyed sixty years ago, a forest has grown up containing mahogany trees with trunks exceeding 10 feet in girth.

Match Trade of Norway in 1909

The production of matches in Norway for 1909 amounted to 60,000 or 65,000 cases, of which one-sixth were taken by the home consumers. The export markets were dull during the first half of the year, and sharp competition between overstocked factories resulted in lower prices. The general strike in Sweden and the strong demand from Germany, prior to the introduction of the new match tax, bettered the situation considerably during the summer. The stronger tone resulting from the cleaning up of stores at that time has been kept up since then. Whether or not this will be the case during all of the new year, is, however, impossible to tell as yet. There are signs which seem to show that production and consumption will in the future be more uniform than they have been for some time, especially this may be hoped in the case of first class goods.

The Johnston Lumber Co.,
John Street, Toronto

Review of Current Trade Conditions

Ontario

The uncertainty relating to the tariff situation has given quite a stimulus to the export of lumber from Ontario during the past fortnight. Many United States buyers have been in Ontario lately making extensive purchases, which are being shipped across the border as fast as possible. The purchasers of this lumber have nothing to lose in case the maximum duty is not imposed, as the markets for white pine in the United States are very active. On the other hand, in case the maximum duty is imposed they will be gainers to the extent of the duty on all that they are able to obtain. One large firm of Georgian Bay manufacturers made a sale of half a million feet of white pine mill run, mill culls out, and obtained the price they were asking. The same firm made extensive sales of lath. In one day they disposed of fourteen cars of lumber and lath. All these shipments are given the preference in despatch, so that they may not be held up until it is too late. The firm referred to above, had to make considerable increases in its shipping staff in order to handle the temporary rush. This extra business has cleaned up their stocks of two lines. It is reported that the same conditions are prevailing among a number of other manufacturers. One large Philadelphia firm recently had its representative in Toronto looking for stocks. He made an offer of $4 in advance of last year's price for white pine strips, but could not secure stock at that price, as manufacturers were asking $2 higher still. If it were not for this feature of the trade it is thought that the lumber business would be a little bit slow.

Travellers report that the retail trade throughout the province is looking very bright and that stocks in the retail yards are diminishing. White pine in all thicknesses of shop lumber and better is exceedingly scarce and is being held at a premium.

At Ottawa, the manufacturers continue to call for high prices for white pine, and in some of the scarce varieties the price has advanced a little. 2-inch white pine good sidings are so scarce that they can hardly be secured at all. There is an active trade in pine, good shorts and strips over 1-inch. The price of shorts is about the same as that for siding Mill cull strips and sidings, 12 feet and up, are firm at $16 to $18.

Eastern Canada

The mild weather has continued during the month of March in New Brunswick. Everywhere there has been snow it has not been suitable for hauling. Latest advices are that logging operations will come to an end very shortly. It is feared also that the early spring weather will result in the spring freshets being much smaller than usual and thus interfere with the drive. The mills at St. John will be about a month later than usual in starting up.

The market for spruce lath is still fairly active, though nothing of any importance is occurring. Stocks are disappearing quickly, amounting now to only about 1¾ millions on the wharfs. Shipments of lath during the last month have been fairly heavy, probably the lath will all be cleaned up before the mills resume manufacturing. Dutiable spruce laths at present are quiet, at from $2.75 to $2.85 on the wharf at St. John. Trade in cedar shingles is quiet. The winter shipments have been light. St. John dealers are holding their stock in the expectation of a better demand with the opening of spring trade. Stocks at present at St. John amount to 2,000,000 "extras" and 1½ million "clears," for which the prices are from $2.55 to $2.65 for dutiable "extras" and $2.05 to $2.15 for dutiable "clears."

The spruce market at Boston is improving considerably of late. Prices have become quite firm. Manufacturers are asking higher prices for frames, 9-inch and under. The minimum price asked is about $23.50 A fortnight ago it was difficult to obtain this price. A few manufacturers are asking and securing $24 There is not much call for random, but it is expected to become active shortly. Spruce boards are still quiet but are slightly firmer in New York. The spruce market is quiet, but the building situation is improving. Shingles are still dull at Boston, cedar extras cannot be sold at more than $3.50, and it is difficult to obtain this price. The demand for lath is also quiet, but holders are inclined to stiffen their prices. Several holders are asking $3.90 for 1⅝-inch, but $3.80 is nearer the market. Prices for 1½-inch vary from $3.45 to $3.50, but the trade is quiet.

Great Britain

The trade returns for Great Britain show for the month of Febraury and for the two months ending with February, the quantity of lumber landed was greater than during the corresponding period of 1909. The trade returns in general give every reason for confidence in the future, showin, in almost every case, considerable increases.

In London the lumber business continues rather quiet but the fine weather which has recently prevailed has given it somewhat of a stimulus. The demand shows signs of improvement especially in deals. The quantity of business transacted is considered quite satisfactory and prices are well maintained. At Liverpool the general inquiry for lumber has been fairly good, but actual orders are not so extensive as would be wished. It is reported that the Liverpool market is at present flooded with ash logs on consignment which are being offered at less than similar logs which are arriving on contract. Good hickory logs are very scarce at present. Several sawmills which have been running short time are now again on full time. There has not been any heavy buying in pitch pine sawn logs, as shippers are holding out for a higher price. There is good demand for 12x6-inch pitch pine. The spruce market at Liverpool remains firm and stocks are low. Prices for all dimensions on the spot remain stiff. Many of the stocks have run out of the favorite sizes. Long length deals are particularly scarce.

At Manchester the timber and building trades are fairly active but prices are none too satisfactory. There is little disposition on the part of the sellers to make any concession. At Glasgow the trade conditions are not quite so satisfactory as a short time ago, and the quantity of trade has fallen off slightly. It is believed, however, that prices are likely to hold, and even to increase considerably. It is usual at this time of year to report a considerable number of contracts fixed for future delivery, but this year the enhanced idea of values by Canadian and United States shippers has contributed to keep down the number of such engagements. It remains to be seen whether this will be counteracted by heavier consignments later in the season.

United States

Seasonable improvement is reported in the trade situation at Chicago. Prices are showing a tendency towards advance. Stocks of northern pine at Chicago are in strong hands. No. 2 and better are as strong now as they ever have been. The trade in white pine is good. The demand for the upper grades is excellent and the lower grades are improving. It is reported that the winter stock of good pine is running low. At New York the trade in white pine is moderately good. Stocks are rather small and prices are satisfactory, but the market is rather dull. The hemlock market at Chicago has opened in much better condition than a year ago The advanced prices are well maintained. The improvement in yellow pine has assisted the hemlock market. At New York and Boston the demand for hemlock is rather quiet. Southern pine at Chicago is im-

Your Spring Requirements

We would like to quote you on yard stock or to submit you figures on special bills. We have long made a specialty of cutting special bills to order and have this down to a science. If you want work of this kind properly executed, try us.

We can furnish anything you need in White Pine, Norway or Fir—any length from ten feet to sixty feet.

Cleveland-Sarnia Saw Mills Co., Limited

SARNIA, ONTARIO

proving. Timbers are exceptionally strong and there is a better tone in the demand for finish.

The movement of shingles at Chicago is improving steadily. Clears are selling at $3.45 and "stars" at $2.89. White cedars are quiet but prices are steady. There is a good demand for lath and they are firmly held. At Buffalo, shingle dealers find the trade improved by the open weather. The demand is fairly active and the indications are that prices will be firmer.

Shortage of stocks is about the only unsatisfactory feature of the hardwood market at Chicago. In other respects everything is very satisfactory. Plain oak is in excellent demand and stocks of rock elm, soft elm, birch and maple are short. Basswood is rather dull. Maple flooring is firm and in good demand. At Cincinnati the hardwood market continues satisfactory.

Market Correspondence

Manufacturers Keep Prices Firm at Ottawa

Ottawa, March 22—This is the day which by long practice has come to be regarded as the season's end to Ottawa valley shanty operations. The many thaws during the winter kept lumbermen in a state of anxiety lest roads should break up before the bulk of the logs were hauled out. With McLaughlin Bros., of Arnprior, this did happen, but in most instances conditions were more favorable to log-making in the woods than would seem from the dearth of snow and frosty weather in the more settled districts down the Ottawa river. The Shepard & Morse Lumber Company report no serious hindrance to lumber operations from the mild weather.

The firm attitude of manufacturers in respect of upper grades of white pine has forced prices up a few notches in the scarce sorts. Two-inch white pine good sidings can scarcely be procured locally. One of the largest producers of this stock told the "Canada Lumberman" to-day that he could not quote as low as $60, although that was considered to be a fair maximum quotation. It was a reasonable price he admitted, but when the lumber could not be bought, customers naturally had to offer more. Pine good shorts and strips over 1-inch are buoyant, and quotations show an upward tendency. For all thicknesses the prices given for shorts are about the same as for sidings. 1¼ and 1½-inch good strips are firm at $45, and the same price has been paid J. R. Booth for good shorts of similar thickness. 2-inch stock of this class is $5 higher, and is scarcer on the local market. Shipping cull strips and shorts are quoted a little higher than early in the month, in the thick sorts. 2-inch shipping cull shorts brought $24 last week, or as much as strips, including 1¼, 1½ and 2-inch. A number of orders have been placed with J. R. Booth by local wholesalers, agreeing to take certain lines of his output at whatever price he finds the market conditions to warrant. Wherever Mr. Booth has declared prices they confirm the announcements in the "Canada Lumberman" to the effect that lumber would advance 10 or 15 per cent. The dead culls in Mr. Booth's mill are assorted, 7 inches and up, and in lengths of 12 to 16 feet, and buyers are willing to pay a dollar or more a thousand for them than for the cuts of mills containing a large percentage of narrow and short boards. In Hull and Braeside local dealers have bought dead culls, but with an average of one-third short lengths. The prices are based on the method of sorting. Some very poor dead cull stock is held in the Ottawa valley, however, which middlemen will not ask their customers to accept, and this could be bought in large quantities at a low price. One dealer told the "Canada Lumberman" that he would like to get rid of dead culls and mill culls at a few dollars less than cost. He also sold lath below cost a few months ago. Both were bought at the high 1907 prices. Lath has since advanced almost to what it stood at during its best period.

Some of the manufacturers find it advantageous to sort mill culls in shorts, 1-inch by 4 and up, 6 feet to 11 feet, which variety is worth the same as the selected dead culls. Mill cull strips and sidings, 12 feet and up, are firm at $16 to $18, and are in active demand.

Lumbermen figure on an early start with the drive. The men who were hired for the regular shanty work will in most cases be available for river work, although the rule with most companies in hiring is to leave the men free to elect for themselves in the spring. It has been found that many good hands do not want to bind themselves so far in advance, although they are usually willing to remain when the spring arrives. The record high water of last season resulted in clearing the river of most of the logs. With the exception of a lot of timber on the Kippewa, nearly all the logs were advanced to the main stream last year. When the drive closed last autumn, all the 1907-8 logs were in the lower waters of the Ottawa river, and the cut of 1908-9 was landed in the Ottawa river and brought out of the Temiskaming waters. When the mills closed last year there were more than the usual number of logs en route, so that there is no danger of a scarcity of material, even though some logs are left in the bush owing to the mild winter.

The fear of a tariff war with the United States is expected to further enhance prices according to local opinion among the lumbermen. Should there be no friendly settlement of the tariff problem, the lumber industry is likely to go ahead without disturbance, judging from all outward appearances and the views expressed cautiously by lumbermen. They prefer, however, not to discuss the critical situation at present. Senator W. C. Edwards, Mr. J. R. Booth and Mr. Peter Whelen, three stalwarts of the Ottawa valley lumber industry, have declined to give the press their views as to how the lumber trade would be affected by an adverse American tariff. However, Mr. Booth, in an interview, reaffirmed his belief that Canada should not let its raw material leave the country without getting a return. This return would appear to be an open market for Canada's manufactured paper and lumber. Mr. Booth stated that the view of the lumbermen was that the Government should place a duty on American lumber coming into Canada if the United States taxed the Canadian product. He added that England, South America, Japan and New Zealand were prepared to take more and more of Canada's paper and lumber, but declined to give an estimate of the possible loss to Canadian lumbermen by having a 25 per cent. ad valorem duty added to the existing barrier against Canadian lumber crossing the border.

N. B. Mills will be Late in Starting

St. John, N.B., March 24—The month of March has so far seen a continuation of remarkable weather conditions throughout New Brunswick. The weather has been unseasonably warm since the 2nd or 3rd, in a great section of the province the snow has entirely disappeared, and where there is snow it has been unfavorable for hauling because of the slumpy condition of the swamps and lakes. From Fredericton south there has been practically no snow since the 12th. Reports on or about that date tell of two feet of snow on the Tobique, three feet at the head of the Aroostook, from three to four feet on the St. Francis, and two and a half to three feet along the Restigouche. The snow has been melting rapidly, and it is generally thought that a complete cessation of operations will come early. The early setting in of spring has been particularly hard on the smaller log operators in the lower part of the province, who were obliged to cease work when the snow went, leaving quantities of logs in the yards. In the more northern portions the snow stayed longer and the work of hauling went on.

Local lumbermen who have logs to be driven from the far up-river districts are somewhat uneasy in regard to the prospects for stream driving. It is feared that, with the warm weather coming so early, the snow in the woods will melt gradually and that, consequently, when the freshet season arrives, there will be no snow to melt to give a good volume of water for driving. For this reason all interested are hoping for more frosty weather, a week or two of which would change the aspect of things in this respect.

The manufacturing season at the local mills is at least a month late this year. None of the mills have yet started and there will be little doing until the ice is out of the storage booms at South Bay and other points, except in the case of one or two mills the owners of which have some logs outside the booms, where they are more easily available. Stetson, Cutler & Company will begin sawing at their Pleasant Point mill and also at Indiantown during the first week in April. A. Cushing & Company will start their mills about the 3rd of April, and Murray & Gregory about the same time. These will be the first mills to begin sawing. Others will begin when the booms are open, between the 15th and 20th of April, while a number will not get started until the first of the new logs arrive from up-river, which will be about the middle of May. At present there are no mills sawing.

Local trading in spruce lath continues fairly brisk, although devoid of any exceptional features. With none being produced, local stocks of spruce lath are dwindling rapidly, and at present writing there is not more than from one and three-quarter millions to two millions to be seen on the wharves. There have been some fairly heavy shipments of lath during the last month, and the probabilities are that this line of goods will be entirely cleaned up before the mills make a start. The present local value of spruce laths, dutiable, would be from $2.75 to $2.85 per thousand on the wharf at St. John.

The cedar shingle trade shows few features of interest. Shipments have been light all through the winter and particularly so during the past three weeks. With the light local holdings this circumstance is taken as an indication of the ability and willingness of local dealers to hold their stocks until the spring has brought an increased demand and probably better prices. At present writing local stocks would total to two millions of "Extras" and one and one-half millions of "Clears." Upon these an enquirer would be quoted at $2.55 to $2.65 for the better grade and at $2.05 to $2.15 on the "Clears," dutiable goods, f.o.b. St. John.

The opening of the Quebec Legislature took place on March 15th, and the speech from the throne stated that the foundation of a school of forestry would be authorized. Premier Gouin stated that an order prohibiting the export of pulpwood would be ratified during the present session and would become operative on September 1st.

Canadian Factory, :: **Hamilton, Ont.**

Hanchett Band Swage

Filers! Mill Men!

Success in lumbering depends upon the extra large cuts over the regular cuts, and turning out better lumber. In other words it is turning out more lumber at a less cost. Now our specialty is labor saving machinery for the care of saws. We manufacture all kinds of machinery and tools for the care of saws. One of our best tools is our Hanchett Swage. This tool presses the tooth widest on face, widest at extreme corners, and tapers the tooth downward and backward. Our swage shaper then presses the tooth to an ideal shape and each tooth exactly alike thus doing away with a great deal of filing and making a stronger and better cutting tooth.

Lumber Matters in the Law Courts

The Meaning of "Government Standard" Ties—Loss of Logs Causes Dispute—Interpretation of Contract

Contract for the Sale of Railway Ties, etc.—In the case of Hallisey v. Musgrave, which was recently tried in the full court of Nova Scotia, the question at issue was whether the contract for the delivery of railway ties, involved ties of "Government standard." The matter was entirely one of fact, depending upon the terms of an agreement which had been made verbally and subsequently had been reduced to writing. In the lower court, judgment had been given for the plaintiff to the effect that the ties were not specified as of "Government standard ties." The contract called for 2,000 ties, and two carloads were supplied and paid for without any question arising, the balance were supplied and payment made on account, and a portion of these were not in size up to the standard. The plaintiff alleged that he closed the contract verbally and did not agree to Government size. The defendant claimed that a letter sent subsequent to the verbal agreement, stating that the ties were to be of usual Government standard, regulated the contract. The court held that the contract had been for the supply of Government standard ties, and that the judgment of the lower court should be set aside with costs. The plaintiff was entitled to recover $112.67 with costs, and the defendant's damages on a counterclaim were fixed at $100.

Contract for the Sale of Logs—The case of the Royal Bank v. Schaffner & Company, which was recently heard in the full court of Nova Scotia by Judges Drysdale and Meagher, has been decided in favor of the defendants. The case was an appeal from judgment in a lower court to recover balance claimed in connection with a logging transaction. The question at issue was whether the quantity of logs delivered exceeded or was less than 500,000 feet, the quantity mentioned in the agreement. The evidence showed that the total had been short of 500,000 feet by about 85,000 feet. The defendants had already paid $2,125.74 out of the total of $2,500 which would have been due for the 500,000 feet. The shortage in the quantity delivered reduced the account so that Prince, who had contracted to deliver the logs, would be entitled to collect $3.39, provided no deductions were made for other causes. It developed, however, that Prince had broken a contract to saw and haul the logs and that the defendants, being obliged to have this work done elsewhere. had suffered a loss amounting to $300. Accordingly the Royal Bank, to whom Prince had assigned his claim, were not entitled to any payment from the defendants, and judgment was given accordingly. A further claim, relating to some supplies and work furnished by Prince in respect of another quantity of logs, was also dismissed by the court, inasmuch as the supplies and work had been furnished on a joint venture, in which Prince was to share either in the profit or the loss. There had been a loss on this transaction and the court had decided that the most that Prince was entitled to was an accounting.

Action for Loss of Logs—The Dominion Paper Company, of Kingsey Falls, Que., are suing Barney Quinn for $13,000 on account of a large quantity of their logs which went out of Nicolet river. It appears that the wood of the plaintiff and the defendant went down the river together. When it arrived at the defendant's place it was sorted, and the wood of the plaintiff allowed to go down the river some ten miles. When the high water came last spring it carried the wood over the boom, and they now claim compensation from the defendant. The latter contends that he cannot be held responsible for the amount sued for, nor for the loss of the logs.

Forest Fire Record in the United States

Fire played less havoc in the woodlands of the United States National Forest States last year than it did in 1908, although the number of fires was 410 greater. The Department of Agriculture has just compieted the statistics. The protective value of the work of the department is shown in that (1) almost 80 per cent. of the fires were extinguished before as much as five acres had been damaged; (2) less than one and one-half acres to the square mile of national forest land was burned over; (3) and the amount of damage done to the burned-over area averaged but $1.26 per acre.

For the twelve-month ended December 31st last, there were 3,138 fires on the forests, 1,186 caused by locomotives, 431 by campers, 294 by lightning, 181 by brush burning, 97 by incendiaries, 38 by sawmills and donkey engines, 153 by miscellaneous and 758 by unknown agencies The area burned over was, in round figures, 360,000 acres, of which about 62,000 were private lands in national forests, as against some 400,000 acres in 1908. Some 170,000,000 board feet of timber were consumed, of which 33,000,000 feet were privately owned, as against 230,000,000 in the previous year. The loss in value of timber destroyed was less than $300,000, of which close to $50,000 was privately owned. The loss of the year before was about $450,000. Damage done to reproduction and forage shows a remarkable decrease, less than $160,000 being the record for 1909 and over $700,000 that for 1908.

The largest number of fires occurred in Idaho—991; but the great increase over 1908 in that State, namely, 573, is entirely attributable to fires in the Coeur d'Alene, which were extinguished without material damage. Locomotive sparks were accountable for 611 of the blazes in this forest last year. The explanation of the increase in the total for all forests is to be found in this Coeur d'Alene increase.

The Report of the Forester for 1909 said of the fire record of 1908: "That year was one of prolonged drought during the summer and fall, and of disastrous forest fires throughout the country. The national forests suffered relatively little.—About 232,191,000 board feet of timber, or 0.06 per cent. of the stand, was destroyed—A total of 2,728 fires was reported, of which 2,089 were small fires confined as a rule to an area of fire acres or less. The cost of fire fighting, exclusive of the salaries of forest officers, was $73,283.33. This sum, added to the proportion of the total salaries of rangers and guards properly chargeable to patrol and fire fighting, was less than one-twentieth of one per cent. of the value of the timber protected, estimated at an average stumpage value of $2 per thousand."

List of Belfast Importers

The Department of Trade and Commerce has commenced the publication of lists of the principal importers in countries in which Canadian trade commissioners are located. These lists should be of much use to Canadian manufacturers. In the latest issue of the weekly trade reports the following names of importers at Belfast are given, which will be of interest to Canadian lumber and wood goods exporters.

Deals, etc.—J. P. Corry & Company, Limited, 5 Great Georges street; Thos, Dixon & Sons, Limited, 105 Corporation street; J. McDowell & Company, 25 Great Patrick street; Robb Bros., 109 Corporation street; Irvine & Sellers, 7 Gamble street; Lytle & Pollock, 12 Dunbar street; D. Dorman & Company, 104 Corporation street; Ruddell. Harvey & Company, 58 Corporation street; McCue, Dick & Company, Riley's place; Stephens & Walkington, 8 Victoria street.

Pulp Board—Wm. Strain & Sons, Limited, Great Victoria street; McCaw Stephenson & Orr, Limited, Castlereagh road; W. W. Cleland & Company, Belfast; John Cleland & Company, Belfast.

Staves—Cantrell & Cochrane, Victoria Square; Mitchell & Company, Limited, 67 Corporation street.

Paper and Boxboards, etc.—P. O'Reilly, Limited, Poolbeg street; Cherry & Smalldridge, Limited, Seville Place.

Timber, etc.—T. & C. Martin, Limited, North Wall; R. Martin & Company, Rogerson's Quay; Thos. Dixon & Sons, Limited, East Wall; Brooks, Thomas & Company, Limited, Sackville street; W. & L. Crowe, Limited, South Richmond street; Thomas Archer, Wapping street.

How to Write a Business Letter

"How to write a business letter," is a matter upon which there are few people who would not be the better for a little advice. In a book with the above title, which has just been published by Gies & Company, of Buffalo, N.Y., the author, Chas. R. Wiers, of Buffalo, has set forth concisely and in an interesting manner, many of the salient points of letter writing. His ideas are those of the modern American business man, and are necessarily tinctured with American ideals, but the broad principles are those upon which successful business letter writing depend. They are set forth clearly and forcibly, so that in the greater number of instances they admit of no contention. A strong point is made of the common habit of using useless expressions, which have received the sanction of long use, but which mean nothing and are really only an encumbrance to letter writing and reading. This class of expression will be quickly recognized from a few examples, viz.: "We would say," "we beg to say," "allow us to explain," etc. These forms have arisen probably from a desire to improve the form of a sentence, or to introduce a subject gradually, but they have become meaningless, with long usage, and if one examines them critically they are worse than meaningless, as they are not sincere. Considerable stress is laid upon the necessity for brevity, courtesy, clearness correct spelling, sincerity, etc. An excellent feature of the book is a large number of examples of letters illustrating the ideas which are dwelt upon. The book itself is to be commended for following the suggestions it contains. It is brief, concise, clear and well arranged, so that it is sure to be of value to any business man.

The Grand Trunk Railway System have issued tariff I.C.C. No. 1,385, a competitive joint tariff in conection with the Delaware & Hudson Company and the Williams Line, applying on softwood lumber, lath and shingles in lots of four cars and over from Grand Trunk stations in Canada to New York, Brooklyn, Jersey City and other points reached by water from Albany, N.Y., via Rouse's Point and the Delaware & Hudson Company. Allowance is made for planing in transit at Rouse's Point, Whitehall, Plattsburgh or Albany, N.Y. The rate applies on basswood, hemlock, pine, spruce and tamarack, varying from 13 cents to 17 cents on lumber to New York and from 15 cents to 19 cents on lath and shingles to New York. For lumber under 6 feet in length, 2 cents additional, and for lumber 6 to 11 feet in length, 1 cent additional a hundred pounds will be charged over the lumber rate. An additional 1½ cents will be charged for thin lumber.

EDGINGS

Ontario

The Queen City Planing Mill, Toronto, Ont., has been burned out.

The Tobermory Lumber Company, Tobermory, Ont., are stated to have assigned.

John E. Williscroft, lumberman, St. Edmunds Township, Ont., has assigned to G. T. Clarkson.

The James McFayden Lumber Company, Dryden, Ont., has been succeeded by David Anderson.

Campbell & Carman, Toronto, Ont., wholesale lumber, have been succeeded by Campbell & Johnson.

Galbraith & Airth, Chatsworth, Ont., will move their sawmill and sash and door factory to Owen Sound in the near future.

Madden Brothers & Moore, 312 Queen street west, Toronto, have sustained a loss by fire in their planing mill and lumber yard. The damage amounted to about $5,000.

Eddy Brothers & Company, Blind River, Ont., are installing a new gang edger, which will increase the capacity of their mill considerably. They are also making improvements to their fire room.

The Ontario Gazette gives notice of the incorporation of the John Carew Lumber Company, Limited, Lindsay, Ont.; capital, $200,000; incorporators, John Carew and F. J. Carew, of Lindsay, Ont.

The National Bag & Paper Company, Limited, Ottawa, Ont., have been incorporated with capital of $200,000. The incorporators are: W. Anderson, J. F. Booth, lumberman, and W. H. Dwyer, merchant, all of Ottawa.

The White Pine Lumber Company, Blind River, Ont., have been making a number of improvements to their plant during the past winter. They have been installing a new engine, two new boilers, and a new trimmer, as well as a wooden one which was torn down. The improvements will increase the capacity of their mill at least 15 per cent.

Eastern Provinces

Corey & Campbell, Bedford, Que., sash and door manufacturers, have dissolved.

The A. L. Wright Lumber Company, Limited, Salisbury, N.B., have sold their assets.

Thomas MacKarell & Company, lumber merchants, Montreal, Que., have dissolved partnership.

The Rhodes, Curry Company, Amherst, N.S., have completed their contract of 500 box cars for the G.T.R. Work will be begun shortly on a contract for the C.N.R.

The British Empire Timber Company, Limited, Montreal, has been incorporated with capital of $1,500,000. The incorporators are: G. V. Cousins, accountant, and P. F. Brown, both of Montreal.

The lumber cut in Western Cumberland, N.S., this year will amount to nearly twenty million feet. The largest operators are J. N. Pugsley, C. I. White & Son, the Robinson-Wright Company, and S. P. Kelly & Sons.

J. W. Kilgour & Bro., Limited, Beauharnois, Que., capital $300,000, have been incorporated to carry on a lumber and timber business. The incorporators are John Wilson Kilgour and James Wilson, both of Beauharnois, Que.

The Quebec, New Brunswick Pulp, Lumber & Lands Company, of St. Antoine Abbe, Que., have been incorporated, with capital of $20,000. The incorporators are: Francis Toupin, contractor, and Rev. J. Brady, priest, both of Montreal.

Ten horses belonging to the firm of Gilmour & Hughson, Hull, Que., were killed by lightning as they stood in their stalls at one of the company's camps, 80 miles north of Maniwakh. The horses were all good animals, and the loss is estimated at nearly $2,000.

Wood from New Brunswick will soon be exported to Bath, Maine, to be made into pulp. The mills are ready to start, and four barges have been chartered to bring the lumber down the Great Salmon river and down the coast and thence up the Androscoggin river.

The News Pulp & Paper Company, which was incorporated last fall for the manufacture of pulp and paper, has taken over the St. Raymond Pulp & Paper Company, which went into liquidation in 1909. The News Pulp & Paper Company is now busy installing additional machinery for the manufacture of pulp, and it is expected that the paper mill will be started about the middle of April.

Application will be made to the Quebec Legislature for the incorporation of a company to be known as "Donald Fraser & Sons, Limited," with a capital of $250,000, to carry on a lumber manufacturing and selling business. The applicants for incorporation are Donald Fraser and Archibald Fraser, lumber merchants, of Fredericton, N.B.; Donald Fraser, jr., lumber merchant, Plaster Rock, N.B.; W. Mattheson and A. Brabner, of Cabano, Que.

Western Canada

H. G. Wyatt, Armstrong, B.C., has sold out his sawmill to T. K. Smith.

The Galvin-Watson Lumber Company, Limited, Wadenap, Sask., have been succeeded by C. A. Carpenter.

The Graham Sash & Door Company, Winnipeg, suffered a loss of $30,000 by fire in their lumber yard recently.

The Export Lumber & Shingle Company, Limited, of Vancouver, B.C., have recently removed their head office to 712-713 Dominion Trust Building in that city.

The city council of Victoria, B.C., have recommended that the contract for paving blocks be awarded to the Michigan Puget Sound Lumber Company, the lowest tenderers.

The B. C. Gazette gives notice of the incorporation of the Cedar Cove Sash

& Door Company, Limited, capital $15,000; and the Okanagan Lake Lumber Company, Limited, capital $100,000.

The British Columbia Gazette gives notice of the incorporation of the following companies: John R. Bowes Timber Company, Limited, capital $10,000; The Howe Sound Timber Company, Limited, capital $50,000.

A tie mill, which will employ about 40 men, is being erected about three miles east of Yahk, B.C., by Chas. Biesel, superintendent of the Snowshoe Mine. The mill is to be portable and operated by electric power.

Mr. F. L. Buckler and a syndicate of Vancouver people have purchased 1,300 feet of water frontage at $70,000, and intend to erect a lumber mill thereon. It is reported that the mill will be one of the largest in the district.

A Victoria despatch states that 47 square miles of timber at Quatsino Sound have been sold by W. B. Garrett, of Victoria, B.C., to K. Eade, of Vancouver; J. Montgomery, of Texas; J. W. Britton and B. A. Siger, of Seattle, for $175,000.

On March 23 the second auction sale of timber berths in the Westminster district was conducted by Timber Agent Leamy. The berth to be sold was No. 533, located to the east of Lillooet lake. It comprises four blocks, containing 683 acres. The upset price was $6,044.93.

Fifty men are engaged and a 24-hour shift is being worked at the British Canadian Wood Pulp & Paper Company's plant at Port Mellon, B.C. The output at present is from eight to ten tons daily of wrapping paper. In the near future it is expected to increase this to 40 tons.

Owing to the deep snow the Elk Lumber Company closed down all their logging camps temporarily early in March. The past season was favorable for logging and a large cut was made. The Fernie Lumber Company also ceased operations in the woods at the same time.

The heir to an Irish estate worth $1,250,000, a young man named Lloyd, has been located by a detective especially sent out from Ireland, at the logging camp of the East Kootenay Lumber Company, near Aldridge, B.C. The young man, who had quarrelled with his uncle, came to Canada to make his own living. He is 24 years of age and will return to Ireland at once.

The Lieutenant-Governor of British Columbia has signed an order of cancellation on four timber licenses covering property valued at from $100,000 to $150,000, which belonged to J. S. Emmerson and the Emmerson Lumber Company, of Vancouver. The Government took this step as a result of evidence to the effect that logs from these limits were being exported to the United States.

Work has been commenced on the erection of a new sawmill for Mr. John Hanbury, of Brandon, on False Creek. The plant will be installed under the superintendence of Mr. Charles Kendall. The plant will consist of a sawmill, a planing mill, sash and door factory, and three dry kilns. It will be the first mill of its kind to be erected in British Columbia, being what is known in the east as a "short-log" mill. The plant will cover a space 400 feet in width by 600 feet in length and there will be in addition retail yards and business offices. It is expected that the entire cost of the plant will be $200,000. The Hanbury Manufacturing Company, of Brandon, Man., are also increasing the capacity of their plant.

In connection with the purchase of 70,000 acres of mining, lumbering and agricultural lands in British Columbia by H. J. Rossi, of Idaho, which was reported in the last issue of the "Canada Lumberman," it is further reported that the purchasers intend to build a railway 116 miles long, connecting their new properties in Cariboo, B.C., with Barkerville, and also to build a number of new mills to handle their timber interests. Their plans have already been considerably advanced. A town site, which is to be named Fraser City, has already been planned, near the junction of the Salmon and Willow rivers, with the Fraser. An extensive logging railway will also be built in connection with the saw and planing mills, and it is probable also that they will erect a pulp mill.

Trade Enquiries

The Dominion Government Trade and Commerce reports contain the following trade inquires. Readers of the "Canadian Lumberman" may obtain the names of enquirers by writing us, enclosing stamped envelope and stating number of enquiry:

419. Wooden Handles.—A London firm of importers ask to be placed in communication with Canadian manufacturers of wooden handles of all descriptions and also of household woodenware.

423. Pine pickets.—One of the largest firms of timber and wooden goods importers in England is open to purchase large quantities of pine pickets of Canadian manufacture.

433. Carts and carriage stock.—A South African firm desires to be placed in touch with Canadian exporters of carts, carriages and carriage stock, including wheel rims, hubs, spokes and felloes.

452. Wood pulp.—A German firm wishes to purchase supplies of Canadian wood pulp, and would like to hear from exporters in the Dominion.

462. Pine boards.—A Manchester firm asks for dimensions and prices of pine boards from Canadian exporters of the same.

464. Spruce lumber.—A Lancashire firm desires to correspond with Canadian exporters of spruce lumber.

465. Laths.—A Manchester firm asks for dimension and prices of plasterers' laths from Canadian exporters.

466. Pick handles.—A Manchester firm asks for sizes and prices of pick handles from Canadian manufacturers.

467. Spruce battens.—A Manchester firm wishes to correspond with Canadian exporters of spruce battens.

468. Spuce deals.—A Manchester firm desires to obtain dimensions and prices o fspruce deals from Canadian exporters.

469. Pine deals.—A Manchester firm asks for prices of pine deals, 1st, 2nd and 3rd quality, sizes 3-inch x 7-inch, up to 10-inch, from Canadian exporters.

470. Birch lumber.—A Manchester firm asks for dimensions and prices of birch lumber from Canadian exporters of same.

476. Cornice poles.—A Manchester firm asks for catalogues and prices of cornice poles from Canadian manufacturers.

479. Pine pickets.—An English firm of wooden goods importers are in the market to buy pine pickets in sizes of 48 inches by 1⅛ inches by 1¼ inches; also 50 inches by 1¼ inches by 1¼ inches; prices and particulars desired from Canadian exporters for shipments to Newcastle-on-Tyne.

481. Agency abroad.—An English firm of timber agents, having branches in Paris and Antwerp, would undertake the agency of a firm exporting spruce, maple, pine and other Canadian timbers. References and all other information furnished.

MANUFACTURERS OF QUALITY LUMBER AND SHINGLES

Many a Shingle has been Counted Out

You don't have to take the count when you buy

Fenderson's N.B. Cedar Shingles

If you must fight for business, why not have the proper things to fight with. If you are selling shingles why not handle a shingle that will help sell itself. That's the kind we are manufacturing; it's the most satisfactory kind for us, the most satisfactory for you. No need of handicapping yourself and your business with an inferior article. **BUY FENDERSON'S**

because we give you the count as well as the best grade of Shingle you can buy.

Remember:—
If It's Fenderson's—It's Right

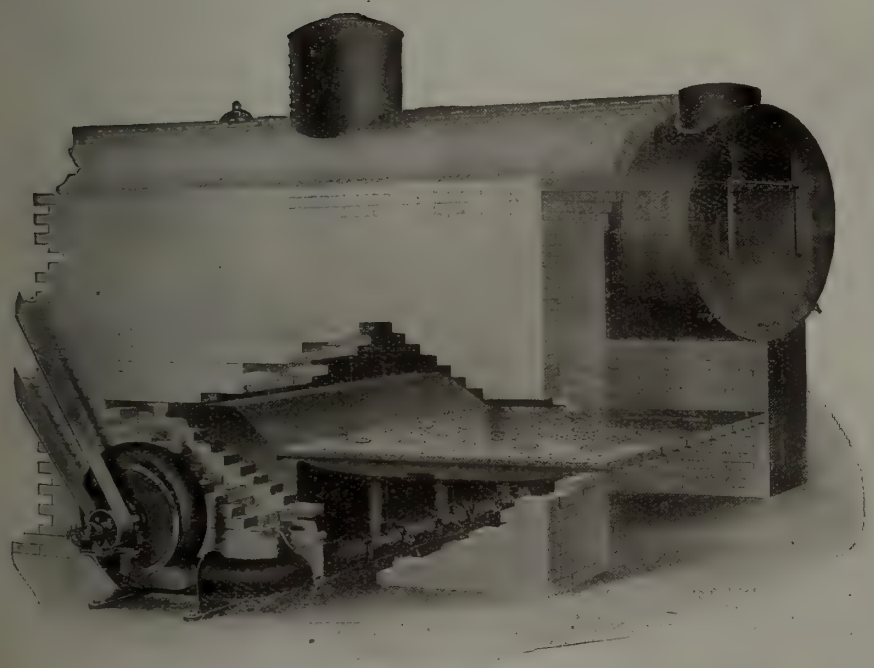
BERLIN MACHINE WORKS, LTD. - Hamilton, Canada

RESULTS ARE WHAT COUNT

A Combined Skidding and Loading Machine that will clear up the largest area at a setting and can be moved and set up in the shortest possible time will get the best results.

The latest Russel machine has some distinct features that save time and trouble, consequently money. Note the new method of suspending skidding sheaves. They are hung from a vertically hinged jib or triangle, the outer end of which is guyed by two lines one on each side, which are power-tightened and can be set while skidding lines are going out. The guy lines lead back so they do not interfere with skidding or loading. The uppermost leg of the jib has a spring connection to the tower, reducing shocks. All

skidding strains are absorbed by the guy lines. The swinging boom is operated by wire ropes passing through sheaves suspended from a steel frame projecting from tower and leading to two drums on loading engine, controlled by one lever. Machine is raised or lowered by hydraulic or patented gear jacks. Built for 2 or 4 lines, with stiff or swinging boom, constructed entirely of steel, except loading boom. Is without question the strongest and fastest machine of the day.



RUSSEL WHEEL & FOUNDRY CO., DETROIT, MICH.

Are Your Boilers Overloaded?

If so, your cut is not what it should be

What Disposition are You Making of Your Sawdust, etc.?

Why don't you run your mill with it?

Are You Burning Your Slabs, etc.?

Why not sell them instead?

The old reliable Gordon Hollow Blast Grate increases the efficiency of a boiler 25% to 50%; gives as good or better results with wet, green or frozen sawdust than a draft grate gives with dry wood; saves labor in firing; and is practically indestructible.

Sold on Approval. Thirty days' trial given. We pay the freight both ways, if rejected.

Adapted for either sawdust or slabs, for plain furnaces or Dutch ovens, and for any number of boilers, from one up.

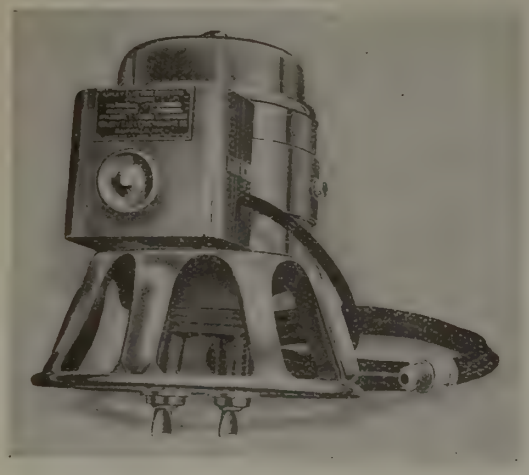
No change in construction required.

Easy to install.

Can be fired on when the boiler is idle.

We will submit a proposal upon receipt of the following data:

How many boilers have you?



Have you furnaces or ovens?

What are the width and length of your grate surface or surfaces?

Gordon Hollow Blast Grate Co., Greenville, Mich.

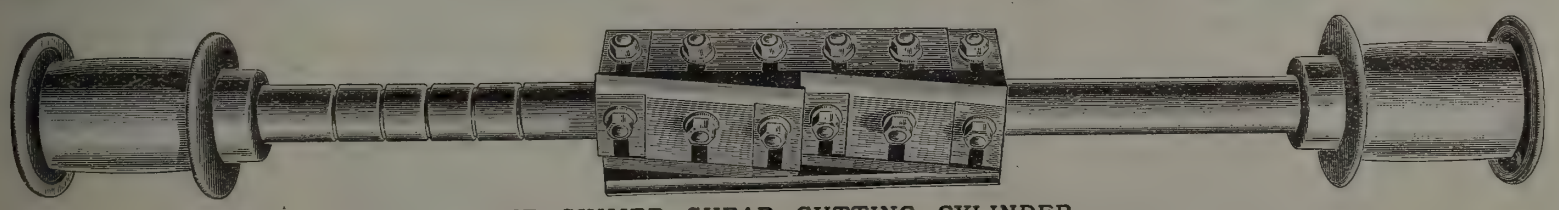
DUPLICATE ORDERS



Are the best evidence we have that the **SHIMER CUTTER HEADS** are all we claim for them. Poor Cutter Heads will work after a fashion, but the purchaser don't duplicate his order for more tools.

When you buy Cutter Heads you want in return the very best value for your money—tools that will increase output—improve quality—reduce cost of manufacture—that will last a lifetime.

The Shimer Steel Forged Cutter Heads are especially good and strong, have a perfect running balance, and because of their remarkably long life and low cost to maintain are the cheapest tools you can use.

Fitted with Circular Bits containing the "Shimer Make-Ready" you can maintain standard patterns from month to month by simply filing or grinding the Bits when dull and then setting them to the gauge we furnish.

THE SHIMER SHEAR CUTTING CYLINDER

Made to fit any Planing and Matching Machine, Saves Power, Material and Labor, besides putting a smooth surface on the lumber. The cut is made with first one knife shearing the chip in one direction across the face of the board, and is followed by the next knife which shears the chip in the opposite direction. This distribution of the work reduces jars on the machine and belts, gives smooth action, and results in better work.

Send for further information, and let us quote you prices. With your inquiry give us the length and diameter of your cylinder, stating whether you use one or two drive pulleys.

The dealer who accepts your order for the Shimer Cutter Head and supplies you with another meant to deceive you in no small matter. Look for the Name and Trade Mark "The Shimer Cutter Head" stamped on every genuine tool. Any other is spurious—send it back—demand the genuine, of quality and helpfulness, with a record of 40 years of upbuilding and improvement. It costs no more,

Branch of Milton, Pa. **Samuel J. Shimer & Sons,** **Galt, Ontario, Can.**

McDonough Horizontal Band Resaw Machine

The above cut herewith shows the McDonough Horizontal Band Resaw Machine. This is the most practical and efficient horizontal resaw manufactured. Equipped with saw wheels seven feet in diameter, weight 24,000 pounds; also built with sixty-inch wheels, weight 16,000 pounds.

We also handle smaller Resaws for factory use from 44 up to 60 inches. The Resaw is one of the best paying machines in the saw mill. It is a lumber saver. We are the sole Canadian Agents for this machine and we solicit your enquiries as to price and the work that it will do. At the same time, remember that we are builders of up-to-date Saw and Shingle Mill Machinery. We build Saw Carriages from $200.00 up as high as you like. Edgers from $125 to $1,250.00.

We also make Log Loaders, Kickers, Niggers and all the machinery for a first-class mill. Let us quote prices on anything that you want. Large or small orders will be attended to promptly.

This Saw Stands Without a Rival

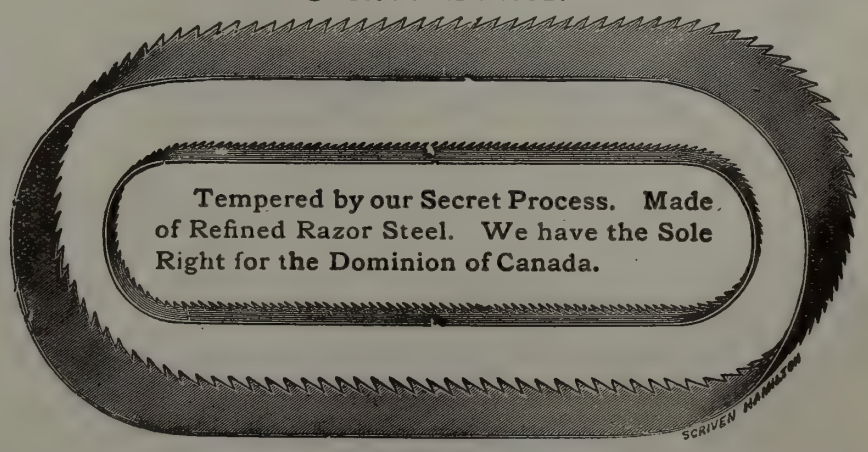
AND IS THE

FASTEST CUTTING SAW IN THE WORLD!

Its Superiority consists in its Excellent Temper. It is made of "Razor Steel," which is the finest ever used in the manufacture of Saws. We have the sole control of this steel. It is tempered by our secret process, which process gives a keener cutting edge and a toughness to the steel which no other process can approach.

Maple Leaf Saw Set

MANUFACTURED BY

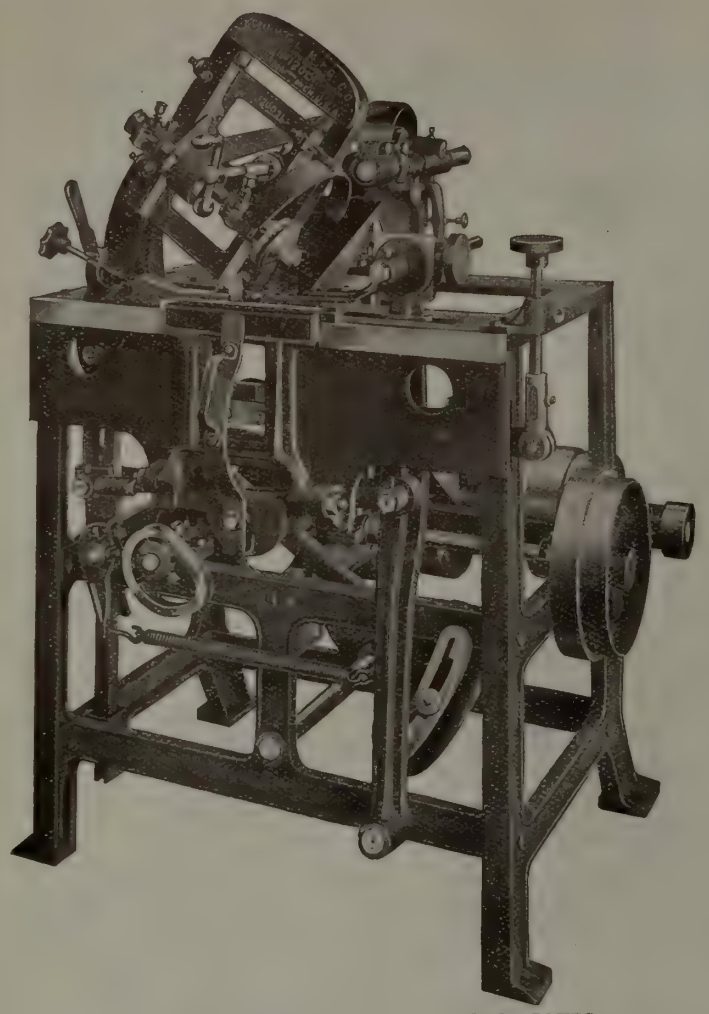


SHURLY & DIETRICH, Galt, Ont.

Directions.—Place the set on the point of tooth, as shown in the accompanying cut, and strike a very light blow with a tack hammer. If you require more set, file the tooth with more bevel.

If you follow directions you cannot make a mistake. Be sure and not strike too hard a blow, and it will set the hardest saw. **On receipt of 40 cents we will send one by mail.**

We are the only manufacturers in the world who export Saws in large quantities to the United States.



We Manufacture

HIGH GRADE BAND SAWS

Of All Widths and Lengths.

These Saws are made of Refined Razor Steel, and tempered by our Secret Process; for Fine Finish and Temper are not excelled.

NO. 120 MACHINE FOR 10 IN. BAND SAWS.

SAW MACHINERY

The Most Efficient Band Saw Sharpener Made

Equipped with **new automatic idler** bracket keeping the belt to the emery wheel at the same tension as it travels up and down. Idler pulley is located on slack side of the belt and can be adjusted in line with the emery wheel. Belt is held to same tension at all times by a large spring. There are **no flange pulleys** used on this machine, with the use of automatic idler the life of the belts is prolonged. **Head** is constructed with 60 degree angle shaped slides on both sides so that **wear can be taken up by adjusting one gib.** Every wheel arbor can be adjusted so that a straight wheel will do the same work as a concaved one. Head is adjusted to a 45 degree hook.

Saw rest is moved up and down by hand wheel at the right hand side of the machine, convenient for the operator. Adjusting screw is so placed that it **cannot become covered with emery dust.** The saw rest is made of self hardening steel and can be easily replaced. **Back feed** is of a new design and is strong, simple and effective. The adjustable eccentric cam on the cam shaft is connected to the long back feed shaft by means of a lever, this lever rocks the back feed shaft that moves the back feed arm. Back feed finger can be turned out of the way and allow saw to be lifted up without interfering, machine is equipped with an **adjustable cam.**

To those interested in the highest type of machinery of this kind we invite your inquiries and ask permission to send detail description.

HAMILTON

The Highest Development of the present day.

LONG'S SAW MILL MACHINERY

Records for Cutting Capacity unsurpassed.

4 Saw Lath Bolter

We build a full line of Lath Machinery, and will be pleased to submit full particulars on application.

This machine speaks for itself.

Improved Hot Blast Grate

This is the latest production in the line of Hot Blast Grates. With this grate the blast is evenly distributed over the whole surface of the grate so that when sawdust is being used for fuel, it requires little if any attention, as it is evenly consumed.

This is not the case with other styles of Hot Blast Grates where the blast is not evenly distributed.

Our Hot Blast Grate develops more heat from green, wet or frozen sawdust or mill refuse than an ordinary draught grate develops from wood or coal. Increases steaming power of boiler 50 per cent. It will save you money regardless of the kind of fuel.

We will ship our Hot Blast Grates to any reliable person or firm on 30 days' trial, to be returned at our expense if not as represented.

Style "B" for Mill Furnace

Catalogue Sent and Full Information Cheerfully Given on Application

The E. Long Manufacturing Co., Limited, Orillia, Ont.

SUITABILITY

You couldn't file a saw with a manicure set—neither could you use a hand machine to edge 8 in. and 10 in. Cants.

If you are running light stock on a heavy edger, half your machine is idling—you are wasting floor space and you are not getting full returns for your investment. On the other hand, if your machine is too light for your work—you are forced to crowd it—your saws will heat and bind and your lumber will be snaky and uneven—you suffer in both cases.

We have had 60 years' experience as Canadian Saw Mill Builders. We manufacture a complete line of Edgers—hand, light, medium and heavy style—varying in size from 30 in. to 96 in. opening. No matter what stock you are handling, we have the Edgers—in style and size—most suitable for your work. Our Bulletins on Request.

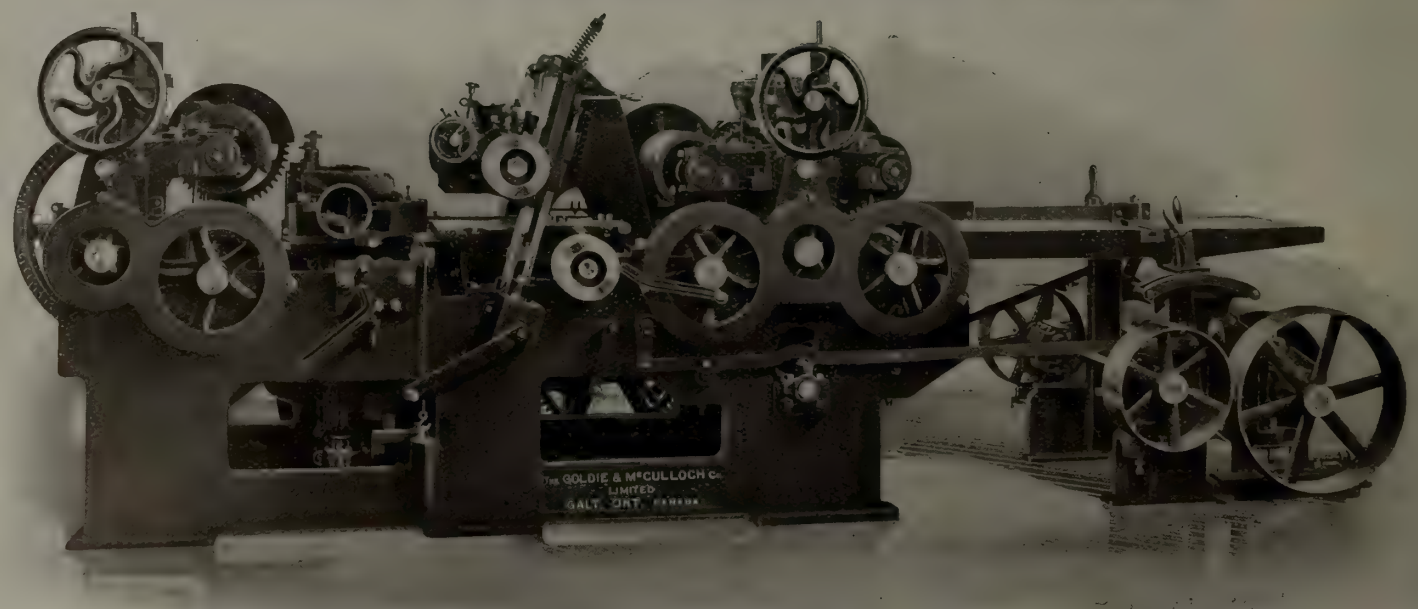
SIMONDS

Inserted Point Saws

Made in Montreal

Are you buying a new saw this winter? Then listen to what some other mill men say about the Simonds Saw. We quote from their letters. "As near perfection as one could be made for our mill." "Miles ahead of any other—would not take $100 in gold for it." "Our favorite saw in the mill." "First class, works fine." "Runs equally well winter or summer." "Your saws have proved the best I ever used." "It's the only saw I can get to stand up in frozen timber."

Some of our friends may be over enthusiastic, but there you have their own words. Isn't it enough to cause you to hesitate and learn more about the Simonds before buying any other make? Really he who uses this saw profits much more by it than do we in selling it. You have more to gain than we.



An attractive little booklet fully describing these saws can be obtained by addressing our nearest office.

TERMS OF SUBSCRIPTION:

Canada, United States and Great Britain, $2.00 per year, in advance; other foreign countries embraced in the General Postal Union, $3.00.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For Manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Vol. 30 Toronto, April, 15, 1910 No. 8

The Tariff Issue Settled

The settlement of the tariff issue between Canada and the United States will have a good effect upon the lumber industry in both countries The lumber industry was concerned in the issue more than any other. For more than a year the lumber industry has been retarded by the uncertainty prevailing about the tariff. In the first place the lumber business was depressed by many other causes a year and a half ago, when the United States opened up the tariff question with a view to drawing up a new tariff Act. All classes of industry were immediately affected by the uncertainty which resulted and which continued from that time until the passing of the Tariff Act on August 5th, 1909. It had been hoped that the passage of the Act would put an end to the uncertainty and clear the way for a gradual improvement in trade conditions, toward which a good crop and a general return of financial confidence were tending. But the tariff issue was only settled temporarily. A maximum clause gave the United States almost eight months longer in which to continue their investigations into the tariff affairs of foreign countries, so as to secure the best possible terms for their own exports. This apparently innocent provision was the cause of all the trouble, and had it not been for the inclination of Canada's Finance Minister to make concessions to the United States in return for a minimum tariff on Canadian imports, this provision might easily have led to a most embarrassing situation in United States politics. This, however, is now fortunately a matter of the past.

In Canada, opinion has been pretty well worked up. Political inclination has been allowed to influence calm judgment. It seems at present that, so far as Canadians are concerned, the success of Mr. Fielding's policy still remains to be proved. If Canada has made concessions to the United States in return for what is simply a reasonable attitude on their part, and is not to receive a fair return in the form of reciprocal trade relations with that country, Mr. Fielding's policy will be a failure. On the other hand, if the few concessions that have been made have really cleared the way for reciprocity, it may be that the course pursued by Mr. Fielding will go down into history as the first diplomatic success that Canadians have secured in their dealings with the United States.

There is one view of the situation which seems to have attracted very little attention but which deserves to be considered. Many explanations have been given for Mr. Fielding modifying his "stand pat" attitude. Little has been said of the influence of the banking institutions of the country and their part in the affair. It has been reported, however, that the banks brought pressure upon the Government in favor of adopting a conciliatory attitude towards the United States. It would not surprise any one if this had been the case. The banks were reported to fear the effect of a maximum tariff upon the large industries of Canada, especially the lumber industry. Some of the banks have very extensive interests in the lumber business and would naturally seek to avoid any interference with the lumber markets which might result in shrinkage in the value of their investments.

It is possible that such an argument was presented to the Government, yet it should not have been sufficient to persuade them to change their attitude. It would have been quite possible for the banks to have carried the lumberman over any temporary depression resulting from a tariff war. Canadian industry in general is on the eve of a great wave of prosperity. It could have survived a year or two of tariff war. In the end the United States would have been obliged to retreat from their untenable position. They need our products more than we need theirs, and they could ill afford to lose our extensive markets. Under a tariff war we should have become more self-reliant and the United States would have been benefited by a more forcible lesson in neighborliness than the mild warning with which they have escaped.

Taking the situation as it stands to-day, however, the lumber industry has nothing to complain about. The outlook for trade revival is excellent. During the past year and a half lumber stocks have been greatly reduced at producing and consuming points. The mills have a fair supply of logs to work on for the coming season, though there is no over-supply. Business in general is improving every day and with the tariff issue out of the way we can expect an improvement in demand and a continuation of good prices.

Serious Car Famine Threatened

The prospect of a car famine in the near future is commencing to loom up in a threatening manner. A year and a half ago it would have been quite a relief to the dulness of trade, to have been threatened with a shortage of cars, but to-day, when business is increasing rapidly and everything else is encouraging, it is a serious matter that business expansion should be checked by a lack of the means of transportation. With manufacturers turning out a great quantity of finished products and the consuming public anxious to buy these products, a great loss will be involved if the transportation link is incomplete.

This affords a problem which it is apparently very difficult under present conditions to solve. The whole situation was put in a nutshell, from the railway's point of view, in an interview which was given by J. J. Hill, who stated that he believed the railways would experience next fall and winter the greatest traffic congestion in their history. He saw no possible way of preventing it. "The tonnage which is being offered the railroads for transportation is constantly on the increase," he said, "and there is little doubt that the railroads will be called upon this year to furnish more transportation units than they have ever been asked to furnish. From all indications it seems certain that by next fall or early winter the railroads will be totally unable to furnish anything like the amount of transportation facilities which will be demanded by the country.

"I do not think that the railroads are to be blamed for this situation, for it is next to impossible for them to raise the money needed to provide the additional facilities. The railroads of the country really ought to have about $1,800,000,000 annually to spend for the next few years in order to catch up with the growing demands upon them, but it is a well known fact that they cannot get this money under present conditions. Until railroad credit shall have been restored and until the

American public shall have gained confidence in railroad securities, the public will have to continue to suffer for the lack of railroad facilities."

Mr. Hill's explanation of the matter makes it appear that those who have blamed the railways for not spending money enough in the equipment of rolling stock may have been barking up the wrong tree. If the railways have not capital enough and cannot gain the confidence of the money owning public, they must be content with what they have and the public must get along as best they can with the accommodation that is provided. These arguments, however, will not apply in all cases, and the public will be slow to take Mr. Hill's view of the situation. It may be the case in the United States that some of the railways cannot get credit enough to add to their rolling stock as many cars as the growing traffic demands. In Canada it is different. The great railways of Canada are not suffering from lack of credit. They are, if anything, suffering from too rapid an era of expansion, with which they cannot keep up. The credit of the Canadian roads is equal to almost anything in the form of maintaining an adequate supply of rolling stock. The great money markets of the world are wide open to them and will be quick to make advances to enable the railways to keep up with their increasing business. Only the speed of the country's expansion can be put forward as an excuse for failure on the part of the Canadian railways to avoid a car famine.

It is the part of wisdom for the merchants of Canada to be forewarned and forearmed in this matter. If there is to be a congestion of traffic next fall and winter, merchants can do a great deal to assist in reducing the ill effects. By the prompt unloading of cars and by the courteous consideration of the interests of the railways, they can reduce the congestion to a considerable extent. In many classes of business much can be done in the way of making shipments before the congestion comes about. Retail lumbermen fill save themselves both trouble and money by estimating in advance, as far as possible, the quantity of lumber they will need and putting their stocks in early.

Payment Against Documents by English Lumber Importers

Wherever lumber is sold, difficulties are sure to arise out of "terms of sale." The difficulties vary according to the different countries. In the British timber trade, for instance, the "terms of sale" give rise to a number of difficulties which are in a certain measure peculiar to so extensive an importing country and which frequently make the lot of the timber merchant far from pleasant. "Payment against documents," is a favorite form of transaction with exporters to the British markets. The English timber merchant gives to the consumer of lumber very long term credits and thus the merchant himself is ground between the upper and the nether mill stone. The "Timber Trades Journal," discussing the subject recently, said.

"Regarding many of the pitfalls which beset the path of the importer, we agree with the pessimist that nothing in the way of united action is to be expected; but on the general question of payment against documents we submit there is a crying need for reform, which would benefit timber importers of all descriptions. In an enormous number of cases shippers' agents demand cash or acceptance against documents, which means that payment is made in full before the importer gets an opportunity to inspect the goods. In the case of a cheque payable direct to shipper the money passes out of the country, and in any case, a difficult and unpleasant task presents itself, should it be found impossible to obtain payment of an award following arbitration. In the case of acceptances there is the extreme course of making payment into court in England, but this practice has much to be said against it by way of condemnation, and is further complicated when bills have passed into third hands.

At this stage of our little inquiry into this matter, we can imagine the shipper saying, 'Why don't you buy from good shippers,' and the broker adding, 'If you won't deal with brokers who are strong enough to see you through it serves you right.' (That has a very familiar ring and will be recognized as current in this country.) These contentions are all well and good, but if importers are to be virtually tied to buy through certain strong and wealthy brokers and from well established shippers of high reputation, it will be seen that herein lie elements of restriction and monopoly, which are very serious from the point of view of the shipper who is striving to establish a position in the trade and the smaller importer who has not the entree to the strong and wealthy broker. For without the reputation of the first class broker to ensure that arbitration awards are properly and honorably dealt with, payment against documents involves risks of no light nature. Firsts in a contract are not always firsts, or for that matter, seconds, in ship's holds; and as we have said, the only real protection against an unscrupulous shipper is the strength and reputation of his agent on this side. Legal proceedings in a foreign country, say Russia, for instance, are not a profitable side line in our trade, and shippers of the order who would deliberately load goods inferior to contracted quality have a way of equally deliberately disappearing up-country if the occasion be sufficiently profitable."

A suggestion is made by the "Timber Trades Journal" that to overcome these difficulties, a timber trade clearing house should be established, guaranteed by importers of reliable standing and supported by fees charged for the protection afforded. Contracts should be made payable so much per cent. against documents and the balance to be paid into the clearing house, to be held by that institution until the cargo or shipment is discharged and found according to contract. By this method the English importer would be insured that a reasonable portion of his money was being held as security against contravention of the contract, and that in case of a dispute and an award being made in his favor, he would get prompt and certain payment.

It is probable that the suggested method for payment in England would be better than that in vogue in some cases, viz., make payment of a certain percentage of the net invoice, retaining the balance as a guarantee against shortage in measure or poor quality in grade. It would place the disputed amount in the hands of an impartial mediator, to be paid by him to the purchaser or to the seller.

New Customs Regulation for Lumber Entering the United States

An order has been issued by the United States Treasury Department in connection with the measurement of lumber entering the United States, which is of the utmost interest to Canadian exporters, and which it is feared will give rise to a great deal of dissatisfaction inasmuch as it places a serious burden upon Canadian exporters. The order referred to requires that a tally sheet or specification shall be supplied in all cases for any kind of lumber exported to the United States on and after May 1st, 1910. This information is to be given to the Customs officer at the port of entry and should accompany the bill of lading.

The clause of the order dealing with the subject is as follows:

"On and after May 1st, 1910, officers will require importers to file upon entry of lumber imported by railway cars, a copy of the tally sheet showing the actual lading of each car, or, in lieu thereof, a specification of the number of pieces of each size and length of lumber laden thereon, and also showing whether such lumber is rough or planed, and if the latter, the number of sides so planed.

"Unless such tally or specification sheet is filed as above required all cars containing lumber should be unloaded and the quantity of lumber contained therein ascertained by a tally of the number of pieces and sizes thereof, to be made at the time of unloading."

The following letter, which was written to the collector of Customs at the port of Plattsburg, N.Y., from the Treasury Department, has reference to this matter: "The Treasury Department has instructed that in no instance should the expense of unloading and reloading of lumber be paid by the Government. It was learned that the cost of unloading and reloading of lumber imported in the railway cars and destined to points beyond the port is paid by the Government, unless a greater quantity was found upon measurement than stated in the invoice. This practice, which is understood to have also been in practice at Ogdensburg, N.Y., will be stopped by the new decision from the Treasury. The order in part reads as follows: "if you have good reason to believe that the quantity is intentionally mis-stated in the invoice with a desire to

avoid payment of the proper amount of duty, the expenses of weighing, gauging or measuring should be paid by the owner, the agent or the consignee."

It will be seen from the above report that Canadian exporters of lumber will be put to a serious inconvenience and to a considerable expense if the order, as issued, is strictly enforced. It would involve a great deal of trouble to provide a tally of the nature required, as much of the lumber exported is never tallied. Shorts and sidings of all widths and lengths are always estimated in a general manner, by the rule, and tallied in hundreds. If a car has to be unloaded and each of these pieces measured separately, it will be a great hindrance to trade. Possibly the Treasury Department does not intend that this class of lumber shall be measured in detail but that the higher grades only shall be subjected to such a tally, and it may be that they will accept a duplicate of the shipper's invoice, in all cases where they have no reason to suspect misstatements. If this is the case, no great harm would be done, but, as pointed out, if the order is enforced minutely it will impose a serious hardship upon Canadian exporters.

Editorial Short Lengths for Busy Readers

Let me tell you something, brothers. Go over your books and figure up the total of all the bad accounts that you have counted as lost and collected during the past year, and leave your business cares behind. Take your wife along and go out and have one devil of a good time. Enjoy yourself to the extent of your findings and I'll bet next year you try to collect up a better per cent. of your bills so you can have a still better time. Don't let a lot of dead beats get your good money; instead, you and your wife have a good time out of that amount. Get busy now, and go and have your frolic, and then you can enter into the season fresh as a morning glory.—The Lumber Doctor.

The St. Louis "Lumberman," dealing with the alterations in the timber license regulations in British Columbia, says: "It is interesting to learn that in British Columbia advanced ideas are being proposed and recommended by those who take the deepest interest in the subject of forest preservation. An interim report has recently been presented by the British Columbia Forestry Commission to the Government, some of the features of which will undoubtedly be well worthy the consideration of lumbermen generally, and particularly those who take an active interest in the forestry problems now being so widely discussed in all sections of this country."

The demand that odd and short lengths of lumber be accepted as standard in shipments of lumber originated on the American side of the line on the Pacific coast, just as did the demand for an increased import duty on Canadian shingles, says the "Lumberman's Review," which continuing, says: "It is a peculiar and interesting fact that since the duty on shingles was increased 20 cents per thousand the market for shingles has been weak and the selling price has been lower. In this odd and short lengths proposition the Pacific coast is vitally interested, for the coast mills have no adequate outlet in the form of box shooks for the accumulations of odd stuff at the mills. In addition to resulting in a material economic loss to the mill man, there is a failure to save the full product of the log for market uses, and to this extent there is room for application of modern conservation ideas. The odd and short lengths campaign has been started along right lines, and should slowly win its way toward general adoption.

The "American Forestry Journal" in a recent editorial commends the course of the Dominion of Canada and the provinces in the matter of preserving their forests. After discussing the various measures taken in Canada, it says: "The moral of all this is that, like all the rest of the civilized world, Canada is measuring her timber resources and preparing to protect them by progressive and drastic measures against exploitation for the benefit of wasteful foreign countries, including her next door neighbor. We cannot look to the north for our salvation. We must husband all our remaining resources and plant trees wherever they can be grown more profitably than other crops, in order that our own future may be assured. That is the only way. Canada has not the resources for her own needs and ours too, and she is sufficiently wide awake and intelligent to guard her own. The only way that our timber resources and Canada's can be made inexhaustible is by the application of the highest scientific knowledge and the broadest common sense."

A plan worthy of widespread consideration is that recently adopted by the mills of the Pacific northwest in the United States. They have formed what might be called an information bureau, through which all the plants in the organization are furnished with an honest statement of sales made in various districts, although the names of purchasers are withheld. This movement is a very wise one for all concerned. It is not at all in the nature of a combination to affect prices directly, since such would be illegal, but is a generally initiated action on the part of manufacturers who, when advised by their competitors of the exact prices received in any certain locality, would not allow themselves to be so short-sighted as to sell in that district at a lower price. The retailers will readily recognize the fact that this combined action will prove a veritable godsend to them in every way. The result, pre-eminent above all others, will be marked stability, so that retailers can purchase their stocks on a visible parity with their competitors and be reasonably certain that the market will not suddenly drop from beneath them, thus entailing serious losses, such as have occurred during the past year and more.

The importance of the movement for the establishing of lumber mutual insurance companies in the Untied States and the success which they have had since their establishment some twelve years ago is clearly illustrated by the report of the work for the past year. There are now four lumber mutual companies, viz.: The Lumbermen's Mutual Insurance Company of Mansfield, O.; the Pennsylvania Lumbermen's Mutual Fire Insurance Company, Philadelphia, Pa.; the Lumber Mutual Fire Insurance Company, Boston, Mass, and the Lumbermen's Mutual Insurance Company, of Indianapolis. On January 1, 1910, these companies presented in their combined statement the following figures: Insurance in force, $47,913,804; premiums in force, $1,117,383; cash assets, $1,729,874; cash surplus, $1,116,538. Since their organization these companies have paid to their policyholders: For dividends, $1,500,-183; for losses, $1,905,276; total, $3,405,459. These figures, satisfactory as they are, do not represent all the good which has been achieved for the lumber trade by combined mutual and lumber insuring companies. The competitive insurance facilities which they have afforded the lumbermen have materially brought down the rates of stock companies so that all members of the lumber trade, whether they are policyholders or not, have benefited.

Some of the United States paper trade publications have extracted a grain or two of comfort from the omission of any reference to the prohibition of the export of pulpwood, in the speech from the throne at the recent opening of the Quebec Legislature. They are ill-advised in this because Premier Gouin has already announced himself publicly as favoring prohibition of export. In speaking to the speech from the throne, moreover, he said that prohibition of the export of pulpwood was in the interest of the province. What he had said at the Montreal banquet upon the subject was not the last word to be expressed upon the question and the House would have an opportunity of studying the whole affair later.

It is scarcely fair for the United States interests to make such a howl about confiscation of the capital they have invested in Canadian pulpwood. They knew accurately, or should have known, the situation before investing. The United States have helped to create Canadian sentiment in favor of an export duty by their duty on paper. Moreover, the interests of Canada in its pulpwood resources may by many times more important than the investments of United States citizens. The talk about confiscation is not straightforward criticism. It is used simply to cloud the issue. If too much of it is not indulged in, it is possible that a solution may be found that in the end will do a great deal of good and very little harm.

The Forester's Value to the Lumberman

Third Article upon The Practical Application of Forestry Knowledge to Lumbering Operations—Estimating Contents and Growth of Trees — By Dr. B. E. Fernow

On April 21st, after the closing of the academic year, some 24 students of the Faculty of Forestry of the University of Toronto, with their instructors, will leave for four to five weeks practice work in the woods. This year, through the courtesy of the Georgian Bay Lumber Company, a logging camp, located close to rail on Nine-Mile lake, near Bala in Wood township, has been secured for this purpose. The situation is unique—a virgin forest of solid white pine, some 800 acres, close to rail within four hours' ride from Toronto.

It might interest the lumbermen's fraternity to know what precisely will be done by these eventual successors of theirs during this phase of their education. The work is done as far as practicable by schedule, as in the University, but, besides the scheduled work, every opportunity is used to become familiar with woods work of various kinds such as the surroundings offer. Unfortunately, logging operations have ceased by this time, but the drive is on and may be observed, the dams and other contrivances inspected, the location of tote roads and logging roads studied, and, while these men are not to become wood-choppers or lumberjacks, the opportunity of learning how to use axe and saw and how to fell trees properly, how to run logs, etc., is not neglected.

To make clear what the scheduled work is like, perhaps no better method can be adopted than to quote substantially from the report of one of the students on last year's work.

The location last year was as unique in another way as the present year's. It was secured at Franks Bay, Lake Nipissing, by the courtesy of J. B. Smith & Sons, who loaned their commodious depot, and of Mr. H. J. Bartlett, of the Strong Lumber Company, who offered their limits for a practice ground.

Here is found a virgin stand of practically pure Norway pine, which, as an investigation developed, was the result of a sweeping fire about 175 years before; as was ascertained from a study of the fire scars of a few of the older trees, which had remained and furnished seed to grow this magnificent stand. The most interesting first fact observed was that the ground was covered by a quite young regeneration of white pine, the seed coming from a few trees scattered over the area. This showed that the red pine cannot reproduce itself under its own shade if the stand is dense and that the white pine can endure that shade. This silvicultural fact immediately suggests the proper manner of working this tract, namely, to cut the whole area clean, leaving perhaps one well selected wind-firm seed tree per acre of red pine or white pine.

Mr. Bartlett had supposed that the trees of small diameter (say below 8-inch), were young trees, and that the proper policy would be to cut to a given diameter and let the "young" stuff grow on. As a matter of fact, these small diameter trees were found to be of about the same age as the larger sizes, having been kept in suppression by the latter. It was evident that they could not have "grown on" because they had too small crowns to be able to utilize the light advantageously if it were given to them; and that they would not have "grown on," because they would have unquestionably been thrown by the winds. Here, then, was a clear case where cutting to a diameter limit would be absolutely wrong; whereas the clearing and careful burning of the brush would establish a fine new growth of white pine with a small admixture of red pine.

The season was unfavorable for getting into camp; the ice becoming unsafe quite early and being slow to go out. After waiting for some time, it finally became necessary to walk out with packs the 26 miles from Powassan to Franks Bay, mostly without trail over rough rocky ground—no small endurance test for "green" hands, students and instructors, just from the city.

Along the route, attention was called to the different forest types as they were passed, and other matters of interest that presented themselves. The time of waiting in Powassan was improved by measuring off two quarter-mile distances, one on a road, the other in the woods, and each man pacing these several times to secure knowledge of his pacing; and in marching out, count was kept of paces to learn the distances in length and time, besides using pedometers.

Having got camp in shape in the forenoon of the day of arrival, the afternoon was devoted to what is called stump analysis, namely, counting rings on the stumps of cut trees to ascertain the approximate age of the stand. Some 22 stumps were counted. In addition, the age of some 30 young plants was ascertained in order to determine how many years ought to be added for the height of the stumps, and by plotting the results in a curve, it was found that to a stump height of 1 foot corresponds an age of 5 years; of 1.5 foot to 7; of 2 feet to 9; of 2.5 feet to 11; of 3 feet to 13 years.

Some time was then spent in estimating the heights, diameters and volumes of trees and then checking the estimates by various instruments of precision as well as by the more commonplace methods for determining heights, such as a jack-knife bent to 45 degrees and pacing to the tree, or by the peculiar method of the German forester, looking through his legs and moving forward and backward until just the top is seen, when the distance to the tree gives the height.

The next day, surveying practice was begun by locating a post on a concession line and running a side line for 1¼ miles by hand compass and graduated rope (not chain), setting stakes every 20 chains and sighting at right angles from these stakes to indicate where subsection lines for 40-acre lots should be run; each student getting a chance in shifts to perform each part of the operation, line trees helping to correct the sighting, and the end post the length of the line. Then staff compass and chain was substituted to check and correct the results of the first crude method, to complete a survey of a row of forties, and finally of a 400-acre plot, which was laid out by various methods and subdivided.

Later, each senior had a 40-acre plot assigned to him to work out the topography and a detail description.

For the purpose of establishing relationships between the age and height, age and diameter, age and volume, diameter and volume, and of determining the average taper for 16-foot logs, careful measurements and counts were made upon 25 well selected trees.

The result of this study is shown in the following table:

No. of Trees	Age.	H'ght.	Diameter inches at different log lengths							Total
			2 ft.	4½ ft.	18 ft.	34 ft.	50 ft.	66 ft.	82 ft.	cu. ft.
1	132	88	10.3	10.0	9.2	8.2	7.6	6.5	3.2	28.27
2	133	88	11.5	10.9	9.6	9.0	7.1	6.9	1.9	21.08
3	*	82	19.5	18.5	17.0	16.3	15.5	8.3	...	93.16
4	128	80	10.7	10.5	9.7	8.9	8.1	6.8	2.1	30.27
5	132	86	11.2	10.7	9.6	9.0	7.3	6.8	1.9	30.89
6	134	85	9.9	9.8	9.3	8.2	7.6	6.4	1.0	27.48
7	127	79	9.0	8.1	8.4	7.8	5.4	4.6	...	19.39
8	125	88	10.0	9.4	8.1	7.6	7.0	3.8	0.5	22.67
9	136	66	7.4	6.9	6.2	5.7	4.4	0.5	...	15.06
10	138	92	9.8	9.6	8.9	8.1	7.1	5.8	1.7	26.01
11	143	90	10.5	10.1	9.6	8.6	7.9	6.5	3.8	30.24
12	142	74	14.2	12.7	12.6	11.4	10.7	5.1	...	47.04
13	243	93	19.9	18.7	15.9	13.5	12.4	9.8	4.2	79.14
14	125	87	10.8	10.7	9.2	8.4	7.5	6.0	2.0	28.90
15	132	85	9.8	9.1	7.8	7.2	6.2	...	...	26.15
16	128	88	11.4	10.4	9.2	8.6	7.5	6.4	...	30.40
17	127	85	10.9	11.1	9.4	8.8	8.0	6.6	...	30.60
18	134	77	10.5	9.5	8.6	7.6	6.3	4.6	...	20.22
19	142	73	14.5	13.8	11.8	11.2	9.4	...	...	43.65
20	137	77	11.5	11.3	10.7	8.5	7.1	5.2	...	29.34
21	110	85	7.0	6.9	6.3	5.3	4.7	3.6	...	12.38
22	136	80	8.7	8.7	7.4	6.5	6.1	5.0	...	17.95
23	236	83	13.0	12.9	11.8	10.1	9.1	6.5	...	42.71
24	133	90	9.9	9.6	9.0	8.3	7.2	5.8	2.9	25.66
25	243	90	18.0	17.6	15.1	14.0	13.1	10.5	3.0	80.67

*Rotten butt.

These figures show that the first or butt logs have an average taper of nearly 2 inches, the second and third of approximately one inch, and the fourth two inches.

A study of seedling growth and of young trees up to 18 feet in height furnished some interesting information regarding the rate at which red pine grows in its early stages and, with the information in the above table, enabled the class to plot on cross-section paper a curve showing the average rate of growth. This curve shows that the average rate of growth was as follows:

Age, years	5	10	13	15	17	18	19	20	21
Height, feet	1	3	4	6	9	11	14	16	18
Aver. rate per year, inches	2.4	3.5	3.7	4.8	6.3	7.3	8.8	9.6	10.3

Starting slowly, the average annual height growth gradually increases until at the 25th year it is approximately a foot a year. After that the heights for the different decades are as follows:

Age, years	20	30	40	50	60	70	80	90	100	110	120
Height, feet	16	30	40	48	56	62	67	71	75	78	80

This shows that the height growth practically ceases at about 90 years of age. A curve showing the relation of age to volume, however, exhibits the fact that the volume of wood added each year keeps on quite uniformly for 30 or 40 years more. This result is confirmed by an analysis of the diameter growth, which shows that during the first 50 years of its life, the red pine made an average growth of one inch in six years, during the next 50 years one inch in 11 years, and during the period after 100 years at the rate of one inch in 36 years; thus corroborating data from other regions, that the red pine grows as well for the first 100 years as the white pine, but afterwards lags behind, and should be utilized before its slow growth period sets in.

These measurements, together with the stump countings of the first and later days, established the fact that, besides the few old trees over 250 years, the stand was remarkably even aged, ranging within 30

years, during which the seeding had taken place; and that the average age was 135 years; their average height 81 feet, and their average diameter 11 inches.
